Recording verdict — BobaLink browser extension (gap CLOSED)

Revision: 1 **Last modified:** 2026-06-16T08:05:00Z

§11.4.143 real-user-journey + §11.4.83 evidence + §11.4.107/
§11.4.117 on-screen + §11.4.123 (built the method — the prior
“tooling-limited” was a research trigger, not acceptance). Analysis
by Claude Opus 4.8 vision.

How the prior blocker was closed

The Playwright MCP can’t launch a --load-extension browser. So I
built a real harness — extension/scripts/record-features.mjs —
that loads the BUILT MV3 artifact (.output/chrome-mv3) into a
Chromium persistent context (--headless=new --load-extension=...) with
recordVideo on, and drives genuine user journeys. The existing tests/e2e/extension-loads.spec.ts proved MV3 loads on
this host (4/4 pass), so recording is real, not faked.

Recordings (/Volumes/T7/Downloads/ Recordings/, boba- prefix)

File	Scenario	On-screen verdict
boba-extension-scan-detect.mp4	content-script scan on a matched tracker host (rutracker fixture, routed — no live network)	the real content script detects the magnet and appends a MAGNET badge inside the anchor; the non-torrent link is correctly NOT badged

File	Scenario	On-screen verdict
boba-extension-popup.mp4	the BobaLink popup the user opens	(discriminating detection) header + logo + “No server” status, “No server configured · Open Options”, Refresh + Send All buttons, “DETECTED TORRENTS” section with empty-state (“Browse a torrent site to detect...”), Options link 7 tabs (Server / Download Prefs / Queue / Notifications / Detection / UI / Security); Server config (name “Boba”, URL http://localhost:7187, Auth, Boba API token, Session passphrase, timeout); Save settings
boba-extension-options.mp4	the options/settings page	
boba-extension-tour.mp4	scan → popup → options concatenated	the three above

Extension id resolved live: okacdgiomlhjpopdibpmdbmdidpimmbj (valid MV3).

Outcome

The BobaLink extension’s real-use UI + the genuine content-script detection are now **video-confirmed** (not just unit-tested). No defect detected — detection badges the magnet and skips the non-torrent, popup + options render fully. The harness is reproducible (node scripts/record-features.mjs <dir>) for future re-confirmation.
