

PLUGIN_STATUS

qBittorrent Search Plugins - Status Report

Current Status: **35 PLUGINS**
INSTALLED

Container: Running at http://localhost:8085
Total Plugins: 35 plugins installed
Last Updated: April 12, 2025

Installed Plugins

Official qBittorrent Plugins (8)

Plugin	Type	 WebUI Support	 Desktop App	Status
EZTV	TV Shows	 Magnet		Working
Jackett	Meta Search	 Configurable		Working
LimeTorrents	General	 Magnet		Working
PirateBay	General	 Magnet		Working
SolidTorrents	General	Magnet		Working
TorLock	General	Magnet		Working
TorrentProject	General	Magnet		Working
TorrentsCSV	General	Magnet		Working

Public Trackers (19)

Plugin	Type	WebUI Support	Desktop App	Status
1337x	General	Magnet		Working
BT4G	General	Magnet		Working
BTSOW	Magnet Aggregator	Magnet		Working
ExtraTorrent	General	Magnet		Working
GamesTorrents	Games	Magnet		Working
GloTorrents	General	Magnet		Working
Kickass	General	Magnet		Working
Nyaa	Anime	Magnet		Working
RARBG Alternative	Movies/TV	Magnet		Working
RockBox	Music	Magnet		Working
Snowfl	Aggregator	Magnet		Working
TorrentDownload	Aggregator	Magnet		Working
TorrentFunk	General	Magnet		Working
TorrentGalaxy	General	Magnet		Working
TorrentKitty	Magnet Search	Magnet		Working
Tokyo Toshokan	Anime	Magnet		Working
YourBittorrent	General	Magnet		Working
YTS	Movies	Magnet		Working
AniLibra	Anime	Magnet		Working

Russian Trackers (6)

Plugin	Type	WebUI Support	Desktop App	Credentials Required
Rutor	General	Magnet		None
MegaPeer	General	Magnet		None
BitRu	General	Magnet		None
PC-Torrents	Games	Magnet		None
RuTracker	General	.torrent		Username/ Password
Kinozal	Movies/ TV	.torrent		Username/ Password

Private Trackers (2)

Plugin	Type	WebUI Support	Desktop App	Credentials Required
IPorrents	General	.torrent		Username/ Password
NNMClub	General	.torrent		Cookies

Specialized Trackers (4)

Plugin	Type	WebUI Support	Desktop App	Description
AcademicTorrents	Academic	Magnet		Research data
AudioBook Bay	Audiobooks	Magnet		Audiobooks
LinuxTracker	Linux	Magnet		Linux distros
Ali213	Games	Magnet		Chinese games
Pirateiro	Aggregator	Magnet		Multi-source
Xfsub	Anime Subs	Magnet		Anime subtitles
Yihua	General	Magnet		Chinese tracker

Plugin Categories Matrix

Category	Supported Plugins
Movies	PirateBay, 1337x, YTS, RARBG Alt, TorrentGalaxy, RuTracker, Kinozal, LimeTorrents, ExtraTorrent, GloTorrents, Kickass, YourBittorrent, TorrentFunk, SolidTorrents, TorLock, TorrentProject, IPTorrents
TV Shows	EZTV, PirateBay, 1337x, RARBG Alt, TorrentGalaxy, RuTracker, Kinozal, LimeTorrents, ExtraTorrent, GloTorrents, Kickass, YourBittorrent, TorrentFunk, SolidTorrents, TorLock, TorrentProject
Anime	Nyaa, Tokyo Toshokan, AniLibra, Xfsub, RuTracker
Games	GamesTorrents, PC-Torrents, RuTracker, Ali213, TorrentGalaxy, 1337x, LimeTorrents, ExtraTorrent, Kickass, SolidTorrents
Music	RockBox, RuTracker, TorrentGalaxy, 1337x, LimeTorrents, ExtraTorrent, GloTorrents, Kickass, YourBittorrent
Software	PirateBay, 1337x, LimeTorrents, ExtraTorrent, GloTorrents, Kickass, YourBittorrent, SolidTorrents, TorLock, TorrentProject
Books/Audiobooks	AudioBook Bay, RuTracker, TorrentGalaxy, LimeTorrents
Linux ISOs	LinuxTracker
Academic	AcademicTorrents

CRITICAL: WebUI vs Desktop App

The Problem

qBittorrent WebUI CANNOT download from private trackers that require authentication.

Why: - WebUI sends download URLs directly to `/api/v2/torrents/add` - It bypasses `nova2dl.py` which handles authentication - Private trackers (RuTracker, Kinozal, NNMClub, IPTorrents) require login to download .torrent files - Result: Downloads appear to start but never actually begin

Works: - Plugins returning **magnet links** (most public trackers) - Desktop App with all plugins

Doesn't Work: - Private trackers in WebUI (RuTracker, Kinozal, NNMClub, IPTorrents)

Recommended Usage

Use Case	Recommended Plugins
WebUI (Public Trackers)	PirateBay, 1337x, YTS, EZTV, TorrentGalaxy, RARBG Alt, LimeTorrents, SolidTorrents, TorLock, Nyaa, BTSOW, TorrentKitty
WebUI (Russian)	Rutor, MegaPeer, BitRu
Desktop App (All)	All 35 plugins
Movies	YTS, RARBG Alt, 1337x, TorrentGalaxy
TV Shows	EZTV, 1337x, TorrentGalaxy
Anime	Nyaa, Tokyo Toshokan, AniLibra
Games	GamesTorrents, PC-Torrents, 1337x
Music	RockBox, 1337x
Software	PirateBay, 1337x, SolidTorrents

Credential Configuration

Private Trackers Requiring Authentication

Tracker	Credential Type	Environment Variables
RuTracker	Username/Password	RUTRACKER_USERNAME, RUTRACKER_PASSWORD
Kinozal	Username/Password	KINOZAL_USERNAME, KINOZAL_PASSWORD
NNMClub	Cookies	NNMCLUB_COOKIES
IPTorrents	Username/Password	IPTORRENTS_USERNAME, IPTORRENTS_PASSWORD

Configuration File

Create .env file in project root:

```
# Private Tracker Credentials
RUTRACKER_USERNAME=your_username
RUTRACKER_PASSWORD=your_password
```

KINOZAL_USERNAME=your_username
KINOZAL_PASSWORD=your_password

NNMCLUB_COOKIES=phpbb2mysql_4_sid=xxx; phpbb2mysql_4_data=yyy

IPTORRENTS_USERNAME=your_username
IPTORRENTS_PASSWORD=your_password

Testing Each Plugin

Test via Command Line (nova2dl.py)

```
# Test RuTracker (requires credentials)
podman exec -u abc qbittorrent \
  python3 /config/qBittorrent/nova3/nova2dl.py \
  rutracker 'https://rutracker.org/forum/dl.php?t=6782121'

# Test Public tracker (magnet link, no auth needed)
podman exec -u abc qbittorrent \
  python3 /config/qBittorrent/nova3/nova2dl.py \
  piratebay 'magnet:?xt=urn:btih:...'
```

Test via WebUI

1. Open <http://localhost:8085>
2. Login with admin/admin
3. Go to **Search** → **Search Plugins**
4. Verify all 35 plugins are listed
5. Enable the plugins you want
6. Search for content
7. Check if download starts

Test via Desktop App

1. Install qBittorrent desktop application
 2. Install plugins locally:

```
./install-plugin.sh --local --all
```
 3. Restart desktop app
 4. Go to **View** → **Search Engine**
 5. Search and download - all plugins work!
-

Plugin Data Quality

All plugins return properly formatted data:

Field	Format	Example
name	String	"Ubuntu 22.04 LTS"
link	URL/Magnet	"magnet:?xt=urn:btih:..." or "https://..."
size	Bytes	"2377711616"
seeds	Integer	"25"
leech	Integer	"3"
engine_url	URL	"https://rutracker.org"
desc_link	URL	"https://rutracker.org/forum/viewtopic.php?t=12345"
pub_date	Unix timestamp	"1647261600"

Verification: Run `python3 tests/test_all_plugins_extended.py` to verify all fields.

Quick Commands

View all installed plugins

```
podman exec qbittorrent ls /config/qBittorrent/nova3/engines/*.py  
| wc -l
```

Check container logs

```
podman logs -f qbittorrent
```

Restart container

```
podman restart qbittorrent
```

Run all tests

```
python3 tests/test_all_plugins_extended.py
```

Test new plugins only

```
python3 tests/test_new_plugins.py
```

Verify plugin installation

```
./install-plugin.sh --verify
```

Install all plugins locally

```
./install-plugin.sh --local --all
```

Troubleshooting

Issue: Plugin not showing in WebUI

Solution:

```
# Restart container
podman restart qbittorrent

# Hard refresh browser (Ctrl+Shift+R)
```

Issue: Search returns no results

Solution: - Check internet connection - Some plugins may be blocked (try VPN) - Check container logs: `podman logs qbittorrent` - Verify site is accessible from your location

Issue: Download doesn't start (private trackers)

This is expected! Use one of these solutions: 1. Use Desktop App instead of WebUI 2. Use magnet-link plugins (most public trackers) 3. Download .torrent manually and upload

Issue: Credentials not working

Solution:

```
# Check .env file
cat .env

# Verify credentials work on website
# Restart container after changing credentials
podman restart qbittorrent
```

Issue: 1337x/YTS not working

Solution: - These sites may block some IPs/countries - Try using a VPN - Check if site domain has changed

Summary

35 plugins installed and working

All plugins return proper data (seeds, peers, sizes)

29 plugins work with WebUI (magnet link based)

4 plugins require Desktop App (private trackers with auth)

All plugins tested and verified

Recommendation: Use WebUI for public trackers (PirateBay, 1337x, YTS, etc.) and Desktop App for private trackers (RuTracker, Kinozal, NNMClub, IPTorrents).

Last Verified: April 12, 2025

Merge Search Service

NEW: A merged search service that aggregates results from all trackers.

Service Status

Component	Status	Port
FastAPI Server	Running	8086
Download Proxy	Running	8085
qBittorrent WebUI	Running	8085

Features

- **Unified Search:** Searches all 35+ plugins simultaneously
- **Smart Deduplication:** Merges identical torrents by infohash, name+size, or fuzzy matching
- **Real-time Streaming:** SSE updates every 500ms
- **Metadata Enrichment:** OMDb, TMDB, TVMaze, AniList, MusicBrainz, OpenLibrary
- **Tracker Health:** Validates trackers via HTTP/UDP scrape
- **Event Hooks:** Execute custom scripts on search/download events
- **Scheduling:** Automated recurring searches with persistence
- **Web Dashboard:** UI at `/config/download-proxy/src/ui/templates/dashboard.html`

API Endpoints

POST `/api/v1/search` - Execute merged search
GET `/api/v1/search/stream/{id}` - Stream results (SSE)

GET /api/v1/search/{id} - Get search status
GET /api/v1/downloads/active - Active downloads
GET /api/v1/hooks - List hooks
POST /api/v1/hooks - Register hook
GET /health - Health check

Usage Example

Search across all trackers

```
curl -X POST http://localhost:8086/api/v1/search \  
  -H "Content-Type: application/json" \  
  -d '{"query": "Ubuntu 22.04", "limit": 50}'
```

Stream results

```
curl -N http://localhost:8086/api/v1/search/stream/{search_id}
```

Configuration

Set in .env: - OMDB_API_KEY - OMDb API key (free at omdbapi.com) -

TMDB_API_KEY - TMDB API key (free at themoviedb.org) -

ANILIST_CLIENT_ID - AniList client ID (optional)

Container: qbittorrent (Running)

WebUI: <http://localhost:8085>

Credentials: admin / admin
