

nnmclub-cookie-refresh.sh

Revision: 1 Last modified: 2026-06-16T00:00:00Z

Overview

Wiring script that obtains a fresh nnmclub session, writes NNMCUB_COOKIES into .env (chmod 600, value never echoed), clears the proxy __pycache__, and restarts qbittorrent-proxy so the new cookies take effect. The out-of-the-box / cron entry point for keeping nnmclub authenticated.

Prerequisites

- NNMCUB_USERNAME / NNMCUB_PASSWORD in the environment (for the harvester path), OR a browser cookies.txt (for the extractor path).
- Node + Playwright (used by nnmclub-cookie-harvest.mjs) when harvesting.
- podman (or docker) to restart the proxy.

Usage

```
scripts/nnmclub-cookie-refresh.sh           # harvest →  
write .env → restart  
NNMCUB_HARVEST_HEADFUL=1 scripts/nnmclub-cookie-refresh.sh  #  
one-time manual Turnstile solve
```

Internal behaviour + the Turnstile reality

The harvester (nnmclub-cookie-harvest.mjs) drives a real headless Chromium through login.php. **Cloudflare Turnstile defeats unattended headless login** (verified — sitekey 0x4AAAAAAhS8bNcgfb-0Kni is an interactive, bot-detected challenge that does not auto-resolve), so the headless path exits non-zero with an honest diagnostic. Working paths: a one-time headful solve (NNMCUB_HARVEST_HEADFUL=1), or supplying browser cookies via scripts/extract-tracker-cookies.sh ~/Downloads/nnmclub.txt nnmclub.

No-bluff guard: the script REJECTS any harvested/extracted value lacking phpbb2mysql_4_sid (the session cookie) — it will not write a non-authenticating value into .env.

Edge cases

- Turnstile block / timeout / bad creds → non-zero exit, `.env` untouched, no secret leaked.
- `.env` write is atomic + `chmod 600`; the cookie value is never printed.

Related

- `scripts/nnmclub-cookie-harvest.mjs` — the Playwright harvester it runs.
- `scripts/extract-tracker-cookies.sh` — browser-jar → tracker-cookie extractor.
- `download-proxy/src/merge_service/search.py` — consumes `NNMCLUB_COOKIES`.

Last verified: 2026-06-16 (Turnstile-block finding captured; manual + extractor paths work).
