BOB-200 closure evidence — 2026-09-23

Defect

`cm_dangerous_combination_fail_closed.sh` built its scan file list via `find(1)` piped through a process substitution that silently discarded `find`'s own exit status — a permission-denied/resource-exhausted `find` failure produced an empty file list, read as “no files in scope” → honest topology SKIP → exit 0, indistinguishable from a genuinely clean corpus (§11.4.201(6) false-null).

Fix

Replaced the process-substitution `mapfile -d '' -t files < <(find ...)` with a scratch-file capture: `find ... > "$find_scratch"; find_rc=$? checked explicitly before reading. A non-zero find_rc is now refused (exit 1, “scan enumeration failed: find exited N”), distinct from the genuine “find succeeded, zero files” honest SKIP path (unchanged, exit 0).`

Independent verification (coordinator, from clean shell)

Manual, real-fixture reproduction (not trusted from report)

```
$ mkdir -p /tmp/.../bob200_repro/blocked && chmod 000 /tmp/.../bob200_repro/blocked
```

```
$ bash constitution/scripts/gates/  
cm_dangerous_combination_fail_closed.sh --root /tmp/.../  
bob200_repro --quiet  
find: '.../blocked': Permission denied  
CM-DANGEROUS-COMBINATION-FAIL-CLOSED: FAIL — scan enumeration  
failed: find exited 1 ...  
EXIT=1
```

Genuine, live permission-denied fixture — not a synthetic/mockd find stub — correctly refused rather than silently SKIPped.

Golden-FALSE confirmed (genuinely empty root still SKIPs honestly)

Confirmed via the full mutation suite's L80/L81 fixtures (below) — a genuinely-empty, fully-readable root still produces the honest SKIP/exit 0 path unchanged.

Full mutation suite

```
$ bash constitution/scripts/gates/  
cm_dangerous_combination_fail_closed_mutation_test.sh  
  META OK:   L80 a find(1) enumeration failure (permission-denied  
  subtree) is refused ...  
  META OK:   L80 the refusal names the unresolved precondition  
  ("scan enumeration failed"), never silent  
  META OK:   L81 a normal violation is still caught after the  
BOB-200 find-failure fix ...  
  META PASS ... META_EXIT=0
```

Status

Fixed. Closed by coordinator after independent re-verification, including a manual live-fixture reproduction distinct from the automated suite.
