Derivation method

```
git log --all --oneline -S "BOB-016" -- docs/Fixed.md | tail -1  
git log -1 --format=%cI "fa6fb4ffc97ba7c7567bbf56e46629c9d406f558"
```

The commit above is the OLDEST commit whose pickaxe on docs/Fixed.md first introduces the literal BOB-016, so it marks the moment the item transitioned into the closed archive. The commit’s own change may document the closure (renames, seed, sync, or explicit close).

Honest boundary (§11.4.6)

- Exact closure operator + timestamp are unrecoverable from pre-mandate history; by='AI' records the backfill agent, with AI-inferred documented in item_history.reason.
- This artefact fulfils the §11.4.146(D3) status-custody chain’s captured-evidence requirement for the backfilled row; it does NOT retroactively validate the ORIGINAL closure decision.
