

Recording verdict – BobaLink browser extension (gap CLOSED)

Revision: 1 Last modified: 2026-06-16T08:05:00Z

§11.4.143 real-user-journey + §11.4.83 evidence + §11.4.107/§11.4.117 on-screen + §11.4.123 (built the method – the prior –tooling-limited– was a research trigger, not acceptance). Analysis by Claude Opus 4.8 vision.

How the prior blocker was closed

The Playwright MCP can™ launch a --load-extension browser. So I built a real harness – extension/scripts/record-features.mjs – that loads the BUILT MV3 artifact (.output/chrome-mv3) into a Chromium persistent context (--headless=new --load-extension=...) with recordVideo on, and drives genuine user journeys. The existing tests/e2e/extension-loads.spec.ts proved MV3 loads on this host (4/4 pass), so recording is real, not faked.

Recordings (/Volumes/T7/Downloads/Recordings/, boba- prefix)

File	Scenario	On-screen verdict
boba-extension-scan-detect.mp4	content-script scan on a matched tracker host (rutracker fixture, routed – no live network)	–... the real content script detects the magnet and appends a ⚡ MAGNET badge inside the anchor; the non-torrent link is correctly NOT badged (discriminating detection)
boba-extension-popup.mp4	the BobaLink popup the user opens	–... header + logo + –No server– status, –No server configured – Open Options–, Refresh + Send All buttons, –DETECTED TORRENTS– section with empty-state (–Browse a torrent site to detect–), Options link
boba-extension-options.mp4	the options/settings page	–... 7 tabs (Server / Download Prefs / Queue / Notifications / Detection / UI / Security); Server config (name –Boba–, URL http://localhost:7187, Auth, Boba API token, Session passphrase, timeout); Save settings
boba-extension-tour.mp4	scan –’ popup –’ options concatenated	the three above

Extension id resolved live: `okacdgi molh jpopd i bpmdbmd i dp i mmbj` (valid MV3).

Outcome

The BobaLink extension's real-use UI + the genuine content-script detection are now **video-confirmed** (not just unit-tested). No defect detected " detection badges the magnet and skips the non-torrent, popup + options render fully. The harness is reproducible (`node scripts/record-features.mjs <dir>`) for future re-confirmation.
