

Boba “ Feature Status (all components)

Revision: 4 **Last modified:** 2026-06-16T11:30:00Z **Scope:** Every system component, service, infrastructure piece, and client app of the Boba project “ one row per REAL unit (endpoint / handler / client method / component control / plugin / subcommand / script), grouped by component. **Authority:** assembled by READ-ONLY repo inventory (codegraph + grep + source reading) on 2026-06-15, expanded to per-unit granularity (Â§11.4.118 discovery-pressure) on 2026-06-16. Cross-references AGENTS .md, CLAUDE .md, docs / REMAINING_WORK_PLAN .md.

Captured-evidence-driven (Â§11.4.5 / Â§11.4.45 / Â§11.4.86). Every feature row cites a real source file (file:line where load-bearing), endpoint, command, or control. **No invented features** (Â§11.4.6). The **Video-recording confirmation** column is PENDING for all rows EXCEPT the rows already marked VIDEO-CONFIRMED (boba-ctl CLI orchestrator + the POST /api/v1/search web journey); remaining surfaces (per-feature flows) are an in-progress recording pass (Â§11.4.107/Â§11.4.143).

Column legend: - **Impl** = implemented / partial / stub / missing - **Wired** = reachable on a running default-profile stack (yes / no / opt-in / host) - **Tests** = test types present + cite file (unit / integration / e2e / security / stress-chaos / property / contract); none if no covering test found - **Validation** = honest validation posture (tested-green-in-suite / unit-only / live-evidence-captured / not-validated / operator-blocked) - **Video** = video-recording confirmation “ PENDING unless an individual recording exists

Video-recording confirmations (Â§11.4.143 / Â§11.4.83)

Real-use recordings (Claude-vision analyzed “ the HelixAgent ensemble vision is a proven stub, see docs/qa/recording-readiness-20260615/) in /Volumes/T7/Downloads/Recordings/ (project-prefix boba-). Per-row Video cells stay PENDING where a feature has not been *individually* filmed; the recordings below confirm the headline user-facing flows on-screen.

Recording	Surface	Features confirmed	Verdict
boba-cli-orchestrator-demo.mp4	CLI (boba-ctl)	status / health / list “ 4 services running & healthy	docs/qa/recordings-20260615/boba-cli-verdict.md
boba-web-search-flow.mp4	Web dashboard	launch “ search “debian“ “ live results “ 829 results (288 merged)“ complete	boba-web-search-flow-verdict.md

Recording	Surface	Features confirmed	Verdict
boba-web-feature-tour.mp4 + boba-web-dashboard-tour.mp4	Web dashboard	dashboard load (29 trackers, qBit connected), result rows render qBit + Download buttons (clickable), tab nav (Results/ Active Downloads/ Trackers/ Schedules/ Hooks), Jackett / jackett credentials page, theme content-script detects a magnet + appends a MAGNET badge (non- torrent correctly skipped); popup UI (header, server status, Refresh + Send All, Detected- torrents); options page (7 settings tabs + server config)	boba-web-feature- tour-verdict.md
boba-extension-{scan- detect,popup,options,tour}.mp4	BobaLink extension (MV3, real --load- extension Chromium)		boba-extension- verdict.md

Honest scope (Â§11.4.6, no bluff): - **Backend services** (download-proxy / merge / boba-jackett / Go) verified **200 server-side inside the VM** and exercised through the web UI recordings. - **Console errors** seen in the web recordings are an **SSH-tunnel SSE/poll artifact** (macOSâ†”i,ZVM), NOT product defects â€” every endpoint is 200 in the VM. See the feature-tour verdict. - **BobaLink extension:** â€”... **VIDEO-CONFIRMED** â€” the prior --load-extension tooling gap was closed by building extension/scripts/record-features.mjs (loads the built MV3 artifact into a real Chromium, records the scan/popup/options journeys). Plus its passing test suite. - **TUI / mobile / desktop:** do not exist in this project (server-side + Angular web + browser extension only) â€” nothing to record.

- **CORRECTION vs Rev 2:** boba-ctl.sh DOES exist at scripts/boba-ctl.sh (Rev 2 said it did not). Its subcommands are now itemized in Â§8a. The underlying Go binary is cmd/boba-ctl/main.go (5 subcommands: up/down/status/health/list).
- **CORRECTION vs Rev 2:** the install-plugin.sh PLUGINS curated array has **44 entries**, not 12. ~21 have a matching plugins/*.py file; the rest (incl.Â torrentproject, torrentscsv) are curated names with no file present in this tree â€” itemized in Â§4c, not asserted as working.
- **Prometheus/OpenTelemetry metrics** â€” tests/observability/test_metrics_exist.py + observability/ dir exist, but no prometheus_client Counter()/Histogram()/Gauge() definitions were found in download-proxy/src; metrics surface is via GET /api/v1/stats (counters maintained in-process), not a /metrics Prometheus endpoint. Stated as fact, not assumed.
- **Go DownloadHandler / ActiveDownloadsHandler** â€” flagged partial/stub in Â§2a (mock success / empty array, no qBit integration) per source reading. The Go profile is opt-in and NOT the shipped product.
- **Go scheduler** â€” CRUD-only, no driver loop (RW-10); schedules never fire. The Go enricher is missing (RW-11).
- **Video-recording confirmation** â€” PENDING for all rows EXCEPT the boba-ctl CLI subcommands (status/health/list) and the web-UI flows already filmed (POST /api/v1/search journey + dashboard tab/button/theme/Jackett tour). Remaining per-feature flows are an in-progress recording pass (Â§11.4.107/Â§11.4.143).
