

Continue â€” Project Status Snapshot

Revision: 15 **Last modified:** 2026-06-10T05:12:40Z **Session:** 2026-06-10 (Session 10 â€” env_loader fix + BOB-008 runbook + leak sweep + BOB-063 pirateiro + constitution f26368b)
Last commit: 3a8e932 (Session-10 batch-2 commits on top of this) **Branch:** main **Working tree:** CLEAN (after the doc commit that carries this update)

Send continue to pick up exactly where we left off. This file is the single source of truth for session handoff (Â§12.10 / Â§11.4.131).

CURRENT STATE â€” Session 10 (2026-06-10, subagent-driven loop)

Suite stays **FULLY GREEN**. This session was **hardening + verification, subagent-driven** (Â§11.4.70), every change code-reviewed before commit (Â§11.4.125/Â§11.4.134).

What landed (Session 10)

- **test_credential_env_wiring.py isolation fix** â€” resolved the Session-9 â€œknown low-priority follow-upâ€” below. A **merge_service** fake-namespace stub was installed at module-collection time with no teardown, so **conf testâ€™s** **_isolate_download_proxy_modules** captured-and-restored the *fake* stub into siblings in some run orders. Fixed by moving stub install into a **search_mod** fixture that snapshots/restores the 3 injected keys (**merge_service**, **.search**, **.retry**) in finally. **Evidence:** RED reproduction (the 5 credential tests + a temporary leak-probe) went 1 failed â†’ all green; the fileâ€™s own **5 tests pass** standalone; full unit suite **4121 passed** — seeds default/42/31337 (Session-10 run). Code-review **GO** (proved negation; no weakened assertions; ruff clean).
- **docs/qa/BOB-008/operator_runbook.md** â€” copy-pasteable operator unblock procedure for BOB-008 (cookie path preferred; CAPTCHA path documented with its **cap_sid/cap_code_field** friction), every endpoint claim cited to **auth.py:line** (Â§11.4.83/Â§11.4.99).
- **Latent-leak discovery sweep (Â§11.4.118)** â€” audited all of **tests/** for the module-level fake-stub-no-teardown pattern. Finding: the pattern is a **structural no-op wherever the test dir has an __init__.py** (real package pre-loads â†’ **setdefault** never installs the fake), so the ~26 **tests/unit/merge_service/** matches and **test_tracker_stats.py** are **inert** (no RED reproduces; strict TDD â†’ no fix). The single genuinely-uncovered root is **pirateiro** (see follow-up).
- **Constitution inheritance verified (Â§11.4.32/Â§11.4.35)** â€” PASS: pointer present in both layers, propagated anchors present in canonical source, no conflict markers, **pre_build_verification.sh** 18/18 green.
- **pirateiro test-isolation fix** â€” **BOB-063 (operator-approved, implemented)** â€” **tests/unit/test_plugin_pirateiro.py** injected **sys.modules['pirateiro']** at module scope with no teardown; **pirateiro** was the one root uncovered by **conf testâ€™s** isolation, so it leaked into later tests. The naive â€œadd to **_POLLUTING_ROOTS**â€” does NOT work (the leak is already inside each per-test snapshot); the real fix **caches+re-registers+purges** the stub per unit test. **Evidence (Â§11.4.115):** RED 1 failed, 44 passed â†’ GREEN 45 passed; negation proof (disable the purge â†’ re-fails); full suite **4122 passed** — seeds default/

42. Standing regression guard tests/unit/test_pirateiro_isolation_guard.py (Â§11.4.135). QA at docs/qa/BOB-063/evidence.md. **Closed BOB-063** (Task â†’ Completed).
- **Constitution submodule advanced** 60e2d66 â†’ f26368b (Â§11.4.26, **clean fast-forward, Â§11.4.113-safe**) â€” pulled Â§11.4.140 v2 (BACKGROUND action), Â§11.4.142 (universal code-review â€” already actively enforced this session; added to CLAUDE.md propagated clauses), Â§11.4.143 (video-streaming real-user-journey â€” latent/N-A to this torrent-proxy project). Cascade gate **18/18 green** at the new pin.

Open queue (Issues.md)

- **BOB-008** â€” RuTracker CAPTCHA â€” **OPERATOR-BLOCKED**. Unblock procedure documented at docs/qa/BOB-008/operator_runbook.md (preferred: paste bb_session via POST /api/v1/auth/rutracker/cookie-login).
- Everything else closed (DBâ†’i,ZMD in sync, **63 items**, bin/workable-items validate OK).

Known low-priority follow-up

- ~~pirateiro-test-isolation-defense-in-depth~~ â€” **RESOLVED this session** (BOB-063, see above).
- ~~test_credential_env_wiring/env_loader_stub-teardown-quirk~~ â€” **RESOLVED this session** (see above).

CURRENT STATE â€” Session 9 (2026-06-10, overnight autonomous loop)

The unit suite is now **FULLY GREEN** and **DETERMINISTIC**.

Metric	Value
Unit tests	4121 passed, 0 failed â€” pytest tests/unit/ --import-mode=importlib (5m24s)
Determinism (Â§11.4.50)	top-level scope 3150 passed identical across --randomly-seed 7/42/100/31337/12345
Commits this session	6e15a8d (crash guards + async/loop hangs), 6230865 (test-pollution + network timeouts) â€” both pushed to all upstreams
Code review	GO (zero findings/warnings) after Â§11.4.134 iterate-until-GO

What landed (Session 9)

- **8 product fixes** (6e15a8d): degenerate-input crash guards for tokyotoshokan/kickass/yts/piratebay; enricher full-suite-hang fix (aiohttp.ClientTimeout Ã—6); kickass/bitsearch/torrentgalaxy unbounded-loop caps (MAX_PAGES=50); mutation-scanner .venv scope fix; +7 download_proxy tests. Closed **BOB-060**.

- **Test-suite stabilization** (6230865): eliminated all `§11.4.50` order-dependent pollution `tests/conftest.py _CORRECT_MS_PATH` repo-root fix (the dominant bug: corrupted `merge_service.__path__` broke 11 tests incl. all `scheduler_api`), extended `POLLUTING_ROOTS`, + per-test `socket.socket & os.environ` snapshot/restore. Network-I/O timeout hardening (`search.py/routes.py/helpers.py/eztv.py`). Closed **BOB-061**, **BOB-062**.

Open queue (Issues.md)

- **BOB-008** `RuTracker CAPTCHA` **OPERATOR-BLOCKED**: needs you to complete the CAPTCHA at `/api/v1/auth/rutacker/captcha + /login`, OR paste a fresh `bb_session` cookie via `/auth/rutacker/cookie-login`. Cannot be solved autonomously.
- Everything else closed (DB `iŽMD` in sync, 62 items, `bin/workable-items` validate OK).

How to run the suite (both work now)

- Monolithic: `.venv/bin/python -m pytest tests/unit/ -q --import-mode=importlib` 4121 passed.
- Per-scope (faster, parallelizable): `tests/unit/merge_service/` (801) `tests/unit/api_layer/` (170) `tests/unit/*.py` top-level (3150).
- Always pass `--import-mode=importlib` (the `merge_service.deduplicator` lazy import needs it; a bare per-file run errors).

Known low-priority follow-up (NOT blocking `suite` is green)

- A residual `test_credential_env_wiring / env_loader sys.modules` stub ordering quirk surfaces only in narrow isolated file-combos; it does NOT manifest in the full top-level scope (5 seeds green) because the new `env/sys.modules` isolation covers it there. Tighten the `env_loader` stub teardown if it ever resurfaces.

Session 8 Summary

Metric	Value
Test files	47 test modules (222 <code>test_*.py</code> files total across all suites)
Test cases	4,074+ passed
Coverage (unit)	88%+ (gate: 49%)
Bugs fixed	21 (BOB-001 through BOB-025, minus BOB-008)
Submodules aligned	constitution, challenges, containers, helixqa, jactett
Ruff / Mypy	pre-existing warnings only, 0 new

Bug Tracker

21 bugs fixed across Session 8: - 10 B-substring parsing fixes - 3 import re missing fixes - 2 comma-size parsing fixes - 2 crash guards - 1 bt4g hang fix - 1 dedup circular import fix - 1 env_loader flaky test fix - 1 pirateiro full test suite (44/44)

1 remaining: BOB-008 (RuTracker CAPTCHA) â€” operator-blocked, needs manual cookie paste.

TOTAL (unit)	88%+

Known Issues

1. **BOB-008:** RuTracker CAPTCHA “ operator-blocked (needs manual cookie paste)
 2. Go backend is a skeleton (documented in AGENTS.md)
 3. Containers may be down on session start “ bash start.sh first
 4. macOS + podman network_mode: host does NOT forward ports “ ensure-macos-tunnel.sh handles this
-

Quick-Start

```
# Pre-build gate
bash scripts/pre_build_verification.sh

# Unit tests
python3 -m pytest tests/unit/ -q --import-mode=importlib

# Coverage
python3 -m pytest tests/unit/ --cov=download-proxy/src --cov=plugins --cov=

# Lint + typecheck
ruff check . && mypy download-proxy/src/

# Frontend
cd frontend && npx vitest run

# Containers
bash start.sh && bash stop.sh
```
