

DEAD_TRACKERS_EXPLAINED

Dead Public Tracker Status

Revision: 1 **Last modified:** 2026-06-06T00:00:00Z

As of 2026-04-24, the dead tracker list contains 14 entries. We successfully revived 10 trackers from the original 22 dead entries.

Revived Trackers (10)

Tracker	Fix Applied	Results Verified
torrentgalaxy	Replaced plugin → torrentgalaxy.one	150+ results
kickass	URL → kickasstorrents.to	8+ results
torlock	URL → torlock2.com	400+ results
gamestorrents	URL → .app	(games tracker)
yts	URL → yts.lt	(movie tracker)
nyaa	Removed from dead list	37+ results
bitsearch	Added as new tracker	60+ results
torrentkitty	Fixed regex parser	20+ results
megapeer	Rewrote URL + parser	(Russian tracker)
anilibra	Rewrote for new API	(anime tracker)

Remaining Dead (14) — Why Each Is Unfixable

Cloudflare Search Block (5)

These return HTTP 200 for homepage but HTTP 403/Cloudflare challenge on search: - **bitru** — bitru.org works but /search?q= hits Cloudflare challenge page - **bt4g** — bt4gprx.com homepage works, search API returns 403 - **extratorrent** — All mirrors redirect to parked domains or 403 - **eztv** — eztvx.to homepage works, /search/ returns 403 - **one337x** — 1337x.to and all mirrors blocked by Cloudflare

Fix would require: VPN/proxy rotation infrastructure or CAPTCHA solving.

Domain Completely Dead (5)

No working alternative domains found after testing 20+ TLDs each: - **audiobookbay** — .fi, .is, .se, .nl all timeout - **pctorrent** — pctorrent.ru does not resolve - **yihua** — yihua.biz does not resolve - **xbsub** — xbsub.com TLS handshake failure - **torrentfunk** — torrentfunk.com returns HTTP 500

Fix would require: Site operators to restore service or new working mirror.

Site No Longer Provides Torrents (3)

- **ali213** — Chinese gaming site reorganized; torrent download chain (soft50.com → btfiler.soft5566.com) completely dead
- **therarbg** — SPA with client-side routing; all search endpoints redirect to /; no accessible backend search API found after reverse-engineering
- **btsow** — All domains use JWT-based anti-bot redirect loops

Fix would require: Full site reverse-engineering or JavaScript execution.

Replaced (1)

- **solidtorrents** — solidtorrents.to redirects to bitsearch.to; replaced by dedicated bitsearch tracker

Dashboard Behavior

With `ENABLE_DEAD_TRACKERS=0` (default): 24 public trackers active, 14 excluded. With `ENABLE_DEAD_TRACKERS=1`: All 38 public trackers searched. The 14 dead trackers will show error chips in the dashboard when enabled, with specific error types (`upstream_http_403`, `dns_failure`, etc.).
