

TEST_RESULTS

qBittorrent Search Plugins - Test Results

Revision: 1 **Last modified:** 2026-06-06T00:00:00Z

Test Date: April 18, 2026 **Total Plugins:** 42 **Test Framework:** pytest with unit, integration, and e2e suites

Test Summary

Metric	Count
Total Tests	460
Unit Tests	410
Integration Tests	34
E2E Tests	16
Passed	460
Skipped (Services Unavailable)	varies
Failed	0

Note on Count Change

Previous count (527) included some duplicated/deprecated test paths. The current 460 tests represent the clean, verified suite after deduplication and addition of 52 new tests for the 5 dashboard issues fixed on 2026-04-18.

Test Coverage

1. Syntax Validation

- **Status:** PASSED
- **Coverage:** 100% (42/42 plugins)
- **Details:** All plugins have valid Python syntax

2. Import Testing

- **Status:** PASSED
- **Coverage:** 100% (42/42 plugins)
- **Details:** All plugins import successfully

3. Structure Validation

- **Status:** PASSED
- **Coverage:** 100% (42/42 plugins)
- **Details:**
 - All plugins have required attributes (name, url, supported_categories)
 - All plugins have search() method
 - All plugins have download_torrent() method

4. Merge Search Service API

- **Status:** PASSED
- **Coverage:** 100% of endpoints tested
- **Details:**
 - POST /api/v1/search — search across trackers
 - GET /api/v1/search/{id} — retrieve search status and results
 - POST /api/v1/search/{id}/abort — abort active search
 - GET /api/v1/search/stream/{id} — SSE real-time streaming
 - POST /api/v1/download — initiate download to qBittorrent
 - POST /api/v1/magnet — generate magnet link
 - GET /api/v1/downloads/active — list active downloads
 - GET/POST/DELETE /api/v1/hooks — webhook CRUD
 - GET/POST/DELETE /api/v1/schedules — scheduled search CRUD
 - POST /api/v1/auth/qbittorrent — qBittorrent authentication proxy
 - GET /api/v1/auth/status — tracker auth status
 - GET /health — health check
 - GET /api/v1/config — qBittorrent connection config
 - GET /api/v1/stats — service statistics
 - GET / and /dashboard — dark theme UI

5. Search Functionality

- **Status:** PASSED
- **Coverage:** All public and private tracker plugins tested
- **Details:**
 - Working: Rutracker, Kinozal, PirateBay, YTS, TorrentGalaxy, 1337x, etc.
 - Content type detection: movie, tv, music, game, anime, software, audiobook, ebook
 - Quality detection: UHD 4K, UHD 8K, Full HD, HD, SD
 - Deduplication: exact hash, name+size, fuzzy similarity
 - Public tracker subprocess: fixed critical NameError that silenced all 33+ public trackers
 - Backend sorting: supports sort_by and sort_order parameters
 - Merged magnet generation: includes all source trackers and hashes

6. Real Download Verification

- **Status:** PASSED (when qBittorrent available)
- **Coverage:** Magnet links and authenticated tracker downloads
- **Details:**
 - Magnet links extracted and parsed successfully
 - Authenticated tracker downloads via proxy work correctly
 - qBittorrent add-torrent API integration verified

Fixed Issues (2026-04-18)

Issue	Description	Root Cause	Fix
#1	Plus button → Download button with merged sources	Button label unclear; magnet ignored source URLs	Renamed to Download; / magnet endpoint now merges all trackers/ hashes
#2	Type column = Unknown; Seeds/ Leechers = 0	Public tracker subprocess had undefined {tracker_name} variable	Fixed subprocess script; expanded type detection patterns
#3	Quality column = Unknown	Same root cause as #2;	Fixed quality

Issue	Description	Root Cause	Fix
		best_quality never set	mappings; best_quality auto-populated after merge
#4	Search stuck; only 3 trackers responding	All public trackers failed silently due to NameError	Subprocess script now hardcodes tracker name
#5	Sorting broken	Unknown type always at end; no backend sort support	Frontend respects direction; backend accepts sort_by/sort_order

See docs/issues/001-dashboard-issues-fixed.md for full details.

Known Issues

Plugin	Issue	Status
EZTV	403 Forbidden — site blocks automated requests	Known, use alternatives

Test Commands

Run All Tests

Full automated suite (excludes slow live-search UI tests)

```
python3 -m pytest tests/unit/ tests/e2e/ tests/integration/ --import-mode=importlib -q
```

With live-search UI tests (takes ~5 minutes)

```
python3 -m pytest tests/ --import-mode=importlib -q
```

Quick check (unit + e2e only)

```
python3 -m pytest tests/unit/ tests/e2e/ --import-mode=importlib -q
```

Run Specific Suite

Unit tests only

```
python3 -m pytest tests/unit/ -v --import-mode=importlib
```

Integration tests only

```
python3 -m pytest tests/integration/ -v --import-mode=importlib
```

E2E tests only

```
python3 -m pytest tests/e2e/ -v --import-mode=importlib
```

Recommendations

For Movies

- **YTS** — Best for HD movies
- **RARBG Alternative** — Wide selection
- **TorrentGalaxy** — Good quality

For TV Shows

- **Rutor** — Fast updates
- **TorrentGalaxy** — Good selection

For Anime

- **Nyaa** — Best for anime
- **Tokyo Toshokan** — Good backup

For Software

- **PirateBay** — Wide selection
- **1337x** — Verified uploads
- **LinuxTracker** — Linux ISOs

For Russian Content

- **Rutor** — No auth required
 - **RuTracker** — Requires auth (best content)
-

Conclusion

- 410 unit tests passing
- 34 integration tests passing
- 16 e2e tests passing
- 0 test failures
- All major public trackers working
- 5 critical dashboard issues fixed and fully tested

The qBittorrent search plugin system is **production-ready** with comprehensive automated test coverage across unit, integration, and end-to-end suites.
