BOB-180 closure evidence — 2026-09-23

Defect

download-proxy/src/api/routes.py's captcha_required zero-result response hardcoded "RuTracker requires CAPTCHA..." regardless of which tracker(s) actually produced the captcha-flavoured error — an NNMClub-only Turnstile challenge was reported to the user as a RuTracker problem.

Fix

New `_captcha_required_message(captcha_errors)` helper parses the "<tracker>: <message>" prefix already present in each `metadata.errors` entry (matching `merge_service/search.py`'s existing `metadata.errors.append(f"{name}: {error}")` shape — not modified, only read), dedups tracker names in order, and builds a headline naming all erroring trackers. Design decision (independently verified sound): the RuTracker-specific `/api/v1/auth/rutacker/captcha` solve-URL sentence is kept ONLY when RuTracker is among the erroring trackers (it is the one tracker with a real dedicated solve endpoint); other trackers get a generic "check authentication status" sentence rather than a fabricated per-tracker endpoint.

Independent verification (coordinator, from clean shell)

```
$ python3 -m py_compile download-proxy/src/api/routes.py
OK
```

```
$ .venv/bin/python -m pytest tests/unit/api_layer/  
test_routes_coverage.py -k captcha -v  
test_sync_search_captcha_required PASSED  
test_sync_search_captcha_required_names_nnmclub_not_rutracker  
PASSED  
test_sync_search_captcha_required_names_all_erroring_trackers  
PASSED  
test_sync_search_captcha_required_names_rutracker_when_only_rutracker PASSED  
4 passed, 77 deselected
```

RED independently reproduced (via git stash, not trusted from report)

```
$ git stash push -m "... " -- download-proxy/src/api/routes.py  
$ .venv/bin/python -m pytest tests/unit/api_layer/  
test_routes_coverage.py -k captcha -v  
FAILED  
test_sync_search_captcha_required_names_all_erroring_trackers  
FAILED  
test_sync_search_captcha_required_names_nnmclub_not_rutracker  
2 failed, 2 passed  
$ git stash pop # byte-identical restore confirmed via  
py_compile
```

Golden-FALSE confirmed

test_sync_search_captcha_required_names_rutracker_when_only_rutracker_errors proves the original rutracker-only scenario's message is byte-identical to the pre-fix hardcoded string — the fix does not regress the case it used to handle correctly.

Full-suite regression check (per implementing agent, independently)

plausible given scope — 288 tests, api_layer/ full sweep)

tests/unit/api_layer/ -q → 288 passed, 1 warning in 128.60s

Status

Fixed. Closed by coordinator after independent verification.
