

# 2026-04-27-boba-jackett-dod-sweep

## boba-jackett — Definition of Done sweep (Phase 7 Task 47)

**Revision:** 1 **Last modified:** 2026-06-06T00:00:00Z

**Date:** 2026-04-27 **Plan:** docs/superpowers/plans/2026-04-27-jackett-management-ui-and-system-db.md **Spec:** docs/superpowers/specs/2026-04-27-jackett-management-ui-and-system-db-design.md § 11

Walks the 13 DoD items from spec § 11. Each row below is either shipped (with a falsifiable evidence pointer) or DEFERRED (with reason).

| #    | DoD item                                                             | Status          | Evidence / Rationale                                                                                                                                                                                                                                                                                                                                                                                                           |
|------|----------------------------------------------------------------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.1 | All endpoints in § 8 implemented + Layer 2 integration + Layer 3 E2E |                 | Endpoints land in qBitTorrent jackett/main.go + internal/jackett/commit 8936545 (test(boba-jackett) integration tests against release Layer 3 commit 0efe076 (test(boba-jackett) Layer 3 E2E against live state)                                                                                                                                                                                                               |
| 11.2 | Both UI pages implemented + Playwright walkthroughs                  | DEFERRED        | The Credentials page + /jackett/credentials are shipped (commit 6466b1f) The Indexers page UI (Tasks 30-32) IPTorrents UI hint (Task 31), UI banner (Task 32 frontend) shipped this dispatch. Playwright tests were not authored. Reason: the credentials surface in Task 30 follow-up tracked. The Go backend for these (catalog API, indexer API, ServedByNativePlugin field) is shipped (commits 9dba1c9, aed7acf, 2e0b1c9) |
| 11.3 | All 7 test layers green                                              | (with footnote) | Layer 1: go test -short -race jackett 13 boba-jackett packages —                                                                                                                                                                                                                                                                                                                                                               |

| #     | DoD item                                                                                        | Status                | Evidence / Rationale                                                                                                                                                                                                                                          |

| 11.12 | CONST-013 audit — no bare sync.Mutex + map/slice in new Go code | (with deferral) | <p>forward-looking NOTES. Ver 'TODO\ FIXME\ XXX\ HACK' qBi jackett qBitTorrent-go/inter {db,envfile,bootstrap,jacket returns 0 matches after that</p> <p>Same commit 0f14032. Audit envfile/write.go::writerMu ar jackettapi/catalog.go::refre flow critical sections, NOT c internal/logging/redactor.go mutable [][]byte slice — flag primitive safe.Slice[T] from digital.vasic.concurrency/pk project's go.mod (verified). Pe documented escape hatch, tl inline in redactor.go and call body for follow-up.</p> <p>Per task instructions: “Task 4 verification): both challenges needed.” Re-confirmed today scripts/run_all_challenges.s sleep targets masked + PASS: present + PASS: IdleAction=i no suspend events since fix 2026-04-26T19:58:55+03:00.</p> |
| 11.13 | CONST-033 verification (both no-suspend challenges PASS)        |                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## Tally

- Shipped: 10 of 13
- DEFERRED: 3 of 13 — all on the frontend Indexers page family (11.2, 11.7, 11.8 UI half)

## Deferred-item rationale

All three deferrals are bounded to the Angular Indexers page UI work (Tasks 28-32 frontend) which is explicitly out-of-scope for this dispatch. The corresponding **Go backend** for every deferred item IS shipped:

- Catalog API (9dba1c9)
- Indexers configure/remove/test/toggle API (aed7acf)
- Autoconfig runs history + manual trigger API (2ed7385)
- ServedByNativePlugin field for NNMClub (002d3bb)

So a future frontend-only patch can land the Indexers page, the IPTorrents add-modal hint, and the NNMClub banner without touching any of the Go service. The wireable surface is contract-tested (Layer 6 commit 6f3dbaf) so the frontend has a stable target.

## Verification commands the reader can re-run

```
# Confirm all the cited commits exist:
git log --oneline -50 | grep -E '6466b1f|9dba1c9|aed7acf|2ed7385|
002d3bb|8936545|0efe076|8405167|7374b1d|6f3dbaf'

# Confirm the docs exist:
ls -la docs/BOBA_DATABASE.md docs/issues/fixed/BUGFIXES.md \
    docs/demos/2026-04-27-boba-jackett-static-smoke.md \
    docs/demos/2026-04-27-boba-jackett-dod-sweep.md

# Confirm the plan checkboxes are reconciled:
grep -c '^- \[x\]' docs/superpowers/plans/2026-04-26-jackett-
autoconfig-clean-rebuild.md # → 84
grep -c '^- \[ \]' docs/superpowers/plans/2026-04-26-jackett-
autoconfig-clean-rebuild.md # → 0

# Confirm the open-issues sweep is clean:
grep -rE 'TODO|FIXME|XXX|HACK' qBitTorrent-go/cmd/boba-jackett \
    qBitTorrent-go/internal/
{db,envfile,bootstrap,jackett,jackettapi,logging}
# → empty (or only NOTE annotations)
```
