BOB-149 closure evidence — 2026-09-22

Finding

BOB-149 (“Managed-plugin count diverges 43/42/48 across constitution, CLAUDE.md and the README badge”) is already resolved in the current working tree — fixed by prior commits 60729c9 and 9e443d0 (“fix(constitution,docs): ... refresh stale README/TESTING badges”) before this session started. The tracker entry (docs/Issues.md, Status: Queued) is stale relative to the codebase.

Independently re-verified this session by a dedicated subagent. Zero file edits were made (git diff --stat on every relevant file is empty).

Verification

Real count, control-needle verified against install-plugin.sh’s PLUGINS=() array (extraction validated by confirming known members "academictorrents", "rutracker", "yts" all present before trusting the count): **43 entries**.

Current state of the three previously-divergent locations: - .specify/memory/constitution.md:632 — “every managed plugin (43) — already correct. - CLAUDE.md:265 — “**43 search-plugin engines** ... ” — already correct. (The “42” the bug cites survives only as historical narrative at CLAUDE.md:260 documenting the bug itself, not a live claim.) - README.md:30 — badge reads plugins-43-blue (not 48); README.md:224 prose says “the 43 plugin engines” — already correct.

Remaining hits for the old wrong numbers (“42 managed plugin”, “plugins-48”) are all intentional: the gate scripts’ own “why this exists” commentary (scripts/pre_build/check_cm_plugin_count.sh), the constitution’s historical Sync Impact Report entry describing drift as of when it was authored, the bug report itself (docs/Issues.md), and golden-bad test fixtures that deliberately embed the wrong numbers to prove the gates catch them (tests/unit/test_compute_badges_carrier_match.sh, tests/pre_build/test_check_cm_plugin_count.sh). None of these are live, currently-wrong documentation claims.

Verification commands run (both PASS, exit 0)

```
$ bash scripts/pre_build/check_cm_plugin_count.sh -v
derived (control-needle proven):
  curated    43    (install-plugin.sh PLUGINS=() – the canonical
managed roster)
  bootstrap  12    (setup.sh PLUGINS=() – one-time-setup subset)
  engines    43    (distinct engine modules on disk)
  toplevel   35    (plugins/*.py – engines PLUS utility modules)
  recursive  68    (plugins/**/*.py – also counts per-dir
variants)

ok  CLAUDE.md: curated = 43
ok  CLAUDE.md: engines = 43
ok  CLAUDE.md: bootstrap = 12
ok  CLAUDE.md: toplevel = 35
ok  CLAUDE.md: recursive = 68
ok  docs/features/Status.md: curated = 43
ok  docs/features/Status.md: engines = 43
ok  docs/features/Status.md: toplevel = 35
PASS: CM-PLUGIN-COUNT – 8 documented count(s) match their
derivation
EXIT: 0

$ bash scripts/compute-badges.sh --check
compute-badges.sh --check: README badges are in sync with live
counts
EXIT: 0
```

git diff -stat

```
$ git diff --stat README.md CLAUDE.md .specify/memory/  
constitution.md docs/features/Status.md  
(empty – no output, zero changes)
```
