121	High	Fixed (→ Fixed.md)	Bug	—	BOB-165 — Reported-Via: §11.4.202 directive bug on 2026-08-21T20:00:08. Reported-By: surfaced while capturing evidence for BOB-092; diagnosed rather worked around What (the report, v This is a STALE-ABI-AFTER-INTERPRER UPGRADE defect, not a missing packa package is installed; its compiled hal the previous interpreter. That distinc

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					matters because ‘pip install rpds-py’ can appear to succeed while leaving artefact in place. WHY IT WAS NOT MENTIONED EARLIER, stated as fact: the paths that all avoid system python3. ci.sh selects interpreter through _select_python; the running suites in this session ran .venv python -m pytest and passed. So the a regime is green while the DOCUMENT operator command is broken – an 11 shaped gap, since the escape was found agent capturing evidence rather than regime. WORKAROUND (measured, not theorised): PYTEST_DISABLE_PLUGIN_AUTOLOAD the needed plugins passed explicitly (pytest_timeout ...) avoids the schema autoload that drags in jsonschema -> referencing -> rpds. That is a workaround the fix: it silences the import path rather repairing the install, and it will surprise next person who runs the document command verbatim. RELATED, and v deciding together rather than twice: wants .venv rebuilt on 3.12 to match container (which runs CPython 3.12. both system and venv run 3.14.6). There therefore THREE interpreters in play rebuilds the venv should confirm rpds for the TARGET interpreter afterwards same class reappears one directory of HONEST BOUNDARY (11.4.6): this iteration NOT claim any test is wrong or any python code is broken. The product and the test suites are unaffected. What is broken is documented entry point. Affected scope manifest: host user site-packages (~/.local/lib/python3/site-packages/rpds-CLAUDE.md-documented ‘python3 -m invocation; any tooling that uses system python3 rather than .venv/bin/python

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					Reproduction / context: python3 -m tests/e2e/test_live_stack_evidence.py mode=importlib -> ModuleNotFoundError: module named 'rpds.rpds', raised during collection via the schemathesis plugin -> jsonschema -> referencing._core -> MEASURED root cause: system python3 but ~/.local/lib/python3/site-packages/rpds.cpython-313-x86_64-linux-gnu.so extension built for 3.13. rpds/init.py 'from .rpds import *', and a 313-tagged importable by 3.14, so the submodule does not exist for this interpreter. The CORRECT and unaffected: .venv/lib64/site-packages/rpds/ ships rpds.cpython-313-x86_64-linux-gnu.so and '.venv/bin/python3 -m pytest tests/unit/ -v --importmode=importlib -- the command CLAUDE documents -- reaches collection with ModuleNotFoundError, OR CLAUDE corrected to document the supported explicitly. Either way the documented and the working command agree (11 guide that misleads is the documentation equivalent of a PASS-bluff). WORKAROUND SIDE EFFECTS MEASURED 2026-08-22 recipe is not free, and the item previously implied it was. PYTEST_DISABLE_PLUGIN_AUTOLOAD disables ALL plugin autoloading, not just the broken one, so anything the suite silently on must be re-enabled by hand: - It breaks pre-existing env-dependent tests in test_plugin_rutracker.py — TestConfig::test_default_mirrors, test_env_mirrors_override, test_get_env_with_default, test_get_mirrors_from_env_empty, test_get_mirrors_from_env_whitespaces which need an autoloading env plugin

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
122	High	Fixed (→ Fixed.md)	Bug	—	not caused by any in-flight change: run HEAD's OWN copy of that file under the flags produces the same 5 failures. - pytest-timeout=60 (set in pyproject.toml) and UNKNOWN ARGUMENT unless -p pytest_timeout is passed explicitly, so pytest.mark.timeout is silently inert and a naive recipe — a test believed to be time-bounded is not. - With autoload ON and schemathesis disabled (-p no:schemathesis) that same file is 96/96 green. CONSEQUENCE FOR ANYONE USING THE WORKAROUND: no:schemathesis alone is strictly better than blanket autoload-disabling where it's used because it removes only the broken pieces. Where the blanket form IS used, -p pytest_timeout must be added or time is inert, and the 5 env-dependent failures are recognised as workaround artifacts and not filed as defects. That last point is the problem: the workaround manufactures failures that look exactly like product defects. This is to change the root cause (the venv's rpython-cpython-313 ABI tag CPython 3.14 can't import) or the fix (rebuild the venv — see the docs). It documents that the interim recipe is a radius, so nobody reads a workaround as a regression. BOB-166 — WHAT. §11.4.19 requires migration to be ATOMIC: a resolving migration to Fixed.md, DISAPPEARS from Issues_Summary (open-only) and APPEARS in Fixed_Summary (closed-only). Ten rows of all three properties right now — they're in terminal status yet current_location=terminal, they render in docs/Issues.md and are in docs/Issues_Summary.md with a status of open, literally reads '(→ Fixed.md)', while a status of closed times in Fixed_Summary.md. Any reader of the canonical open tracker is told these are

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					work. MANIFEST (measured 2026-08-08) BOB-087 (Completed), BOB-129, BOB-144, BOB-145, BOB-146, BOB-148, BOB-155, BOB-157 (all 'Fixed (→ Fixed)') Confirmed rendering: BOB-155/087/157 grep 1 in Issues.md, 0 in Fixed.md, 0 in Issues_Summary.md, 0 hits in Fixed_Summary.md. ROOT CAUSE (root cause at runtime, not inferred). 'close' performed atomic migration and REQUIRES –ev. 'update –status' sets any §11.4.15 closure value with NO evidence and NO migration and it knows the location, because it is On a COPY of the real DB: \$ workable update –id BOB-065 –db repro.db –status (→ Fixed.md)' update: BOB-065 update Issues (status=Fixed (→ Fixed.md), type sqlite3 repro.db 'SELECT atm_id,status,current_location ...' BOB-065 Fixed (→ Fixed.md) Issues So the search supposed to be the ONLY closure path. evidence-gated per §11.4.146(D3)) has an unguarded path that reaches the same while skipping BOTH the evidence requirement and the migration. WHY NOTHING CLOSURE (§11.4.238 coverage-escape audit). The standing checks stay GREEN on a DB with a forbidden row, verified on the poison row from the repo root so no cwd artifact is involved: (1) 'validate' → 'OK — 164 invariants satisfied' (it has no status+location coherence invariant); (2) 'diff' → 'in sync and Markdown agree — on the WRO agreement is not correctness); (3) CM SEAM-BINDS CHECK A → PASS (it flags terminal rows whose id appears in a commit; these rows are terminal, so not outside its predicate by construction) found by reading a status tally, not by an automated regime — a §11.4.238 disclosure channel escape, which is itself a defect

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
123	Low	Fixed (→ Fixed.md)	Bug	—	standing to the mis-located rows. AC (a) ‘update’ REFUSES a terminal statu names ‘close’ as the correct path, wit §1.1 mutation proving the refusal (re guard must make the mutation pass) ‘validate’ grows a status↔location co invariant that FAILS on the forbidden with a golden-bad fixture and a nega (a legitimately terminal row in Fixed fire — §11.4.201(1)). (c) The 10 existin drained to Fixed with class-matched per row, or, where a row’s evidence o produced, honestly re-opened rather migrated on a bare assertion. (d) Hon boundary: this closes the update-patl the detection gap; it does not claim e historical status write was evidence-l NOT CLAIMED. No fix is implemented filing. The 10 rows are untouched; dr them is acceptance (c) and each need evidence, not a bulk UPDATE. BOB-171 — WHAT. Both rate limiters per-client bucket on the LEFTMOST e X-Forwarded-For when TRUST_FORWARDED_FOR is enabled download-proxy/src/api/rate_limit.py (:7187) and the new stdlib limiter in download_proxy.py (:7186), which w deliberately built to exact policy pari That element is CLIENT-SUPPLIED. A reverse proxy APPENDS the peer add RIGHT of whatever arrived, so the le entry is whatever the client sent — a controlled by construction, not by misconfiguration. Consequences with on: (1) rotating a forged leftmost valu unlimited sequence of fresh buckets, total bypass of the limit the flag is sup make MORE accurate; (2) it also defe LRU/idle-reap cap, since each forged

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					a distinct key — the bucket map is a growth surface bounded only by the the cap's eviction then discards the REAL clients to make room for forged EXPLOITABLE AS DEPLOYED TODAY, why this is Low, not High. TRUST_FORWARDED_FOR defaults O sites, and the deployed stack runs network_mode host with no reverse front (verified across all five compos so peer addresses are real client IPs a collapse occurs. The defect is latent: i moment someone puts a proxy in fro turns the flag on to recover real client which is exactly the situation the flag The failure mode is therefore ‘correct configuration change silently disable limiter’, not ‘currently broken’. PROV Raised as MINOR-3 by the independence reviewer of the BOB-111 rate-limiter independently confirmed by the imp agent, which noted it at BOTH source tracked follow-up rather than fixing change. Filed here because neither a write access to the tracker. WHY IT C BOTH PORTS. :7186's limiter was built deliberate policy parity with :7187's, this parsing. Fixing one and not the o leave the two surfaces disagreeing on identity — worse than the shared def because it becomes surface-dependent. untestable as a single invariant. ACCI (a) Replace leftmost-element parsing trust-aware resolution at BOTH sites: rightmost-minus-N-trusted-hops, or a proxy CIDR allowlist where only a pe the allowlist may assert XFF at all — is a deployment-topology decision an be recorded, not assumed. (b) A test t a rotating leftmost element and asse bucket key does NOT rotate, per site.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
124	High	Fixed (→ Fixed.md)	Bug	—	§1.1 mutation: restore leftmost parsing test must FAIL. (d) Negative control (§11.4.201(1)): with TRUST_FORWARDING OFF, the header must be ignored entirely; keying must fall back to the peer address guard that starts honouring XFF when it is off would be a worse defect than the being fixed. (e) Honest boundary: this header-forgery bypass; it does not make limiting fair behind NAT, where many legitimately share one address. NOT No change made. Both sites still parse the flag still defaults off. BOB-181 — WHAT: scripts/generate_markdown_exports.sh accepts arguments. It unconditionally scans PROJECT_ROOT/*.md, docs/ recursively scripts/ recursively (scan loops at line 105/111/116 as of 2026-08-23; they were when this was filed — line numbers changed with the BOB-169 fix, the substance is unchanged and was independently verified execution: invoking the generator with explicit path produced an out-of-scope and NOT the requested one), and PROJECT_ROOT is derived from BASH (line 17). A caller who writes ‘bash so generate_markdown_exports.sh docs/file.md’ gets a WHOLE-TREE run with the argument silently discarded. WHY IT the caller reasonably believes the run is scoped to one file. It was not. In a shared checkout with parallel work streams regenerate any export whose .md is newer than its derived files anywhere in the landing artifacts in other streams’ scope with the BOB-068 auto-commit hazard another stream’s commit. CLASS: a false affordance – the script’s interface implies capability it does not have (11.4.201:)

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					interface must mean what it claims). DIRECTION: either accept optional path arguments and honour them (scoping to exactly those files), or REFUSE with a message when arguments are passed, or discarding them is the one option that remain. ACCEPTANCE: passing a path scopes the run to it, or exits non-zero on the unsupported argument. A RED card today's silent-discard behaviour first LIVE INSTANCE, MEASURED 2026-08-01 (no longer hypothetical): During the E the conductor invoked the generator with explicit path to regenerate ONE document argument was discarded and the whole was scanned. It generated docs/qa/BOB-169 DESIGN_DECISION.{html,pdf,docx} as SIBLING STREAM's document, while stream's author was still editing the stream (mtime 12:00). The exports were there on arrival, and additionally carried the BOB-169 charset defect. The sibling author independently reported them as stale on hand-off, having no idea another stream created them. SECOND-ORDER LESSON keeping with this item: the conductor failed to verify the blast radius ALSO failed silently. 'git status --porcelain grep -pdf)\$'" returned only its own files and clean -- but docs/qa/BOB-174/ is an UNDIRECTED DIRECTORY, which porcelain collapses to single line, so the grep was structurally incapable of seeing the files inside it (a): matched the wrong surface; the command read as absence). The instrument that it is 'find <dir> -newermt <t>'. Any further verification of 'which files did this run must not use porcelain output as the 125 High Fixed (→ Fixed.md) Bug BOB-183 — The compiled Angular bundle shipped at download-proxy/src/ui/dis

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					browser still carries the BOB-164 color contrast defect verbatim: scanned 20 reports 21 violation nodes on darcula 1 on darcula/light, while the same so to a scratch path report 0 across all 1 mode combinations. The fix is therefore at the SOURCE layer and absent at the layer, so §11.4.108 layer 2 is NOT closed; users still see the low-contrast dashboard; compounding facts make this silent not obvious: dist/ is gitignored, so the diff never shows in a diff; and scripts/ins asserts only that the directory EXISTS that it is newer than the sources it was from, so a stale bundle passes install unchallenged. Acceptance: install (or equivalent gate) FAILS on a bundle of its sources, the bundle is rebuilt, and BOB-164/axe_contrast_scan.py run against download-proxy/src/ui/dist/frontend/ exits 0 with zero violation nodes and blocking incomplete nodes. 126 (→ Fixed.md) Bug — BOB-186 — items diff returned exit 0 and the version and Markdown are in sync" on a PAF invoked with --issues but without --fix compared 77 Markdown items against items and called that in sync, printing mismatched counts in its own output; DB items were never compared against anything. Measured 2026-08-25: (A) no markdown paths -> correctly REFUSED (B) --db-only -> honest, "no Markdown compared"; (C) --issues alone -> exit 0 (compared 77 Markdown item(s) against item(s))". The 11.4.201(6) false-null: a blind instrument returned the same as a genuinely-synced corpus returns. I CORRECTED 2026-08-25, my original OVERSTATED this. I wrote that CHECK 11.4.106(F) commit seam was exposed

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					NOT. scripts/hooks/docs-sync-commit-seam.sh:277 passes BOTH --issues and a repo-wide sweep found NO explicit caller that breaks: the two real callers seam and pre_build_verification.sh:5 pass both paths; the single-path hits a evidence files plus a static-scan test for the defect was real and latent, never project. The corrected claim is: any F single-path caller would have been s told. PROVENANCE, twice corrected. first attributed the false-null to the n form, which actually refuses correctly conductor re-measured and relocated partial read. Then the fixing agent co conductor on impact. Both correction recorded so neither wrong version p FIXED (uncommitted, constitution su fetched to upstream tip 7f16739 before 11.4.26). Design: refuse by default (11 the narrow per-tracker comparison I behind an explicit --partial-scope rather deleted (deleting an existing document capability would be an 11.4.122 silent mirroring how --db-only preserved the Markdown shape. Keyed on MEASURE content, never on flag presence — a l zero Fixed rows IS fully accounted for issues alone and still passes, so flag-k would have traded the false-null for 11.4.201(1) false-positive refusal. Res property: "in sync" is reachable only two printed counts account for each 4 fail/5 pass -> GREEN 9/9; paired 1.1 the fixs own revert, killing exactly the guarding tests while the 5 preservati stay green. Case C now refuses naming item(s) located in Fixed (supply --fixe confirmed against an independent sc (107 Fixed + 78 Issues = 185). Incident an 11.4.238 gap: case As refusal had n

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					anywhere; TestDiffCmd_NoPathsStill now guards it. OPEN: --partial-scope agents naming choice, not an operato and renaming is cheap now and exp other consumers adopt it. Other cons this shared submodule were not swe 2026-08-26. Already fixed 2026-08-25 constitution commit 5979128 ("fix(w items): diff claimed 'in sync' while 10 went uncomparred") - only this tracke stale; no code work was owed. ROOT proven from pre-fix source (11.4.6 - f inference): two individually-reasona of sync.go. (a) sync.go:852-863, the re "absent in Markdown" pass, carried `  d.CurrentLocation == "Fixed" && *fix  "" { continue }` - its own comment de intent, suppress false positives for tra caller never supplied, correct in isolat the continue ALSO dropped those row `differences`, and nothing compensat sync.go:894-897, the verdict, printed and len(dbItems) - the two MISMATCH numbers - then decided purely on `di THE VERDICT PRINTED BOTH NUMB NEVER COMPARED THEM. In one lin 11.4.201(1) false-positive guard silent narrowed comparison SCOPE while t stayed scope-unaware, so the fix for positive created its 11.4.201(6) mirror CLOSED ON BEHAVIOURAL EVIDENCE reading the commit (11.4.226 eviden closure): the shipped binary now RE partial-scope verdict instead of repor sync" - "refusing to report a DB-vs-M verdict that would silently exclude p DB - the supplied Markdown path(s) account for 122 item(s) located in Fix --fixed)", exit 1; with opt-in --partial-s reports "PARTIAL SCOPE - N differen of 201 DB item(s) were NOT compare

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					The phrase "in sync" is structurally u on a partial read. Regression suite sync_diff_partial_scope_test.go (9 test with the fix. INSTRUMENT VALIDATE WAYS (11.4.201(7)(b)): negative contr regenerating Markdown from a copy "in sync (201 against 201)" exit 0, so t is not stuck-on-FAIL. Needle A (flip B status, Issues leg) detected exit 1. Nee (delete BOB-067 on the FIXED leg - th this defect was blind to) detected as " DB, absent in Markdown" (200 vs 201 Each needle byte-verified applied be running. HONEST GAP (11.4.6): UNKN whether the shipped binaries are byt reproducible from HEAD source - the rebuilt. Both were proven to carry th and behave identically on the real co which is the behavioural evidence th rests on. No claim is made about clas does not compare (revision headers, *_Summary.md). 127 — Fixed Fixed.md) Bug — BOB-190 — W ~/.local/lib/python3/site-packages cor binaries built for the cpython-313 AB interpreter is Python 3.14, so pydanti rpds fail to import and every test imp FastAPI dies at import time. CONFIRM OURS: an untouched test file fails ide this is environmental and pre-existin MATTERS: CLAUDE.md documents 'p pytest tests/unit/ -v --import-mode=in the canonical invocation and that do command currently cannot run - doc disagree, the §11.4.99 misguidance cl environment layer. scripts/run-tests.s sidesteps it by selecting .venv/bin/pyt working path exists and simply is no docs tell a reader to type. IMPACT: an following CLAUDE.md literally concl suite is broken; worse, an agent coul

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					green by rewriting tests. ACCEPTANCE repair the host site-packages so the d command works, or correct CLAUDE TESTING.md to name the venv interp canonical - decided explicitly, not left whoever hits it next. Discovered out- the fail-open triage agent, so per §11. also owes a coverage-escape note: no check asserts the documented test in actually runs. 128 — Fixed (→ Bug — BOB-193 — WHAT: in do proxy/src/api/streaming.py the dedup written BEFORE the yield — seen_has seen_hashes_local.add() execute at :3 ahead of emitting. If format_event ra result is never sent AND its hash is al recorded, so it is permanently dropp Independently verified by the §11.4.2 reviewer at both sites: mid-search th persists across subsequent polls so th never re-emits; at completion the str immediately after, so there is no later either. Results later in the SAME batc yet added and do re-emit on the next which is why the observed symptom loss rather than total. WHY IT IS FILE SEPARATELY: the §11.4.252 fail-open this loss OBSERVABLE by adding a lo which is the right first move — but observability is not repair. The under most-once semantics remain, and pe §11.4.226(5) a mitigation cannot close it mitigates. THE DECISION IS A REAL not an oversight to correct blindly: m add-after-successful-yield gives at-lea but a DETERMINISTIC serialization f would then retry the same result on forever — trading silent loss for a ho Options are (a) keep at-most-once an log line as the contract, (b) add-after- yield with a bounded per-hash retry

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					add-before-yield but remove the has failure so exactly one retry occurs. ACCEPTANCE: an explicit decision re implemented, and covered by a test t a raising emit and asserts the chosen — with a RED observed first per §11. Raised as MINOR-1 by the independence of the fail-open batch; filed rather than absorbed so the residual defect is not along with the logging that revealed — Fixed (→ Fixed.md) Bug — **OPERATOR DECISION (2026-08-26, REFUSE TO START LAN-BOUND** Th gets a boot-time guard: bind loopback refuse to start. It does NOT get auth r in this cycle. Rationale carried with t decision: the profile is opt-in via --pro was not running when measured, and for development — so closing the exp costs a guard rather than a parity implementation. Options not chosen: middleware to parity with the Python (real work, and it would partially un BOB-101); document dev-only with n (rejected — nothing would enforce it next --profile go run on this network opens 22 routes). ACCEPTANCE: a bo check that resolves the listener's bind and refuses to start when it is not loc with a paired §1.1 mutation proving FAILs on a 0.0.0.0 bind, and a golden- proving a loopback bind is NOT refus (§11.4.201(1)). 					independently of the reporting subag qBitTorrent-go/cmd/qbittorrent-prox registers exactly three middlewares, 63 and 68: middleware.CORS, middleware.Logger, middleware.Gin. There is NO authentication middlewa per-route auth dependency. main.go: binds addr=":<port>" which is ALL in every route is LAN-reachable when t runs. SCOPE: 22 routes, of which the ones matter most - POST /api/v1/dow POST /api/v1/magnet, DELETE /api/v1 POST and DELETE /api/v1/schedules. peer can queue downloads and delet configuration with no credential. PA stated as fact: PUT /api/v1/theme is a the Python service and open in Go. T asymmetry holds for the download, l schedules mutations. Two implemen one advertised surface disagree abou it needs a credential. RELATIONSHIP BOB-101 (Go parity deferred past v1. operator decision 2026-08-26): that d covered PORT parity - the Go contain :7186 and :7188 as well as :7187. It di cover an authentication hole, and the was not asked about one, because the not been measured when the questio posed. Treating this as covered by th would be a 11.4.112(5) verdict leak: c bounded decision outside the scope i supports. This item stands separately severity is NOT settled by BOB-101. M FACT, so severity is not overstated: th profile is opt-in via --profile go and w running at measurement time (the co showed qbittorrent-proxy, the Python with no Go sibling). The exposure is l live. ACCEPTANCE: either auth middl landed in the Go service with parity Python route set, or an explicit opera

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					decision recording the Go profile as c that must refuse to start LAN-bound guard enforcing whichever is chosen Medium Fixed (→ Fixed.md) Bug BOB-201 — WHAT: scripts/ownership fences declared scope entries LEXICA normalisation + prefix/traversal refu lexical fence cannot see a symlink sit INTERMEDIATE path component. A s (already-present, no race required) s the middle of an otherwise-legal decl steers the recursive walk at a tree th never declared. Measured by the T02 independent reviewer as surviving m M5. WHY IT IS FILED SEPARATELY: t source honest-boundary note and Ca fixture assert this reach is 'tracked as It is NOT. VERIFIED 2026-08-26 by dir BOB-159's description is 4685 chars v occurrences of 'symlink' or 'intermed (control-needled - the body is readab the same query path), and no item in recorded this reach at all. A dangling citation means a real defect is record NOWHERE - the 11.4.214 lost-defect s where the pointer looks like coverage not. This item IS that record; the in-s must now cite THIS id. SCOPE / SEVE BOUNDS, stated honestly (11.4.6): the BOUNDED, not arbitrary. It requires or accident to have already placed a inside a declared scope path. It is NO from the shipped config/owned_path stands (shipped-scope control needle RC=0). It is a real widening of what a chown can touch, not a theoretical o reviewer measured it, no race neede THIS ITEM DOES NOT CLAIM: that th fence is broken. The fence does what refuses lexical escapes ('/', system tre climbs) and was verified doing so un

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					reviewer-authored mutations. This is documented LIMIT of lexical fencing recorded as a real item instead of a c an unrelated one. ACCEPTANCE: (1) c deliberately and record the decision components (realpath/-P semantics) a fence the resolved path, OR keep the fence and state the limit as an accept operator-owned risk; the choice is op owned per 11.4.66 because resolving fence depend on filesystem state at c which has its own failure modes; (2) resolution is chosen, a golden-FALSE legitimate symlinked-but-in-scope do roots still walk (11.4.201(1) - a fence t refuses is a FAIL-bluff of equal severi in-source note and the Case 24 fixtur item, not BOB-159; (4) paired 1.1 mut restore the un-resolved behaviour an fixture MUST fail. 131 Medium Fixed.md) Bug — BOB-202 — W scripts/ownership_repair.sh:493 read scope rows with 'while IFS=\$' read -r e_kind e_opt e_pres e_rec'. A scope er OMITS 'kind' emits the row ". TAB is WHITESPACE character in bash even is set to it explicitly, so a RUN of cons tabs collapses into ONE delimiter ins delimiting an empty field. Every field omission shifts left by one. MEASURE 2026-08-26 on GNU bash 5.2.37, contr (the with-field case was run FIRST an produced output, proving the instrun an earlier probe of mine returned no BOTH cases because printf lacked a t newline - an 11.4.201(7)(b) false-null rather than reported): kind PRESENT kind=[dir] opt=[1] pres=[0] rec=[1] ki path=[P] kind=[1] opt=[0] pres=[1] re CONSEQUENCE: 'optional' is read out 'preserve_mode's slot. An entry decla

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					'optional: true' is therefore treated as optional, so an absent path that should honestly instead becomes a hard failure. 'preserve_mode'/'recursive' are likewise from the wrong slots, with 'recursive' EMPTY. The shift is silent: no parse error diagnostic, no refusal. REACHABILITY: reachable from the shipped config/owned_paths.yaml - all six declared entries carry 'kind' (verified). This is a latent bug for the reader, not a live misbehaviour of the product today. PROVENANCE: surfaced by the T028 round-5 remediation while isolating an unrelated instrument and deliberately left unfixed and unfixed because (a) ownership_repair.sh had hash ae025b74602414ca for that round regress set, (b) it was outside that round NIT remit, and (c) it had not root-caused whether the repair belongs in the parser consumer, or the schema. That judgement is correct; this item is the filing it deferred. Independently re-measured by the consumer before filing - not accepted on report. COVERAGE-ESCAPE NOTE: no automaton found this. It was found by a human-agent isolating a different problem. For the coverage gap is itself a defect of the instrument standing to the bug, and closing only the violation. ACCEPTANCE: (1) root-caused correct layer - parser (never emit a read empty field), consumer (read with a read that is not IFS-whitespace, or read pointer or schema (make 'kind' mandatory and an entry lacking it, consistent with the run refusal already landed for empty expansions); the choice is operator-oriented. 11.4.66 because it changes the scope-contract; (2) a fixture with an omitted 'optional: true' asserting the entry is OPTIONAL (or the row refused), RED

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					against current code; (3) a golden-FA proving a fully-specified row still par identically - 11.4.201(1), the reader m start refusing valid scopes; (4) paired mutation restoring the collapsing rea fixture FAILs; (5) an automated check would have caught it, per 11.4.238. P FOUND 2026-08-26 (surfaced by the T round-5 reviewer, independently ver recording): the SIBLING script scripts ownership_precondition.sh ALREADY documents this exact collapse class a 565-578 and already ships the repair split_tsv() at line 579 (used at 437, 69 in-source note carries a real forensic measurement dated 2026-08-21: the version of that script used the collapse and reported”no compose service mo location” for config/ and for the down WHILE FIVE SERVICES MOUNT THEM statement about what was checked, p by the instrument rather than the sys which its own comment classifies as 11.4.201(7)(c) ’the path is part of the i failure. It also records why the unit s not see it: the fixture scope has no co service at all, so only running the rea invocation against the real scope sur WHAT THAT CHANGES FOR THIS ITE acceptance-criterion (1) ’root-cause t layer’ now has a PRECEDENT rather open design question - the consumer split_tsv-style reader that does not us IFS; adopting the sibling’s existing fu preferable to inventing a second dial (11.4.251 - two answers to one questi two files that read the SAME scope ro exactly the divergence that produced round-1 ’two readers of one scope fil finding); (b) this is a RECURRENCE of already diagnosed and closed once in

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
132	Critical	Fixed (→ Fixed.md)	Bug	—	codebase, not a novel discovery - the in one reader on 2026-08-21 and the reader kept the collapsing form, which 11.4.238 escape shape at the code layer lesson was captured in a comment in a check; (c) the 11.4.238 coverage-escape above is SHARPENED - the sibling's own comment already states that a fixture suite cannot see this class, so the request automated check must exercise a row genuinely empty middle field, not merely well-formed one. BOB-203 — MEASURED LIVE 2026-08-21 the running stack from LAN 192.168.1.1 loopback - qBittorrent's localhost bypass have exercised a different code path) docs/qa/BOB-198/ runtime_auth_verification_20260826 VERDICT: unauthenticated mutating requests ARE currently accepted. T derivation must be built either way: operator keeps the hand list, the omi is the SAME computation — the only whether it drives the scan or audits t tests/ question (324 files) is an operational decision; production-only is defensible currently UNDECLARED. BOB-206 — STATUS: UNCONFIRMED by the T041 review-scope preflight (docs/T041/review_scope_map_20260826.m stated it as “factor 6 is unguarded as could tell”. That hedge is preserved d per §11.4.6: this item exists to DRIVE verification, and MUST NOT be cited confirmed defect until a runtime pro either way. WHAT (the hypothesis to probe_location()’s verdict is a product independent terms — the §11.4.194(1 factor shape where ANY degenerate triggers the failure and verifying one

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					assuming the rest is the exact forbidden Factor 6 is the filesystem's ability to handle per-file ownership. On a uid-flattening filesystem (vfat / exfat / ntfs mounted with uid= option) every file reports the MOUNTED regardless of what any chown did or didn't do. If probe_location() reads that uid and ownership is correct, it returns 'ok' or 'not ok'. If the filesystem is structurally incapable of handling the property being probed — a §11.4.201 feature — it returns NULL at the feature's own core: the probe returns a genuinely-correct filesystem return to the caller, identical quiet success. WHY CRITICAL: the download is HOST-SPECIFIC MOUNT. Whether this is a property of the operator's actual mount or not of our source — so it cannot be solved by reading code alone, and a green probe by a developer's ext4/btrfs proves nothing about the operator whose media lives on exfat or btrfs. This is precisely the class §11.4.108 law that exists for. ADJACENT UNGUARDED TRI-STATE: the same preflight surfaced (verify together, don't share the tri-state): the precondition for refusal triggers, of which R4 is itself a product WAY product (measured-rootless AND user-spec AND mounts-a-declared-location) the source states has no second line of code. R3 and R4 both consume detect_rootless state whose DOCKER branch the source code admits is documented-not-measured. VERIFICATION PLAN (§11.4.115 RED-11.4.262 machine evidence): (1) enumerate real mount table and record which declared locations sit on uid-flattening filesystem; measurement alone may confirm or deny the whole item; (2) construct a loopback image mounted with a uid= option, probe the declared location at it, run probe_location() to capture the verdict — if it returns ok, it's RED; (3) fix by detecting the filesystem's

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
136	critical	Fixed (→ Fixed.md)	Bug	—	ownership-expressiveness and refusal reason rather than reporting ok (§11.4.238): a probe that cannot resolve it; (4) refuses and says so, never passes); (4) FALSE fixture on ext4/btrfs proving the guard does NOT refuse a healthy local (§11.4.201(1) — a false-positive refusal would break every normal operator) RADIUS: this is the ownership feature correctness core — the subject of special owned-downloads. A false ok here means feature reports success while the operator has to chown by hand, which is the C reported problem the spec exists to solve DISCOVERY CHANNEL (§11.4.238): for agent mapping the T041 review scope the automated QA regime — a coverage in its own right. The escape audit owns existing check exercises a uid-flatten filesystem, so no automated surface caught it. NOTE ON THIS RECORD: the write of this description was corrupted backtick expansion (three terms silently emptied). This is the repaired text; the corruption is recorded here rather than overwritten, per §11.4.6. BOB-207 — WHAT: scripts/lib/ownership.sh:299-320 probe_location stat -c '%u' and compares against ownership_operator_uid (id -u). It NE '%g'. Meanwhile ownership_operator defined at scripts/lib/ownership.sh:5 consumed ONLY by scripts/ownership_repair.sh:360 — so the RE establishes uid AND gid, while the PRECONDITION that verifies the repair checks uid ONLY. The precondition can therefore report ok while exactly half property the repair exists to establish MEASURED, LIVE ON THIS HOST,

#	Level	Status	Type	Fixed-In Tag(s)	One-line description

		Fixed (→ Fixed.md)			BOB-217 — WHAT: tools/plugin_update_automation.py update combines three §11.4.252 dangerous and is gated by nothing that could stop payload: - UNTRUSTED INPUT: 14 URLs from four GitHub repositories, THREE of which are third-party PERSONAL repos, not the official qbittorrent organisation. - MUTATION: tools/plugins/.py. - DEFERRED CODE EXECUTION: qBittorrent EXECUTES those engine fetched bytes over the network become executable code on the operator's host. The ONLY validation is compile(content, "", "executable", tools/plugin_update_automation.py:200), which is conductor-verified as the sole compiler. The check is a SYNTAX check. A syntactically valid payload is exactly what a hostile payload is. The check lacks signature verification, NO pinned content, NO hash allowlist, NO provenance check, NO kind. §11.4.252 requires a path combination that removes dangerous capabilities to FAIL CLOSURE. It checks every precondition, refuse when any precondition is unverifiable. This path combines THREE conditions, verifies none of them. §11.4.246's support clause is the direct counterpart: dependencies must be either vendored hash-verified, pinned, attested, or mirrored through a hash registry — an unattested public source is an integrity risk, and here the unattested source becomes EXECUTED CODE. THE SHARPEST FACT ABOUT THIS FINDING is that the closed gate produced THREE FALSE POSITIVES in this same file (:189, :198, :215 — all FALSE POSITIVE, see BOB-214's correction). While MISSING this, the one genuine combination in it. That is the §11.4.200 directions failure — false-positive and negative — demonstrated inside a similar finding is the strongest available evidence that the detector classifies by local syntactic structure and never consults semantic role (the §11.4.200)

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
143	major	Fixed (→ Fixed.md)	Bug	—	primitive named in BOB-191/BOB-218 — REACHABILITY, STATED HONESTLY (the script is invoked by NOTHING — needle-proven (91 needle hits, 0 nega control) it is referenced only by its ov README, its own docstring, and a tra zero hits across .sh / .yaml / *.py / Make tools/. Its own README self-declares invoked by the normal start/stop flow functional commit 2026-04-12. So this live in any automated path. It IS reach hand-run -update, which is exactly v tool exists for. Severity is Critical on t capability combination, bounded by reachability — not on an active explo path. ACCEPTANCE: (1) plugin source pinned (commit SHA or content hash verified before write; (2) an unverifi REFUSES and names which check fail (§11.4.252) rather than proceeding or pass; (3) the compile() call is docume source as a syntax check that is NOT gate, so nobody reads it as one; (4) a serving a syntactically-valid hostile p asserting it is REFUSED pre-fix-absen present; (5) golden-FALSE proving a l pinned update still succeeds (§11.4.238) DISCOVERY CHANNEL (§11.4.238): fo concealed-hits triage stream while es that the gate's four hits in this area w positives. Not by the automated QA r and the regime that WAS pointed her the wrong three lines. #	Level	Status	Type	Fixed-In Tag(s)	One-line description
					proven seeing: needle 2 hits, negative The plugin write opens in mode “w”, TRUNCATES IMMEDIATELY. USER-OPERATOR HARM (the reason this is not merely a defect): a failure part-way through the write leaves a TRUNCATED, NON-IMPORTANT file on disk. The operator is told the update was successful and reasonably concludes the previous version survived — because the README says so — and restores. It was not. The next ./install copies the corrupt file into config/qBittorrent/nova3/engines/ and that search engine SILENTLY STOPS WORKING. The .bak file to recover DOES exist on disk; the tool mentions it and never uses it. This is a documentation-layer bluff with a real downstream consequence: the doc asserts a safety property the code does not implement, and the operator’s recovery decision is based on that false assertion. SECOND, SMALL DIVERGENCE: the README claims JS stdout; :274 writes it to a FILE (open(args.output, “w”). THIRD, SEVERE MINOR DEFECT in the same file (recover rather than as its own item because it’s in the file and the fix window): _extract_version~:198 uses a BARE except:, so a Ctrl-C during 14-URL sweep is SWALLOWED. That’s a handling defect, not a fail-open — the code flagged this line, but for the wrong reason: it read the silent default return; the real problem is the bare except catching KeyboardInterrupt. ACCEPTANCE: (1) either the rollback is properly IMPLEMENTED (restore the .bak on failure) or the README claim is DELETED — the code must agree (§11.4.6); if implemented, write to a temp file and rename atomically rather than truncating in place; (2) the vs-file claim corrected; (3) the bare except narrowed so KeyboardInterrupt properly triggers a RED that fails the write mid-way and

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
144	minor	Fixed (→ Fixed.md)	Bug	—	the previous plugin is intact (post-fix truncated (pre-fix). REACHABILITY: sibling item — hand-run only, not in automated path, last functional command 2026-04-12. Severity Major on the hand-bounded by that reachability. DISCOVERY CHANNEL (§11.4.238): found by the command hits triage stream. Not by the automated regime. BOB-220 — WHAT: scripts/ownership_repair.sh:891-895 runs chmod intending to strip setuid/setgid bits. The chmod RUNS and SUCCEEDS, yet stays 2755. Root cause measured — C with a 3-DIGIT symbolic-equivalent of PRESERVES the setgid bit on DIRECTORIES a 4-digit form (00755) or an explicit g. The comment at :868-884 describes a defect that does not occur for directories. EFFEC today — the surviving setgid bit is not harmful, and no defect is known to fix it. This is filed as a §11.4.6 accuracy defect in-source comment asserting behavior that code does not perform. That matters for the next reader will trust it, and because future security-relevant strip written the same pattern would silently fail to work. RELATION TO BOB-207: the same was measured that after repair a new file with gid 1000 with THE SETGID BIT STILL SURVIVES two facts compound. If BOB-207 is resolved by narrowing the repair (the recommended direction), the setgid survival becomes a fact of that path but the misleading comment remains. ACCEPTANCE: (1) either the strip is made to (00755 or g-s) or the comment is corrected to state that directories retain setgid — the comment must agree; (2) if made reachable by asserting mode 2755 -> 0755 on a directory since the current form silently no-op

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
145	critical	Fixed (→ Fixed.md)	Bug	—	golden-FALSE proving a directory that keep its mode is not gratuitously changed. DISCOVERY CHANNEL (§11.4.238): for BOB-207 stream while tracing an untraced behaviour. Not by the automated QA. BOB-221 — WHAT: scripts/pre_build_verification.sh invariant 3 (BASH-UNIT-TESTS-EXECUTED) enumerates suites by FILESYSTEM GLOB (:1196) and fail() on any non-zero exit. It therefore untracks suites, and it has NO concern that is SUPPOSED to fail. MEASURED: pre_build/test_bob205_danger_roots exits 1 — correctly, because it is a RED. BOB-205, an unfixed defect. Invariant that as a gate failure. The predicted T is FAIL, and this is one of its three blocking causes. THE STRUCTURAL PROBLEM and §11.4.224 REQUIRE a RED author and OBSERVED TO FAIL before the fix. §11.4.135 requires the RED to persist a permanent regression guard. So the constitution mandates that failing tests exist in the space between authoring and fixing — and the blocking gate treats their existence as a failure. Following the constitution correctly means the gate refuse the commit. That is a §11.4.135 wrong-seam problem: the gate asserts “it fails” when the invariant it should assert “suite fails UNEXPECTEDLY”. WHY IT HAPPENED NOW: this session authored FOUR REDS in parallel streams (BOB-204, BOB-205, BOB-212) — the first time the discipline was applied at this volume. Previously REDS flipped GREEN within the same round-trip window never spanned a gate run. This is not new; the exposure is. THE FORBIDDEN RESPONSES (§11.4.120): do NOT delete the gate to make the gate green; do NOT weaken invariant 30 to ignore failures; do NOT

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					RED skipped without a tracked reason. FLAKY tests convert a real signal into silence. FLAKY tests are a DIRECTION — this is §11.4.248’s quarantine mechanism, which the constitution already specifies and this project has not wired. A RED declares its expected-failing status and is not a tracked item (a header marker, a name, a convention, or a manifest), invariantly true, that declaration, and a declared-RED is not reported as EXPECTED (not a fail) when it is UNDECLARED failure still blocks. Crucially, a declaration must EXPIRE or be tracked. §11.4.248 pairs quarantine with a stale declaration deadline precisely so “expected to fail” does not become permanent cover. A RED whose declaration closes must flip GREEN or the gate should close on the stale declaration. ACCEPTANCE: (1) a declared RED does not block; (2) an UNDECLARED failing suite still blocks. §11.4.201(1) guard — a fix that ignores failures is strictly worse than the definition of a declared RED whose tracked item is 0. (3) blocks, so declarations cannot rot; (4) §1.1 mutation removing the declaration. §11.4.201 makes the gate accept an undeclared RED. §11.4.201 gate FAILs. DISCOVERY CHANNEL (§11.4.201) found by the T042 readiness preflight. §11.4.201 the endgame rather than during it. N. §11.4.201 automated QA regime — the regime §11.4.201 that would have blocked. === CORRECTION 1 — §11.4.201 2026-08-26 — MY FIX DIRECTION IN §11.4.201 WAS WRONG, AND THE BLOCKER IS §11.4.201 (§11.4.6) === CORRECTION 1 — §11.4.201 THE MECHANISM. I wrote “this is §11.4.201 quarantine mechanism, which the constitution already specifies and this project has not wired.” That is half right and the wrong half matters. §11.4.248(A) QUARANTINE tests FLAKY tests — its trigger is literally “consecutive-run-different-verdict OR after-red”, and its remedy is to MOVE

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					to tests/quarantine/ and run the block WITHOUT it “so green means green” §11.4.248(B) PROTECTED-SPEC is a ta required-reviewer gate on MODIFYING regression test; it never says a test m RED is DETERMINISTIC and MUST ST RUN — §11.4.115(F) and §11.4.226 re RED verdict to be PRODUCED as the e Excluding it destroys the very artifact discipline mandates. Merging the two also let a genuinely flaky suite hide b RED declaration and vice versa. What legitimately supplies, and what should INHERITED rather than re-invented (is the SHAPE: a by-name list + a track deadline + a must-only-shrink ratchet CORRECTION 2 — THIS IS A LANGUAGE GAP, NOT A DESIGN VACUUM. Conduct verified: the project ALREADY runs the mechanism on the PYTHON side. <code>pytest.mark.xfail(strict=True)</code> is used deliberately for OPEN defects at tests <code>test_scaling_envelope.py:907</code> (BOB-16 documented in tests/scaling/README and tests/stress/ <code>test_plugin_parsers_stress_chaos.py:</code> own comments carry the ratchet disc verbatim (“it stays visible as xfailed i report”, “then remove this xfail”). So expected-failure, strict so an unexpected-fails” is ALREADY accepted policy in language. The BASH side has no equiv That is the real gap. CORRECTION 3 – IS NOT SUFFICIENT TO UNBLOCK TO replication of invariant 30 measured FAILED=4 SKIPPED=2: rc=124 300s <code>test_compute_badges_carrier_match.</code> HANG, not a RED. Blocks independence separately. rc=1 3s <code>test_ownership_gid_agreement.sh <-</code> RED (a SECOND in-glob RED; this iter

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					one) rc=1 1s test_bob205_danger_roo <- BOB-205's RED rc=127 9s test_check_cm_lan_routes_authenticat CONTAMINATED: a sibling stream w lan_route_auth_analyzer.py during a run (§11.4.119 — the surveying strea own that resource and correctly decl adjudicate). rc=127 is the §11.4.1 scri FAIL-bluff signature, not a product v either way. Returned to its owning st ALSO: BOB-204's and BOB-212's REDs tests/security/test_gitignore_swallow which is OUTSIDE invariant 30's glob executed by NOTHING (BOB-222) — t block today, and widening the glob w immediately add another blocker. TH RECOMMENDED: two-place declarati expiry + strict semantics. THREE inde facts must agree before a failure is ex (1) the suite is listed in scripts/lib/ expected_red.sh, a file the PRODUCIN do not own; (2) the suite file itself can EXPECTED-RED: <ID> with the SAME id OPEN in docs/workable_items.db, FA on unreadable store or unknown id (Plus STRICT-XFAIL PARITY: a declare PASSES blocks, which mechanically f ratchet to shrink in the same commit EXIT-CODE CONVENTION REJECTED MEASURED EVIDENCE — and I had f promising. The non-{0,1} exit space i CLAIMED IN THIS REPO FOR THE OP MEANING: test_gitignore_swallow_is uses exit 2 = “INSTRUMENT BROKEN LEAK — verdict void”, and test_bob205_danger_roots_scope.sh u ABORT (instrument blind). Both were precisely so a blind harness can neve as a verdict. Overloading either for “ red” would make a genuinely BLIND INSTRUMENT INDISTINGUISHABLE

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					DECLARED RED — the gate would sw exactly the failure class those codes e make loud. It also fails acceptance (4 integer carries no item id) and (3) (no rot-check), and it puts the declaration PRODUCER, collapsing producer!=gate (§11.4.240/§11.4.249). HONEST BOUND THE DESIGN (§11.4.240): it achieves s by LOCATION and MULTI-PLACE AG not by true CAPABILITY, which §11.4 prefers. There is no PR/CODEOWNER here to enforce capability — CLAUDE Stop #1 removed all CI/PR gates, so th CODEOWNERS half of §11.4.248(B) is STRUCTURALLY UNENFORCEABLE in project. What the design buys is that failure requires a coherent three-pla visible in a diff, instead of one comm THE RED: tests/pre_build/test_bob221_expected_red_declaratio extracts invariant 30's loop and its bl predicate VERBATIM FROM THE LIVI CONTENT MARKER (never line numb RUNS them against a hermetic scrato PROJECT_ROOT — so the logic under gate's own text, not a paraphrase (§1 anti-echo). Measured RED: 3 of 5 prop unmet, exit 1. P3 is asserted on the bl REASON, not merely on “it blocked” - everything blocks, so a bare did-it-bl would pass FOR THE WRONG REASO passing if the anti-rot half were neve Polarity flip proven with the BYTE-ID test file against a sandbox carrying th exit 0, all five properties met. Four p mutations each kill exactly ONE prop to-one, no cross-talk. THE PATCH: 72 hunks + one new file scripts/lib/expe git apply --check clean, NOT APPLI Operational note the landing commit miss: the table names

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					test_bob205_danger_roots_scope.sh a test_ownership_gid_agreement.sh, b carries an # EXPECTED-RED: marker to (verified 0 in both) — without those t line additions the gate blocks them w “declared but the file carries no matc marker”, which is the fail-closed desi as intended, not a bug. SEQUENCING RECOMMENDATION: (iii), a bounded (i) — land the mechanism declaring c BOB-205, BOB-207 and this item’s ow the two missing markers, triage the r as its own item, return the rc=127 to THEN run T042. THE HONEST COST, NOT HIDDEN: this modifies the block BEFORE that gate has ever run clean mechanism’s first full-gate exercise I run. The circularity is unavoidable a item (§11.4.120 — a gate whose prece produced by the work it gates): a clea is impossible while any RED exists, s the gate before changing it” cannot b Risk reduced as far as possible witho the gate (proven-applicable patch, pr polarity flip, four biting mutations, P undeclared-failures-still-block assert mutation-proven) but NOT eliminate (ii) fix-the-four-defects-first: all four a and genuinely deferred; BOB-212’s fi is an explicitly unresolved §11.4.66 O decision whose own test was deliber written fix-direction-agnostic so as n prejudge it — choosing (ii) means ma decision on the operator’s behalf, plu implementations and four reviews, a leaves the hang and the rc=127 block RECURSION NOTE: this item’s own R glob and failing, so it is itself a 5th bl the mechanism lands — at which poi

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
146	major	Fixed (→ Fixed.md)	Bug	—	already-present marker and table row. The mechanism is its own first custom BOB-222 — WHAT: scripts/pre_build_verification.sh:1196 enumerates suites with a glob covering EXACTLY the directories: “\${PROJECT_ROOT}”/tests/test_*.sh · “\${PROJECT_ROOT}”/tests/pre_build_verification.sh · “\${PROJECT_ROOT}”/tests/hello_world.sh tests/security/ is NOT among the Conductor-verified verbatim. So tests/test_gitignore_swallow_is_loud.sh — I authored this session with a golden-hammer guard proving real secrets stay ignored and not executed by NOTHING. It is a guard that does nothing, and its silence is indistinguishable from success. THIS IS THE THIRD OCCURRENCE OF ONE CLASS. The driver’s OWN code at :1030 records the history: the same directory “existed for tests/pre_build/test_*.sh” and was fixed by adding that directory to the allowlist, then recurred one directory over (tests/test_gitignore_swallow_is_loud.sh) and was fixed the same way. Now tests/security/verification was a new glob entry; none addressed the new test directory is invisible by default. §11.4.250 APPLIES DIRECTLY: three separate hand-maintained one primitive. The primitive is a hand-maintained enumeration that must be kept in lockstep with the tree, whose failure is SILENT. It is the identical shape as BOB-212’s DANGER_ROOTS and BOB-212’s .gitignore_allowlist — three separate hand-maintained lists in this repo, all three measured to have silently missed something. Adding tests/test_gitignore_swallow_is_loud.sh to the glob would be the fourth instance, N+1. NOTE THE GATE ALREADY HAS A RIGHT INSTINCT at :1220: it fails when it matches NOTHING (“the glob is blind” and the guard catches a TOTALLY blind glob and a PARTIALLY blind one — the more complex the more dangerous case, because a part

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
147	critical	Fixed (→ Fixed.md)	Bug	—	glob still reports a healthy count. FIX DIRECTION (§11.4.251 role-as-data-p the suite set from the tree — every test_*.sh — minus a DECLARED §11.4 exclusion fence with a justification p Then a new test directory cannot be and a deliberate exclusion is visible a reasoned. If a hand list is kept, the on guard is the same computation, so the derivation must be built either way. ACCEPTANCE: (1) tests/security suites (2) a NEWLY CREATED tests//test_x.sh up with no hand edit — that is the in that stops the recurrence, and without just the fourth patch; (3) a RED creati directory and asserting it runs; (4) the blind-glob guard is extended to catch blindness, not only total. DISCOVERY (§11.4.238): found by the T042 reading preflight. Not by the automated QA r and notably not by the two previous same class, neither of which asked w happened. BOB-224 — WHAT: a replication of in (same glob, same skip list, same BOBA_PREBUILD_NESTED=1, same ti measured RAN=38 FAILED=4 SKIPPE the four failures is tests/unit/ test_compute_badges_carrier_match. rc=124 after the FULL 300 seconds not fail, it HANGS. WHY IT IS FILED SEPARATELY AND URGENTLY: it bloc invariant 30, and therefore T042, INDEPENDENTLY of BOB-221. The as in BOB-221 that landing an expected mechanism unblocks T042 is FALSE a two of the four failures are REDs, one hang, one is contaminated. Landing t mechanism alone leaves T042 blocke suite. IT MUST NOT BE SILENCED BY

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					DECLARATION. A hang is a §11.4.232 failure, not a verdict: a wedged op and progressing op both look like “not finished” and marking it expected-to-fail would be a §11.4.201(6) false-null into permanent failure. That is exactly the abuse the expected design property (2) exists to prevent, and should be triaged as its own defect. INVESTIGATION: DIRECTION (§11.4.102 first, no guesswork) is the timeout(1) signature. Determining if it wedges — a consumer blocked on a producer write-end is the documented cause here (§11.4.201(12) records that a background watchdog spawned inside a \$(...) command substitution inherits the pipe write-end and early disarm orphans its sleep grandchild; the substitution stalls for the FULL budget; every verdict and exit code stays COB; That signature — full budget, correct rc=124 matches rc=124 exactly and should be the hypothesis tested, not the last. The countermeasure is documented: redi watchdog subshell fds away from the pipe, or have the probe write to a file and assume that is the cause; it is the high hypothesis given the recorded preconditions. ACCEPTANCE: (1) the wedge point is confirmed with captured evidence, not inferred; (2) the suite completes deterministically within budget; (3) a RED reproducing the hang regression cannot silently re-wedge (no false-based assertion, since the failure IS the duration); (4) NOT closed by a declaration raising the timeout — raising the budget is it. FILE DATE: the suite is dated 2026-01-01, the hang predates this session. DISCUSSION: CHANNEL (§11.4.238): found by the ESD design stream while surveying invariant more widely than its brief required — preflight had verified only 3 of 38 suites.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
148	major	Fixed (→ Fixed.md)	Bug	—	stated that boundary honestly, which prompted the wider survey. BOB-225 — WHAT, conductor-verified: .gitignore:266 ignores *.docx The §11.4.65 export pipeline GENERA twins — the workable-items export p Issues.docx / Fixed.docx / Issues_Summary.docx / Fixed_Summ and the doc exporter produced docs/ check_cm_lan_routes_authenticated. during round 9. Every one of them is untrackable by construction: they ex git will never see them, and no gate c because the absence is silent. WHY T BOB-212 CLASS, NOT A DUPLICATE C BOB-212 is a deny-all glob plus a han maintained per-file ALLOWLIST, whe files leak through the gaps in the list. deny-all glob with NO allowlist at all type the project MANDATES producin mechanism differs; the false-null is i git status stays silent, so the exporter succeed and the artifact appears to e filed separately per §11.4.214 (disting similar), with BOB-212 and BOB-219 . THE TENSION TO RESOLVE HONESTY §11.4.153 mandates a FOUR-format e (HTML + PDF + DOCX) for its docume and §11.4.65 governs the twins gener constitution requires producing an a repository is configured to refuse. Or two is wrong and the resolution is ar decision (§11.4.66): (a) the .docx man applies here and the glob must carve generated doc twins; (b) .docx is delib untracked as a heavy binary derivati regenerable per §11.4.77 from its .mc case the EXPORTERS should stop pro or produce it into an explicitly untra location, and the §11.4.153 four-form

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					requirement should be recorded as a failure, not-not-adopted rather than silently unmeasured. NOT acceptable is the present state: gitignore it, and let both the mandate and the claim appear satisfied. MEASURED SCOPE (CORRECTED — my first write of this was ‘tracked .docx files = 0’, which is FALSE, recorded here per §11.4.6 rather than amended): 2 .docx files ARE tracked and exist repo-wide, so 1138 are untracked and ignored. (A second correction, also recorded rather than amended: my first correction was 344, which counted only the docs/ subdirectory, numeric errors in a row on one item, and the pattern is that each was measured with a narrower instrument than the claim was supported, which is the §11.4.201(7)(C) part-of-the-instrument failure applied to my own reporting.) AND THE TWO SURVIVORS: THE INTERESTING PART: they are documented in Status.docx and docs/features/Status_Summary.docx — precisely the way §11.4.153 explicitly mandates as a FCI export. So the only two DOCX artifacts we see are the two a specific anchor name, and they survive not by rule but because they were already in the index. That makes this a condition, not a total one, and the two survivors are the interesting part — they are in the position as frontend/e2e/credentials.README under BOB-212: alive only because they were already in the index, since git honors .gitignore over .gitignore for tracked paths. One file was added and-re-add, one file move, and they were recorded silently like any other. So the state is not a clean ‘we never track docx’: it is an inconsistent one where two artifacts survive to prove the format IS tracked while 344 artifacts are not. ACCEPTANCE: (1) the operator does not take the above is taken and recorded; (2) which is the exporter and the ignore rule AGREEMENT.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					if .docx is not tracked, nothing should generate one into a tracked doc directly carved out, a check that a generated actually trackable, so this cannot record (4) §11.4.153 compliance is either measured as an honest gap, never left failing. DISCOVERY CHANNEL (§11.4.153) by the BOB-102 round-9 remediation when it regenerated its own guide two weeks ago. The BOB-102 round-9 remediation noticed the .docx could not be added to the automated QA regime — and the regime should see it, which is the point. BOB-227 — WHAT: three of the four artifacts in the CM-LAN-ROUTES-AUTHENTICATED build gate are untracked in git. MEASUREMENT: 2026-08-27 with git ls-files --error-untracked --exclude-untracked scripts/pre_build/lan_route_auth_and_unauthenticated, scripts/pre_build/check_cm_lan_routes_authenticated, scripts/pre_build/unauthenticated, tests/pre_build/test_check_cm_lan_routes_authenticated, tests/pre_build/unauthenticated; only docs/scripts/check_cm_lan_routes_authenticated. TRACKED. IMPACT: (1) losing this check is an entire security gate plus 197 assertions; (2) no round-over-round diff claim across rounds 8 through 14 was ever checked because no committed baseline exists; (3) §11.4.226 evidence-custody failure the chain hit independently; (3) a fresh commit pre-build gate whose implementation is not ACCEPTANCE: all four artifacts tracked and committed, and a gate asserting that the gate is executable a pre-build invariant invariant is tracked. Surfaced by the BOB-102 round-9 remediation and independently verified 2026-08-27.
149	critical	Fixed (→ Fixed.md)	Bug	—	BOB-229 — Caught live by scripts/pre_build/check_gitignore_swallow.sh (BOB-212)

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
151	Minor	Completed (→ Fixed.md)	Task	—	invariant 56), the very first real-repo was wired in. scripts/pre_build/check_cm_qbittorrent_webui_credentials/pre_build/test_check_cm_qbittorrent_webui_credentials existed on disk (executable, dated 2018-08-08) and were in DAILY FUNCTIONAL USE. scripts/pre_build_verification.sh invariant 56 confirmed QBITTORRENT-WEBUI-CREDENTIALS existed every run this session) yet were NEVER found by git: git ls-files returned nothing, git ls-files --short returned nothing (the exact Bob-230 false-null), git check-ignore confirmed .gitignore:31:credentials was a blocking rule. Both files existed ONLY in the local checkout — a fresh clone, any other environment, or any disk loss would have silently lost an entire gate implementation. Its self-validated paired-mutation mechanism gave zero signal. FIX: added explicit ! negative for both exact paths to .gitignore (making it an existing hand-maintained allowlist path). scripts/pre_build/check_gitignore_status now reports OK, confirmed both files functional (bash -n clean, and the mechanism own 8-case paired-mutation self-check 8/8). This item exists to record the inclusion of this project's own §11.4.202 reporting discipline (every discovered defect later tracked item) even though it is being fixed in the same session it was found. BOB-230 — BOB-203 added qBitTorrent internal/middleware/apitoken.go, with a scoped Gin route group covering the service with a Python-side Depends(requirement) counterpart. config/lan_route_auth_policy.yaml's exemption for this service's hooks/schedules/the
