					standing checks stay GREEN on DB holding the forbidden row, verified on the poisoned copy from the repo root so no cwd artifact involved: (1) 'validate' → 'OK — items, all invariants satisfied' (if no status↔location coherence invariant); (2) 'diff' → 'in sync' (if and Markdown agree — on the WRONG state; agreement is not correctness); (3) CM-CLOSURE SEAM-BINDS CHECK A → PASS flags NON-terminal rows whose appears in a work commit; these rows are terminal, so they are outside its predicate by construction). This was found by reading a status tally, not by the automated regime — a §11.4.23 discovery-channel escape, which itself a defect of equal standing the mis-located rows. ACCEPTA (a) 'update' REFUSES a terminal status and names 'close' as the correct path, with a paired §1.1 mutation proving the refusal (removing the guard must make mutation pass). (b) 'validate' gr status↔location coherence invariant that FAILS on the forbidden state with a golden-bad fixture and a negative control (a legitimately terminal row in Fixed must NOT — §11.4.201(1)). (c) The 10 existing rows are drained to Fixed with matched evidence per row, or, via a row's evidence cannot be produced, honestly re-opened rather than migrated on a bare assertion (d) Honest boundary: this closes update-path hole and the detection gap; it does not claim every historical status write was evidence-backed. NOT CLAIMED. No fix implemented by this filing. The rows are untouched; draining this is acceptance (c) and each needs own evidence, not a bulk UPDATE

120	High	Fixed (→ Fixed.md)	Bug	—	BOB-183 — The compiled Angular bundle shipped at download-proxy/src/ui/dist/frontend/browser still carries the BOB-164 colour-contract defect verbatim: scanned 2026-01-01 it reports 21 violation nodes on darcula/dark and 1 on darcula/light while the same sources built to scratch path report 0 across all palette x mode combinations. This is therefore correct at the SOURCE layer and absent at the ARTIFACT layer, so §11.4.108 layer 2 is NOT closed and end users still see the low-contrast dashboard. Two compounding facts make this situation rather than obvious: dist/ is gitignored, so the divergence never shows in a diff; and scripts/install.sh:133 asserts only that the directory EXISTS, never that it is newer than the sources it was built from, so a stale bundle passes inspection unchallenged. Acceptance: install an equivalent gate) FAILS on a bundle older than its sources, then bundle is rebuilt, and docs/qa/BOB-164/axe_contrast_scan.py fails against download-proxy/src/ui/dist/frontend/browser exits 0 with zero violation nodes and zero blocking incomplete nodes.
