

boba-web-search-flow-verdict

Recording verdict — Web dashboard search flow (the #1 fixed feature)

Revision: 1 **Last modified:** 2026-06-16T00:40:00Z

§11.4.143 real-user-journey + §11.4.83 recorded evidence + §11.4.107/§11.4.117 on-screen verification. Analysis by Claude Opus 4.8 vision (operator-chosen).

Recording

- **Surface:** Web — Боба Dashboard (Angular SPA served at :7187), driven through its OWN UI in a real browser (playwright), NOT a deep-link/intent shortcut.
- **Artifacts** (/Volumes/T7/Downloads/Recordings/): boba-web-search-flow.mp4
 - frames boba-web-01-dashboard.png / -02-search-results.png / -03-results-grid.png (full grid) / -04-rows-closeup.png.
- **Journey:** launch dashboard → type debian in the search box → submit → live results → completed.
- **Tunnel:** macOS↔podman-VM SSH forward (scripts/ensure-macos-tunnel.sh) so the host-net :7187 is reachable for the browser.

Frame verdict (real on-screen content, no bluff)

Step	Frame	On-screen result	Verdict
Dashboard loaded	01	“Боба Dashboard”, qBit Connected —	PASS

Step	Frame	On-screen result	Verdict
		admin, 4 auth chips (rutracker/ kinozal/ nnmclub/ iptorrents), 29 Trackers , search box + Results/ Downloads/ Trackers/ Schedules/ Hooks tabs	
Search in progress	02	debian typed; "Found 829 results..." with live spinner + Abort; 1 Active Search	PASS — live grid updates (confirms BUG-2 fix on real UI)
Results grid	03	full-page: hundreds of debian result rows densely populated	PASS
Search complete	04	"Found 829 results (288 merged)", 1 Completed , Search button restored, result rows with action buttons	PASS — full pipeline: 29-tracker fan-out → 829 raw → 288 deduped → completed

Additional confirmed pages (dashboard tour — boba-web-dashboard-tour.mp4)

Page/feature	Frame	On-screen result	Verdict
Trackers tab navigation	boba-web-05-trackers-tab.png	tab switches to Trackers (active/ underlined);	PASS

Page/feature	Frame	On-screen result	Verdict
Jackett credentials page (/jackett)	boba-web-06-jackett-page.png	per-tracker stats header renders below the completed 829/288 search boba-jackett UI: "Credentials — encrypted at rest and mirrored to .env", "+ Add credential", empty-state "No credentials yet"	PASS (renders + routes)

Outcome

The operator's #1 complaint ("search flows do not work at all") is verifiably RESOLVED on the actual user-facing web dashboard: a real typed query returns 829 results merged to 288, live-updating, through the real browse-search UI. No problems detected requiring a fix. (Single/selected-provider modes were separately live-proven via the API in c68bb3f; a UI per-provider-filter recording is a follow-up if the dashboard exposes that control.)
