BOB-199 closure evidence — 2026-09-23

Defect / operator decision

Operator decision (2026-08-26, §11.4.66): flag a narrow `contextlib.suppress` ONLY when combined with an irreversible capability (delete/truncate/kill) — idiomatic narrow tolerances stay quiet.

Fix

`classify_suppress`'s AST-mode machinery gained `IRREVERSIBLE_ATTRS` (`remove/unlink/rmtree/truncate/kill/killpg`), `call_is_irreversible()`, and `body_has_irreversible_call()` walking a narrow `suppress`'s `with-block`. A `# guardrails:allow <reason>` waiver silences a genuine hit; a marker with no reason is honestly reported `MALFORMED`, never silently honored. Root-caused and fixed a self-discovered over-broad first attempt that flagged Python's own documented `stdlib` idiom (`suppress(FileNotFoundError): os.remove(...)`) — excluded specifically for the `{FileNotFoundError, FileExistsError} + remove/unlink/rmtree` combination; `kill/killpg/truncate` remain unconditionally flagged (no equivalent "already gone" idiom exists for them).

search.py claim investigated and refuted

The tracker's claim that 5 sites in `download-proxy/src/merge_service/search.py` need a BOB-199 exemption was independently re-verified as factually incorrect: all 5 sites use `suppress(Exception)` (the BROAD

form), never in scope for this narrow+irreversible extension. `search.py` left completely untouched (confirmed via `git diff --stat` returning empty).

Independent verification (coordinator, from clean shell)

```
$ bash constitution/scripts/gates/  
cm_dangerous_combination_fail_closed_mutation_test.sh  
[full 179-fixture suite, including L75-L79 B0B-199 fixtures]  
  META PASS - ... META_EXIT=0
```

Confirmed the honestly-disclosed gap holds: L75/L77/L79's degraded text-fallback mode assertion is "gate correctly PASSEd on clean fixture" (narrow+irreversible detection is AST-mode only, documented not silent).

Confirmed `search.py` genuinely untouched:

```
$ git diff --stat download-proxy/src/merge_service/search.py  
(empty)
```

Status

Fixed. Closed by coordinator after independent re-verification.
