

BOB-079-attributed-auto-commit-history

BOB-079 — Attributed history notes for the Auto-commit / sync: population (v1.0.0-rc..HEAD)

Revision: 1 **Last modified:** 2026-08-21T19:39:37Z **Status:** documentation note (§11.4.113 — never a history rewrite; this record supplements published history, it does not touch it) **Item:** BOB-079 — RD2-12: “Retroactive attributed history notes for GA-18/21/22/25/26/27 changes (never rewrite published history)”

Purpose

docs/GOVERNANCE_AUDIT_2026-08-08_ROUND2.md (RD2-00, P0) established that a recurring class of commit — bare Auto-commit and templated sync: ... subjects, carrying no ATM-NNN/BOB-NNN or task/PR reference — has been landing in this repository via a git pull fast-forward from a second host, bypassing §2 (mandated commit wrapper), §11.4.43 (TDD-fix), §11.4.92 (5-pass evaluation), §11.4.125/§11.4.142/§11.4.194/§11.4.209 (mandatory independent Fable-xhigh review), and §11.4.234 (dedicated hook-validation script). RD2-12 (this item, BOB-079) asks for a documentation/changelog note — **not** a history rewrite — that gives each such commit a real, evidenced attribution: what it actually changed, and which tracked item or work stream (if any) it can be shown to belong to.

This note is that record. Per §11.4.113 no commit referenced below was amended, rebased, or force-pushed; every fact here was derived by reading the commit’s own diff (never its subject line, which is precisely what is missing) and cross-checking

against the project's own tracked documents, following the §11.4.124 investigate-before-attribute pattern (git history is FACT, "probably belongs to X" is a guess and is forbidden per §11.4.6).

Method

1. The population was enumerated with the project's own guard, `scripts/hooks/unattributed-commit-guard.sh` (built for BOB-068/RD2-00; not modified by this item), run with no arguments so it scans `<last-reachable-tag>..HEAD` — its real, documented default behaviour. The guard's full verbatim output is pasted in the next section.
2. For every flagged SHA: `git show -s --format='...' for date/author/parents/subject/body`, `git show --stat --format='' for the full file list`, and `git show -- <path> / git diff -- submodule=log <sha>^ <sha>` for the actual content diff of every changed file (including gitlink/submodule-pointer moves) — never the subject line, which carries no information here.
3. Where a diff itself cites a governance-finding id (a GA-NNN / RD2-NNN code-comment, e.g. `# GA-11: ...`) that citation is treated as evidence and reported as such, with the file/line it came from. Where a diff or its cross-referenced doc (`GOVERNANCE_AUDIT_2026-08-08_ROUND2.md`) independently names the commit's short SHA, that is likewise reported as evidence, not inference.
4. Where no such citation exists anywhere in the commit (diff, commit body, or a tracked doc that names the SHA), the owning item/work-stream is recorded literally as **UNKNOWN** — the change itself is still described in full from the diff, but no ticket is guessed onto it. Per §11.4.6 this is intentional: a fabricated attribution is worse than an absent one because it looks authoritative.
5. The project's `docs/workable_items.db` was queried (read-only SELECT, never a write — writes to that DB are out of this item's scope and belong to the reporting/workable-items tooling only) for any existing tracked item whose body already names one of the GA-NNN/RD2-NNN ids found in step 3, to check whether a BOB-NNN placeholder already exists for that specific finding. None does beyond BOB-079/BOB-080 themselves (see the per-commit table).

Guard output (verbatim, this session)

```
$ bash scripts/hooks/unattributed-commit-guard.sh
[unattributed-commit-guard] scanning v1.0.0-rc..HEAD (last known-good release: v1.0.0-rc)
```

14 commit(s) in v1.0.0-rc..HEAD match a closed bare/templated
pattern with no ATM-NNN or task/PR reference. Per BOB-068
(RD2-00)
these land via git pull fast-forward from a second session/host
—
investigate the source before amending history (§11.4.113: no
force-push / no history rewrite; land a documented, attributed
follow-up commit instead).

v1.0.0-rc was tagged 2026-06-11T07:28:22+05:00 (69daf870) and
is a real ancestor of the current HEAD (0fdc9193,
2026-08-21T20:39:38+02:00, branch 002-user-owned-downloads) —
verified with git merge-base --is-ancestor v1.0.0-rc HEAD. The
population above is therefore the complete, real set the guard's
documented default range produces today; it was not hand-
filtered.

Per-commit attribution

Chronological, oldest first. “Evidence” column states exactly what was read to produce the row; “Owning item / finding” is either a cited id (with its source) or the literal UNKNOWN.

cdb555f3 — 2026-06-28T00:22:45+03:00 — Milos Vasic

Subject: sync: auto-commit before cross-host sync 20260628 **Files (2):** .codegraph/.gitignore (-16 net), constitution (submodule pointer bump) **Evidence:** git show --stat, git show -- .codegraph/.gitignore, git diff --submodule=log. **What it did:** trims .codegraph/.gitignore from 26 to a shorter pattern set, and advances the constitution submodule pointer by one commit. **Owning item / finding:** UNKNOWN by ticket. Process-attributed by GOVERNANCE_AUDIT_2026-08-08_ROUND2.md (its RD2-00 finding, reflog analysis) as the **named precedent** for the cross-host sync mechanism this whole population belongs to — this commit and its child 55b8671 are the June instance the audit explicitly cites as evidence the mechanism is “a known-but-under-labeled operational sync script running on a second host,” not an unknown process. No BOB-NNN/ATM-NNN exists for the underlying content change itself.

55b86718 — 2026-06-28T01:03:00+03:00 — Милош Васић

Subject: sync: post-rsync commit 20260628 **Files (3):** qBitTorrent-go/internal/api/api_test.go, qBitTorrent-go/internal/api/search.go, qBitTorrent-go/internal/service/merge_search.go (28 insertions / 18 deletions) **Evidence:** git show --stat, git show -- <each path>. **What it did:** a real Go source change to the merge-search service + its search API + the corresponding test file — not documentation or config only. **Owning item / finding:** UNKNOWN. No ticket/GA/RD2 id anywhere in the diff or body. Same cross-host rsync mechanism as cdb555f3 per the audit’s reflog-based process attribution above.

1108fc12 — 2026-06-15T18:52:41+03:00 — Milos Vasic

Subject: Auto-commit **Files (10):** 8 .playwright-mcp/page-2026-06-14T*.yaml accessibility-tree captures + qa-buttons-multixt-magnet-BEFORE.png + qa-buttons-singlext-magnet-AFTER.png (31,278 insertions, all additions) **Evidence:** git show --stat, git diff-tree --name-only. **What it did:** commits a Playwright MCP browser-automation session’s raw page-snapshot YAML captures and two before/after screenshots, named for a “multi-torrent-

extension vs single-torrent-extension magnet button” comparison — a QA/manual-testing session’s raw artefacts, landed wholesale with no accompanying doc, test, or ticket reference. **Owning item / finding:** UNKNOWN. The filenames self-describe the QA scenario (multixt vs singlext magnet button behaviour) but cite no BOB-NNN/ATM-NNN, and no tracked item in docs/workable_items.db was found whose body names this scenario.

0d05ec14 — 2026-08-07T21:52:05+03:00 — Милош Васић

Subject: Auto-commit **Files (1):** constitution (submodule pointer, 212b883 → 4ab25f5) **Evidence:** git show --stat, git diff --submodule=log 0d05ec14^ 0d05ec14. **What it did:** a pure constitution-submodule pointer advance, one commit forward, no other file touched. **Owning item / finding:** UNKNOWN. No content beyond the pointer move; nothing in the constitution submodule’s own log line (git diff --submodule=log) names a boba-side ticket.

54e313fa — 2026-08-08T11:18:51+03:00 — Милош Васић

Subject: Auto-commit **Files (26):** .gitignore, CLAUDE.md, README.md, 6× challenges/helixqa-banks/*.yaml, challenges/scripts/jackett_autoconfig_clean_slate.sh, docs/CONTINUATION.md, docs/GOVERNANCE_AUDIT_2026-08-07.md (new, 392 lines), docs/PORTING-FROM-LAVA.md, docs/REMAINING_WORK_PLAN.md, docs/TESTING.md, docs/incidents/2026-08-07-const033-poweroff-signal-triage.md (new, 230 lines), docs/workable_items.db (binary), extension/package-lock.json, extension/tests/unit/torrent-file.test.ts, pyproject.toml, scripts/host-power-management/check-no-suspend-calls.sh, start.sh (+128/-...), and 4 test-file deletions under tests/{contract,e2e,integration,security}/. **Evidence:** git show --stat (26-file list read in full) cross-checked against docs/GOVERNANCE_AUDIT_2026-08-08_ROUND2.md lines 271-330, which independently and explicitly names this bundle by content, not by SHA, as the carrier of six findings, and separately (line 159-ish) as the single commit RD2-00’s relog analysis traces to this host. **Owning item / finding — EVIDENCE-BACKED, six findings named by the audit doc itself:** - **GA-18** (7 dead jackett-autoconfig test bodies removed — one file deleted entirely, three others’ skip-only bodies stripped) — the four test-file deletions in the file list above. - **GA-21** (jackett_autoconfig_clean_slate.sh retired-endpoint fix, now polling the Go :7189 /api/v1/jackett/autoconfig/runs API) — confirmed present: this file carries a header comment citing “GA-21, 2026-08-08” per the audit’s own re-read. - **GA-22** (6 HelixQA bank dangling symlinks fixed) — the 6 challenges/helixqa-banks/*.yaml entries in the file list, each now a resolving relative symlink per the audit’s re-verification. - **GA-25** (CONST-033 real-signal triage) — docs/incidents/2026-08-07-

const033-poweroff-signal-triage.md, the new 230-line file in this bundle; content correctness independently confirmed by the audit (uptime cross-check, kernel-signal grep, both CONST-033 challenges re-run). - **GA-26** (ruff submodules/containers/ exclusion) — pyproject.toml's extend-exclude list; the audit independently re-ran ruff check . and confirmed 0 violations. - **GA-27** (Hard Stop #3 start.sh subcommands — reload_python/reload_plugins/ recreate_stack) — the start.sh (+128 line) hunk in this bundle; the audit separately notes this landed with zero test coverage (grep -rln ... tests/ challenges/ → zero hits at the time), which is why BOB-089 (RD2-24) exists as the follow-up and is already Completed (→ Fixed.md) in docs/workable_items.db.

The audit's own verdict for all six is **DONE-BUT-PROCESS-VIOLATION**: the code changes are independently confirmed correct, but they bypassed every review/TDD gate this class of commit bypasses — which is exactly the governance defect BOB-080 (RD2-13) tracks separately for Fable-xhigh re-review of this same diff.

9c8f684e — 2026-08-08T16:18:21+05:00 — Milos Vasic

Subject: Auto-commit **Files (6):** constitution (4ab25f5→5eb3f11), submodules/{challenges,containers,helixqa,jackett} (4 pointer bumps), scripts/host-power-management/check-no-suspend-calls.sh (+11 lines). **Evidence:** git show --stat, git diff --submodule=log, git show -- scripts/host-power-management/check-no-suspend-calls.sh. **What it did:** four submodule pointer advances plus 11 more lines added to the same suspend-call-guard exclude-list file that GA-24/54e313fa first touched — same functional area (the guard's known carrier-false-positive class) as GA-24, but this specific commit is not named by SHA in the audit doc's GA-24 paragraph, which discusses the exclusion list's state, not this particular follow-on edit. **Owning item / finding:** UNKNOWN by ticket/finding id for this specific SHA. Functionally continuous with the GA-24 carrier-false-positive class (same file, same kind of edit) but not independently cited.

743097ab — 2026-08-08T16:25:52+05:00 — Milos Vasic

Subject: Auto-commit **Files (2):** constitution (5eb3f11→e0cea69), submodules/helixqa (66e490d→db18c40) **Evidence:** git show --stat, git diff --submodule=log. **What it did:** two submodule pointer advances, no other content. **Owning item / finding:** UNKNOWN. Pure pointer bump, no citation anywhere.

49087d76 — 2026-08-08T19:58:14+03:00 — Милош Васић

Subject: Auto-commit **Files (4):** docs/GOVERNANCE_AUDIT_2026-08-08_ROUND2.md (new, 553 lines), download-proxy/src/api/routes.py, download-proxy/src/api/scheduler.py, tests/security/test_hooks_schedules_auth.py **Evidence:** git show --<each path> (full diff read, not stat-only). **What it did — EVIDENCE-BACKED, self-citing diff:** adds the require_api_token dependency to PATCH /api/v1/schedules/{id} (scheduler.py:108-110) and to PUT /api/v1/theme (routes.py:118), and extends tests/security/test_hooks_schedules_auth.py's _MUTATING enumeration with _patch_schedule/_put_theme cases plus a JSON-serializable scheduler-search double. The routes.py diff itself contains the comment *"AFTER this function — GA-11's PUT /theme fix is the first route..."* and the test diff contains *"# GA-11: a JSON-serializable double for get_scheduled_search..."* — both direct, in-diff citations, not inferred. It also adds docs/GOVERNANCE_AUDIT_2026-08-08_ROUND2.md itself (the 553-line audit document quoted extensively above) in the same commit. **Owning item / finding: GA-11** ("PATCH schedules / PUT theme still unauthenticated"), cited in the commit's own diff. Note for the record: GOVERNANCE_AUDIT_2026-08-08_ROUND2.md (added in this very commit) separately describes GA-11 as still **NOT-DONE** at the time of writing — this session did not attempt to reconcile that apparent discrepancy (whether the fix landed before or after the audit text was drafted, in the same auto-commit, is outside BOB-079's scope); it is stated here as an observed fact, not resolved.

41179c29 — 2026-08-12T20:44:17+02:00 — Милош Васић

Subject: Auto-commit **Files (1):** constitution (submodule pointer, b128eec→3cc71cd) **Evidence:** git show --stat, git diff --submodule=log. **What it did:** a pure constitution-submodule pointer move. Notably this moves the pointer back to 3cc71cd — the exact value it held *before* its own parent commit 7c529ca2 (below) had just advanced it to b128eec. This is consistent with, not separately proof of, the audit's cross-host-sync hypothesis (two hosts independently advancing the same submodule pointer in different directions); recorded as an observation, not a re-derivation of that root cause. **Owning item / finding:** UNKNOWN. No citation.

7c529ca2 — 2026-08-12T23:42:03+05:00 — Milos Vasic

Subject: Auto-commit **Files (2):** constitution (3cc71cd→b128eec), scripts/host-power-management/check-no-suspend-calls.sh (+20 lines) **Evidence:** git show --stat, git diff --submodule=log, git

show -- scripts/host-power-management/check-no-suspend-calls.sh.
What it did: a constitution pointer advance plus 20 more lines added to the same suspend-call-guard exclude list touched by 54e313fa/9c8f684e above — same functional area as GA-24 again, not independently cited by SHA. **Owning item / finding:** UNKNOWN by ticket/finding id for this specific SHA; same carrier-false-positive-guard functional area as GA-24 (not independently cited).

34ac4d72 — 2026-08-09T15:16:57+03:00 — Милош Васић

Subject: Auto-commit **Files (5):** docker-compose.yml, docs/qa/e2e-full-pipeline-20260809/multi_source_merge_samples.json, docs/qa/e2e-full-pipeline-20260809/search_linux_full_pipeline.json, docs/qa/e2e-full-pipeline-20260809/tracker_stats_summary.json, download-proxy/hooks.json (3,873 insertions, all additions except the docker-compose.yml hunk) **Evidence:** git show -- docker-compose.yml (full diff read), git show --stat for the rest. **What it did — EVIDENCE-BACKED for the docker-compose.yml hunk, self-citing diff:** adds a BOBA_API_TOKEN=\${BOBA_API_TOKEN:-} environment passthrough to the qbittorrent-proxy service, with an inline comment reading “RD2-22 (docs/GOVERNANCE_AUDIT_2026-08-08_ROUND2.md): optional shared-secret gate for the mutating download/hooks/schedules/theme routes (api/routes.py require_api_token). Unset/empty -> those routes stay OPEN (§11.4.122 backward-compat default, unchanged).” — a direct, in-diff citation. **Owning item / finding:** **RD2-22**, cited in the commit’s own diff, for the docker-compose.yml hunk specifically. The three docs/qa/e2e-full-pipeline-20260809/*.json files and download-proxy/hooks.json are QA/captured-evidence artefacts (self-describing directory name, consistent with a real end-to-end pipeline test run) but carry no ticket citation of their own — recorded as UNKNOWN for those four files.

de9270b8 — 2026-08-15T11:39:43+02:00 — Милош Васић

Subject: Auto-commit **Files (1):** plugins/rutracker.py (1 line changed) **Evidence:** git show -- plugins/rutracker.py (full diff read). **What it did:** widens the RuTracker plugin’s hardcoded User-Agent HTTP header string from a bare "Mozilla/5.0 (X11; Linux x86_64) AppleWebKit/537.36" to a fuller, more current Chrome-branded UA string. **Owning item / finding:** UNKNOWN. No ticket/GA/RD2 id anywhere in the diff or commit body; no accompanying test or doc change.

1c367775 — 2026-08-12T22:56:43+02:00 — Милош Васић

Subject: Auto-commit **Files (1):** docs/qa/coverage-escape-tmux-oomd-20260812/RESUMPTION.md (new, 68 lines) **Evidence:** git show --<path> (full file content read, not stat-only). **What it did:** commits a self-contained session-resumption handoff document, dated 2026-08-12T22:55:00Z, describing an operator-triggered tmx kill-server restart mid-session and listing prior work as already-shipped elsewhere: vasic-digital/tmux (6f9eae6 “TMX-083 systemd-oomd victim-avoidance”, 92ef3a0, b29b9e1), HelixDevelopment/qa (50f9ccf “boba-tmux-session-hardening” bank), and milos85vasic/Boba-Base (bdb2490 “§11.4.238 coverage-escape audit + first challenge”, 058ecda). **Owning item / finding:** UNKNOWN for this boba repository’s own tracker — every id the document names (TMX-083, HXC-239/243/267/270/278) belongs to sibling submodule/external repositories, not to docs/workable_items.db. No BOB-NNN/ATM-NNN was found in this repo’s DB whose body references this scenario. The document is internally self-describing (not silent about its own origin) even though it carries no local ticket id.

c5576083 — 2026-08-20T00:19:23+02:00 — Милош Васић

Subject: Auto-commit **Files (8):** .gitmodules, .specify/extensions.yml, .specify/extensions/.registry (new), .specify/init-options.json, .specify/integration.json, .specify/integrations/speckit.manifest.json, .specify/scripts/bash/update-agent-context.sh (deleted, -854 lines), superspec (new submodule gitlink) **Evidence:** git show --stat, git show -- .gitmodules, git ls-tree c5576083 -- superspec (confirms superspec is a real 160000 gitlink commit, not a plain file). **What it did:** SpecKit tooling reorganisation — registers a new superspec submodule (git@github.com:WangX0111/superspec.git), deletes the 854-line vendored .specify/scripts/bash/update-agent-context.sh (presumably superseded by the new submodule/extension mechanism), and updates the four .specify/*.json/.yml config files accordingly. **Owning item / finding:** UNKNOWN. No ticket/GA/RD2 id anywhere in the diff or commit body.

Counts (§11.4.6 — stated, not implied)

Of the **14** commits the guard’s real, unmodified default scan (v1.0.0-rc..HEAD) reports:

- **3 commits carry an in-diff, self-citing owning-finding reference**, independently cross-checked against a tracked document: 54e313fa (GA-18, GA-21, GA-22, GA-25, GA-26, GA-27 — six findings named by

GOVERNANCE_AUDIT_2026-08-08_ROUND2.md), 49087d76 (GA-11), and 34ac4d72 (RD2-22, for one of its five files only).

- **11 commits have no citable owning item or finding anywhere in their diff, body, or a cross-referenced tracked document** and are recorded above as **UNKNOWN**: cdb555f3, 55b86718, 1108fc12, 0d05ec14, 9c8f684e, 743097ab, 41179c29, 7c529ca2 (the docs/qa/e2e-full-pipeline-20260809/* + download-proxy/hooks.json files inside 34ac4d72 are counted within that commit's row, not as a 12th UNKNOWN commit), de9270b8, 1c367775, c5576083.
- None of the 14 commits were reverted, amended, rebased, or force-pushed to produce this record (§11.4.113). No entry above states an owning item that was not read directly from evidence.

What this record does not do

- It does not close BOB-079's underlying process defect (the second-host sync mechanism itself remains an open §11.4.66 operator decision per RD2-00) — it only supplies the attribution text RD2-12 asked for.
- It does not perform the Fable-xhigh independent re-review of these diffs — that is BOB-080 (RD2-13), a separate tracked item.
- It does not resolve the 49087d76 GA-11 timing discrepancy noted above.

README linkage (§11.4.212)

This document is not yet linked from README.md. README.md is owned by a concurrent stream in this session and was not edited by this item. The line below is the one that should be added by whoever next has write access to README.md, in the existing **### Incidents & QA evidence** section (the section already covering docs/QA_DISCOVERY_LEDGER.md, docs/incidents/, and docs/qa/), placed as a new bullet immediately after the existing docs/qa/ bullet:

- [`docs/history/BOB-079-attributed-auto-commit-history.md`](docs/history/BOB-079-attributed-auto-commit-history.md) – retroactive, evidenced attribution for the 14 unattributed ``Auto-commit`/`sync:`` commits in ``v1.0.0-rc..HEAD`` (BOB-079/RD2-12), never a history rewrite (§11.4.113)
