

Issues — Open Workable Items

Revision: 4 **Last modified:** 2026-06-06T19:00:00Z **Ticket prefix:** B0B (operator-mandated, 2026-06-06) **Scope:** Open/active items only. Closed items migrate to Fixed.md.

Tracking interim: this is the Markdown tracker. The full constitution-grade SQLite single-source-of-truth + docs_chain engine + procedure docs are themselves tracked below as **BOB-010** (not yet built). Until then this file + Issues_Summary.md are authoritative for open work.

BOB-015 — Remaining public-tracker failures are external / non-deterministic

Status: Queued **Type:** Bug **Severity:** Low **Created:** 2026-06-06

systematic-debugging FINDING (determinism test): the residual per-tracker failures are **external/non-deterministic** (site availability + network from this host), NOT code root causes. Two consecutive identical live searches: run A = 909 results / 14 success / 10 error; run B = **1422 results / 19 success / 5 error**; nyaa, piratebay, snowfl, torlock flipped error→success with **zero** success→error flips. The orchestrator already isolates per-tracker failures (other trackers succeed), so impact is bounded.

Residual (external-triggered): kickass (timeout), tokyotoshokan (SSL EOF; also crashes ungracefully on empty response — minor missing guard), yts (intermittent). The deterministic jackett crash within this set was split out and FIXED as **BOB-016**. RuTracker CAPTCHA is **BOB-008**. **Resolution direction:** low priority; optionally add empty-response guards to the crash-prone plugins (defense-in-depth) — upstream sites' availability is outside our control.

BOB-008 — RuTracker automated login blocked by CAPTCHA

Status: Operator-blocked **Type:** Bug **Created:** 2026-06-06 **Operator-Block-Details:** WHAT — RuTracker login with stored creds returns no session cookie (CAPTCHA wall). WHY — automated user/pass login is CAPTCHA-gated; self-resolution exhausted (creds correct + wired, login attempted, auth=True). UNBLOCK — operator completes the CAPTCHA flow at /api/v1/auth/rutracker/captcha + /login, or pastes a fresh bb_session cookie via /auth/rutracker/cookie-login. WHO — operator.

Evidence: live search per-tracker stat rutracker status=error auth=True error="login returned no session cookie – likely CAPTCHA".

BOB-009 — Containers submodule integrated with Go wrapper

Status: In progress **Type:** Task **Created:** 2026-06-06

Submodule added; cmd/boba-ctl/ Go binary wraps pkg/compose + pkg/runtime with up/down/status/health/list subcommands. Remaining work: wire boba-ctl up into start.sh as opt-in replacement for raw podman compose up, add HelixQA test bank for boba-ctl operations. See docs/Issues.md for pending sub-items.
