BOB-117 closure evidence

Item: BOB-117 — rutracker login diag still uses forbidden §11.4.6 'likely' vocabulary + wrong error_type **Type:** Bug · **Closed as:** Fixed (→ Fixed.md) per §11.4.33 type-aware closure vocabulary
Closed: 2026-08-20 · **Verified by:** controller, independently of the reporting subagent (§11.4.262)

Why this was still Queued

The source fix landed in an earlier session but the tracker row was never reconciled — the DB still read Status=Queued while the defect was fixed AND covered by a permanent guard. That is tracker drift, not an open defect. Discovered during a §11.4.238 out-of-band sweep.

Evidence chain (§11.4.146(D3): registry row → guard → verdict → class-matched evidence)

1. The fix is present in source

```
$ grep -n 'upstream_captcha' download-proxy/src/merge_service/search.py | head -5
1299:                                "error_type": "upstream_captcha",
1353:                                "error_type": "upstream_captcha",
1371:                                "error_type": "upstream_captcha",
1674:                                "error_type": "upstream_captcha",
```

2. The forbidden hedged classification is gone

```
$ grep -nE 'no session cookie.*likely' download-proxy/src/merge_service/search.py
(no match — ABSENT)
```

3. Control needle — the absence above is real, not a blind grep (§11.4.201(7)(b))

```
$ grep -c '_search_rutracker' download-proxy/src/merge_service/
search.py
3
```

A blind instrument and a genuinely-clean file both return a quiet zero. The needle proves the search reaches this file, so the zero in step 2 is evidence rather than silence.

4. A permanent regression guard locks it in (§11.4.135)

```
tests/unit/merge_service/test_search_deep_coverage.py:1030
    assert "likely" not in diag.get("error", "").lower()
```

The guard asserts on the emitted diagnostic, so re-introducing the hedge fails the suite.

5. Guard verdict: GREEN

```
$ .venv/bin/python -m pytest tests/unit/merge_service/
test_search_deep_coverage.py \
    -k "rutracker" -q --import-mode=importlib
.....
[100%]
15 passed, 72 deselected in 4.05s
```

Honest boundary (§11.4.6)

A §11.4.115 RED demonstration (re-introduce the hedge, observe the guard FAIL) was NOT performed here: `download-proxy/src/**` is owned by a concurrently-running agent (BOB-111), and mutating it would violate §11.4.84 working-tree quiescence. The guard's assertion is structurally load-bearing (it reads the emitted error string), but the RED flip is stated as NOT captured rather than implied. Anyone re-running this can produce it once that file is quiescent.
