

closure_evidence_20260922

BOB-208 closure evidence — 2026-09-22

Fix

scripts/lib/ownership.sh probe_location(): want="\$
(ownership_operator_uid)" is now guarded — if ! want="\$
(ownership_operator_uid)" || [[-z "\${want}"]]; then echo
"unresolved-operator-uid"; return 1; fi — so a failing id(1) yields
an honest, distinct verdict naming the unresolved precondition instead
of a fabricated wrong-owner:<correct-uid> claim. Every consumer of
the verdict already refuses on any unrecognised string
(ownership_precondition.sh's case "\${verdict}" in ... *)
FAILURES+=(...)), so this still fails closed.

RED evidence (id shimmed to fail)

Pre-fix verdict: wrong-owner:1000 on a perfectly healthy location —
naming the CORRECT uid as wrong.

GREEN evidence

Post-fix verdict: unresolved-operator-uid.

Golden-FALSE

A healthy location with a working id still verdicts ok.

Independently re-verified this session

```
$ bash tests/unit/test_ownership_probe_location.sh
  PASS: sandbox: no stray probe files left directly under the
harness work dir
RESULT: 10 passed, 0 failed, 0 skipped
```

(Combined test file covering BOB-208 and BOB-209, since both live in the same probe_location() rewrite — see also docs/qa/BOB-209/closure_evidence_20260922.md.)

Also re-verified: tests/unit/test_ownership_repair.sh (146/146 pass, the full existing regression suite for the consuming script) and tests/pre_build/test_check_cm_ownership_invariants.sh (42/42 pass).

git diff –stat (shared across BOB-207/208/209/210/220/202, one combined change)

```
