BOB-089 — QA evidence

RED-first regression suite for `start.sh --reload-python | --reload-plugins | --recreate`.

- Suite: `tests/integration/test_start_sh_reload_paths.py`
- Contract per subcommand: see file docstring (mirrors CLAUDE.md “Pick the right restart level”).
- §11.4.115(F) — verdicts read from the target at run time (podman inspect + container marker files).
- §11.4.161 — rootless podman auto-detected same way `start.sh` does.

RED — RED_reload_python_stub.log

`reload_python()`’s `find ... -exec rm -rf` line replaced with `echo "MUTATION-BOB089: cache clear skipped"`. The test FAILs with:

`AssertionError: __pycache__ still exists after --reload-python – cache-clear step did not run`

That is the exact contract-violation the mutation induces — the guard is not a tautology.

GREEN — GREEN_all_three.log

Mutation reverted. All three tests PASS on the real running fleet (podman, qbittorrent-proxy healthy):

```
test_reload_plugins_restarts_without_copying_files PASSED
test_recreate_stack_destroys_and_recreates_container PASSED
test_reload_python_clears_pycache_and_restarts PASSED
3 passed in 105.00s
```

Discriminators the tests observe:

- `--reload-python` → marker `__pycache__` removed AND `StartedAt` bumped AND container id UNCHANGED (restart, not recreate).
- `--reload-plugins` → `StartedAt` bumped AND id UNCHANGED AND `plugins/bob089_reload_plugins_marker.py` NOT auto-copied into `config/qBittorrent/nova3/engines/` (that's `./install-plugin.sh`'s job).
- `--recreate` → container id CHANGES (destroy + recreate, not a plain restart).
