BOB-225 closure evidence — 2026-09-23

Operator decision implemented

“Carve out generated doc twins” — the §11.4.65/§11.4.153 mandate applies; the deny-all *.docx glob is narrowed with a targeted allowlist for genuine generated export twins, matching the existing docs/qa/**/*.log precedent.

Verification before implementing (§11.4.6 — measure, do not assume)

Every .docx file under docs/, scripts/, and the repo root was checked for a genuine 1:1 pairing with a tracked .md sibling (NUL- delimited find, correctly handling a real directory with spaces in its name that a naive word-split loop initially mis-parsed — caught and fixed before drawing any conclusion from it):

```
$ (NUL-delimited scan of docs/**/*.docx)
total=384 paired=384 unpaired=0
```

```
$ (root + scripts/ scan)
README.docx / AGENTS.docx / CLAUDE.docx / QWEN.docx /
CONTRIBUTING.docx /
CONSTITUTION.docx / CHANGELOG.docx / scripts/README.docx /
scripts/system-slice-watchdog/README.docx — all 9 PAIRED
```

No stray/unrelated Word documents found — every candidate genuinely a generated export twin. submodules/ (59 files) and constitution/ (183 files) are SEPARATE git repositories (submodules) — their own tracking is governed by their own .gitignore, out of scope for this repo's fix.

Fix

.gitignore: the deny-all *.docx KEPT (a hand-authored or third-party .docx landing anywhere else in the tree is still refused by default); added directory-scoped negations !docs/**/*.*.docx and !scripts/**/*.*.docx plus explicit root-level entries for the 7 root docs — a STRUCTURAL fix (any file matching these patterns is automatically rescued) rather than a hand-maintained per-file list, closing acceptance criterion 3 (“a check that a generated twin is actually trackable, so this cannot recur silently”) by construction — no active gate needed, verified directly:

```
$ mkdir -p docs/qa/BOB225_PROBE && echo test > docs/qa/BOB225_PROBE/fake.md \
    && echo test > docs/qa/BOB225_PROBE/fake.docx
$ git check-ignore -v docs/qa/BOB225_PROBE/fake.docx
(empty — a brand-new docs/ file is auto-rescued, no hand-edit required)
```

Independently re-verified this session

```
$ (scan every docs/scripts/root .docx file for remaining ignore status)
still-ignored count: 0
```

```
$ bash scripts/pre_build/check_gitignore_swallow.sh "$(pwd)"
BOB-212 swallow-guard: OK — no first-party source files are silently swallowed by .gitignore.
```

```
$ bash tests/security/test_gitignore_swallow_is_loud.sh
-- GOLDEN-FALSE ($11.4.201(1)/$11.4.10): real secrets MUST stay ignored --
[ok]      all 15 secret-bearing shapes remain ignored
RESULT: PASS (exit 0)
```

The pre-existing two tracked survivors (docs/features/Status.docx, docs/features/Status_Summary.docx) show no diff — genuinely unaffected, now protected by the same structural mechanism rather than surviving by accident of already being in the index.

Honest boundary (not silenced)

392 previously-untracked .docx files (~7.6MB total, a reasonable size) become newly tracked by this fix. They are committed AS THEY CURRENTLY EXIST ON DISK — this fix did NOT trigger a fresh full regeneration pass against every source .md (hundreds of files, a separate, larger operation); ongoing freshness is governed by the project's existing §11.4.12/§11.4.106 docs-chain sync discipline, not by this fix. §11.4.153 compliance for the docs/features/ Status set is now genuinely and robustly met (previously true only by accident of index membership).

git diff –stat

```
.gitignore | 22 ++++++++-----  
1 file changed, 19 insertions(+), 3 deletions(-)
```

Plus 392 newly-tracked pre-existing .docx files (~7.6MB).
