

# Issues\_Summary

Open workable items (current\_location = Issues), regenerated from the SQLite single-source-of-truth (§11.4.12).

## Counts by Type × Status

| Type         | Status           | Count     |
|--------------|------------------|-----------|
| Bug          | Operator-blocked | 1         |
| Bug          | Queued           | 16        |
| Task         | In progress      | 3         |
| Task         | Operator-blocked | 3         |
| Task         | Queued           | 34        |
| <b>TOTAL</b> |                  | <b>57</b> |

## Items

| ATM ID  | Type | Status           | Severity | Description                                                                                          |
|---------|------|------------------|----------|------------------------------------------------------------------------------------------------------|
| BOB-008 | Bug  | Operator-blocked | —        | RuTracker automated login blocked by CAPTCHA                                                         |
| BOB-065 | Task | Queued           | High     | Lava P2: Egress diagnosis and VPN-host SOCKS routing (containers pkg/egress)                         |
| BOB-066 | Task | In progress      | High     | Lava P3: BOBA_UPSTREAM_PROXY in download-proxy + qBitTorrent-go + Jackett + compose env-forward      |
| BOB-068 | Bug  | Queued           | High     | RD2-00: unattributed, unreviewed Auto-commit mechanism pushing to main                               |
| BOB-069 | Task | Queued           | High     | RD2-40: §11.4.238 QA-discovery-channel ledger — ongoing coverage-escape back                         |
| BOB-070 | Bug  | Queued           | High     | RD2-41: pre-build mutation-marker scan carrier false-positive silently defeats entire pre-build gate |
| BOB-074 | Task | Queued           | Medium   | RD2-07: DDoS-class testing fully absent from the mandated test-type matrix                           |
| BOB-077 | Task | Operator-blocked | High     | RD2-10: Identify second host running the Auto-commit rsync/sync mechanism (OPERATOR-DECISION)        |

| ATM ID  | Type | Status | Severity | Description                                                                                                           |
|---------|------|--------|----------|-----------------------------------------------------------------------------------------------------------------------|
| BOB-078 | Task | Queued | High     | RD2-11: Once identified, wire Auto-commit mechanism through §11.4.234 dedicated commit/push script OR retire          |
| BOB-079 | Task | Queued | Medium   | RD2-12: Retroactive attributed history notes for GA-18/21/22/25/26/27 changes (never rewrite published history)       |
| BOB-080 | Task | Queued | High     | RD2-13: Retroactive Fable-xhigh code review of the substantive Auto-commit diffs                                      |
| BOB-081 | Task | Queued | High     | RD2-14: Author CONTINUATION.md Session 15 entry (currently 53 days / 24 commits behind HEAD)                          |
| BOB-082 | Task | Queued | High     | RD2-15: Create BOB-064..067 workable items for the four Lava-porting findings (closes GA-05)                          |
| BOB-083 | Task | Queued | Medium   | RD2-16: Regenerate browser_extension features/codegraph Status.md + Summary/HTML/PDF siblings                         |
| BOB-084 | Task | Queued | High     | RD2-17: Reconcile BOB-008 DB/MD boo drift via the workable-items tool                                                 |
| BOB-085 | Task | Queued | Medium   | RD2-18: Create top-level Boba proxy/merge-service v1.0.0 readiness ledger (closes GA-10)                              |
| BOB-086 | Task | Queued | Medium   | RD2-19: Fix BOB-009/BOB-010 evidence_path + backfill item_history fo 56 silent closures                               |
| BOB-087 | Task | Queued | High     | RD2-20: Wire docs_chain / commit-seam sync hook per §11.4.106(F) so DB write cannot land without MD mirror            |
| BOB-088 | Task | Queued | Medium   | RD2-21: Complete/verify README Tracked-Items + Status Documents tabl row-completeness (GA-07 remainder)               |
| BOB-089 | Task | Queued | High     | RD2-24: RED-first tests for start.sh reload_python/reload_plugins/ recreate_stack (closes test-half of GA-27)         |
| BOB-090 | Task | Queued | Medium   | RD2-25: HelixQA Challenge entry exercising all three start.sh subcommand end-to-end against real compose stack        |
| BOB-092 | Bug  | Queued | Medium   | RD2-27: Remove test_live_stack_evidence.py:265 nnmclu SKIP-on-404 fallback + verify live 200 (closes GA-13)           |
| BOB-093 | Task | Queued | High     | RD2-28: Live compose bring-up + verify rutracker ReDoS regex bounds deployed to container (closes runtime half of GA- |

| ATM ID  | Type | Status           | Severity | Description                                                                                                                                |
|---------|------|------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| BOB-094 | Task | Queued           | Medium   | RD2-29: Author tests/stress/test_tracker_fetch_stress_chaos.py with §11.4.85 fault injection                                               |
| BOB-095 | Task | Queued           | Medium   | RD2-30: Author tests/stress/test_scheduler_hooks_sse_stress_chaos.py for Go-side triangle                                                  |
| BOB-096 | Task | Queued           | Medium   | RD2-31: Extend qBitTorrent-go jackett_db_test.go with real process-kill resource-exhaustion fault injection                                |
| BOB-097 | Task | Queued           | Low      | RD2-32: Author DDoS-class coverage for exposed download-proxy/merge endpoints (canonical impl of RD2-07)                                   |
| BOB-098 | Task | Queued           | Medium   | RD2-34: Parametrize 20 hardcoded /Volumes/T7 paths in helixqa banks with PROJECT_ROOT (closes GA-23)                                       |
| BOB-099 | Bug  | Queued           | Medium   | RD2-36: Fix guard-forbidden-commands.sh substring-match false-positive class + add const033-poweroff-signal-triage carrier to EXCLUDE_PATH |
| BOB-100 | Task | Queued           | Low      | RD2-39: Bump submodules/jackett one commit (canonical impl of RD2-09)                                                                      |
| BOB-101 | Task | Operator-blocked | High     | GA-19/RW-09: Is -profile go parity still a release goal? (gates RW-10..13) — OPERATOR-DECISION                                             |
| BOB-102 | Task | Operator-blocked | Medium   | RW-05: LAN-exposure threat model — bind tunnel 127.0.0.1 or keep 0.0.0.0? — OPERATOR-DECISION                                              |
| BOB-104 | Task | In progress      | Medium   | §11.4.238 followup: CodeGraph 1.5.0 nested-.gitignore regression challenge                                                                 |
| BOB-105 | Task | Queued           | Medium   | §11.4.238 followup: mechanical §11.4.227(B) anchor-block-integrity check                                                                   |
| BOB-106 | Task | Queued           | Medium   | §11.4.238 followup: §11.4.84 quiescence check helper for the unattributed auto-commit path                                                 |
| BOB-107 | Task | Queued           | Medium   | §11.4.238 followup: pre-dispatch existence check for subagent task-brief source inputs                                                     |
| BOB-109 | Task | Queued           | Medium   | BOB-074 followup: scaling-class test coverage absent from mandated test-type matrix                                                        |
| BOB-110 | Task | Queued           | Medium   | BOB-074 followup: UX-class test coverage (accessibility/usability) absent                                                                  |
| BOB-111 | Task | In progress      | High     | BOB-074 followup: configure real rate limiting for boba's 3 public HTTP endpoints                                                          |

| ATM ID  | Type | Status | Severity  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------|------|--------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BOB-113 | Task | Queued | Low       | BOB-074 followup: add wrk to dev tooling for DDoS/load challenges                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| BOB-114 | Task | Queued | Medium    | BOB-074 followup: self-validation golden bad fixture for the rate-limit detector                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| BOB-118 | Bug  | Queued | High      | README.md python-tests badge claims 585 passing; pytest --collect-only measured 5235 (9x stale/wrong)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| BOB-120 | Bug  | Queued | Critical  | 3rd forced-logout incident 2026-08-18 23:45:49 — SIGKILL user@1000 + preventive-timer-inside-user-slice architectural gap                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| BOB-135 | Bug  | Queued | Low       | Test isolation: test_list_hooks_after_creation fails in bulk suite (Permission denied / config)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| BOB-136 | Task | Queued | High      | WHAT. A single 2026-08-20 sweep found FOUR workable-item rows whose tracked state contradicted reality: BOB-076 (closed by commit 99a486e on 2026-08-15, whose message literally says “closes BOB-076”, still Queued), BOB-1 (fix landed AND covered by a permanent guard assertion, still Queued), BOB-091 (implemented under d1a8479 / a3b16bc2a0b543, still Queued), and BOB-008 whose Evidence field still quoted a diagnostic string that BOB-117 removed from source. CORRECTION 2026-08-20 (11.4.6). An earlier revision of this item claimed the enabling defect was that “workable-items diff is blind to body modification drift”. That was WRONG and is corrected here rather than quietly edited. The engine is NOT blind. The FLAGLESS INVOCATION is: workable-items diff -docs/workable_items.db -> “diff: DB and Markdown are in sync” (opens ZERO .md files) workable-items diff -db docs/workable_items.db -issues docs/Issues.rst -fixed docs/Fixed.md -> “~ BOB-008 body differs (md=1346 bytes db=1333 bytes) -> “diff: 1 difference(s)” Both measured |

| ATM ID  | Type | Status | Severity | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| BOB-137 | Bug  | Queued | High     | <p>the same seeded body-only drift. An independent agent proved the mechanism with strace: the flagless form never opened any Markdown file. So this is a 11.4.201(6) FALSE-NULL of the CALLED, not a gap in the comparison logic. Importantly, pre_build_verification.sh invariant 17 already passes both flags, so the STANDING GATE was never blind – the drift above was not caused by a blind gate. THE REAL DEFECTS, restated honestly. (1) The flagless form is a false null trap: it reports a confident, reassuring “in sync” while checking nothing. Any caller using it is a green-reporting blind check. It should either default to the conventional Issues.md/Fixed.md paths REFUSE with a clear error, never return a clean verdict for a comparison it did not perform. (2) Work commonly lands under commit messages that do not carry the ATM id (GA-14/15/16 for BOB-091), so nothing mechanically links a commit back to its row, and closure depends on a human remembering. 11.4.227: an anchor done state is its SEAM landing, not its TEXT landing. ACCEPTANCE. (a) The flagless diff invocation no longer returns a clean verdict without reading Markdown with a paired 1.1 mutation proving it. (b) A repo-wide grep confirms no caller uses the flagless form. (c) A sweep that flags any non-terminal item whose id appears in a merged commit message, so done-but-open rows are found mechanically rather than by a human noticing. (d) Honest boundary: this does not claim to prevent all drift. RELATED. scripts/hooks/docs-sync-commit-seam.sh (added under BOB-087) now enforces doc/DB sync at the commit seam and passes the flags explicitly, plus an independent body_md re-parse oracle. EVIDENCE. docs/qa/BOB-117/closure-evidence.md, docs/qa/BOB-076/closure-evidence.md, docs/qa/BOB-091/closure-evidence.md.</p> <p><b>Reported-Via:</b> §11.4.202 reporting directive bug on 2026-08-20T14:46:52Z<br/> <b>Reported-By:</b> Claude <b>What (the report verbatim):</b> The merge service on port</p> |

| ATM ID | Type | Status | Severity | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|        |      |        |          | <p>7187 wedges after hours of uptime: the port stays bound and the container keeps reporting “healthy”, but every HTTP request hangs until the client times out. Measured 2026-08-20 16:41 UTC+2 on container up 3h53m: curl http://localhost:7186/ -&gt; HTTP 200 in 0.096s (proxy, same process) curl http://localhost:7187/ -&gt; HTTP 000 after 6.0s (merge service, WEDGED) Both ports are served by the SAME process (pid 2330069, fd 3 = 7186, fd 7 = 7187), so this is not a crashed worker - one loop inside a live process has stopped servicing requests while another in the same process is fine. Thread state at the time of the wedge (/proc/2330069/task, 16 threads): - tid 2330529: state R, wchan &lt;- ONE thread spinning on CPU - tid 2330528: state S, wchan do_sys_poll &lt;- the healthy 7186 poll loop - the other 14 state S, wchan futex_wait queue That is the GIL-starvation signature: a thread busy-looping in Python holds the GIL and every other thread queues on the GIL futex. 7186 survives because do_sys_poll releases the GIL; the 7187 async loop needs sustained GIL time to service a request and starves. Process CPU was 20.6% while idle. Corroborating evidence: seven sockets held by the process sit in CLOSE-WAIT with unread bytes still in the receive queue (Recv-Q 162, 162, 162, 71, 1, 1, 1) - clients sent a request and hung up, and the app never read it or closed the fd. The listener had also accumulated an unaccepted backlog (Recv-Q 6 on the 7187 LISTEN socket) at first observation. The container log’s last line is 2h before the observation, so the service processed nothing in that window. NOT fd exhaustion: only 48 of 16384 fds were open. ROOT CAUSE NOT ESTABLISHED. All four while True loops in the service (routes.py:166, search.py:1169, streaming.py:161, streaming.py:359) are correctly bounded and awaited, so the spin is not a naive unslept loop. py-spy could not attach to name the spinning frame - the host has</p> |

| ATM ID | Type | Status | Severity | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------|------|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |      |        |          | <p>kernel.yama.ptrace_scope=1, which denies non-child attach. Per the §11.4.1 Iron Law no fix is proposed until the spinning frame is identified. Next diagnostic step: obtain a Python stack. Either run py-spy INSIDE the container (musl wheel), or set ptrace_scope=0 for the duration of one dump, or add a SIGQUIT/faulthandler.register() dump hook to main.py so the running service can be asked for its own stacks without ptrace. DISCOVERY CHANNEL (§11.4.238): found by an agent probing host by hand while investigating an unrelated test-suite result – NOT by automated QA. This is a coverage escape in its own right; see the sibling item on the health check that was structurally incapable of observing it. <b>Affected scope / file-scope manifest:</b> download-proxy/src/main.py, download-proxy/src/merge_service/, download-proxy/src/api_streaming.py, docker-compose.yml (qbittorrent-proxy) <b>Reproduction / context:</b> Leave the qbittorrent-proxy container running for several hours with search traffic (a full tests/security run is sufficient). Then: curl -max-time 6 http://localhost:7186/ returns 200; curl -max-time 6 http://localhost:7187/ returns 00 Confirm with: ss -ltnp   grep 7187 (unaccepted backlog) and awk '{print \$1}/proc/&lt;pid&gt;/task/*/stat (one R thread, r futex_wait_queue). **Acceptance criteria:** The spinning frame is identified from a real Python stack dump (not inferred), the busy-loop is fixed at its root and a regression guard proves 7187 still answers after a sustained-traffic soak. Evidence: before/after curl timings on both ports plus a thread-state census showing no permanently-R thread.     BOB-141   Task   Queued   Low   **Reported-Via:** §11.4.202 reporting directive `task` on 2026-08-20T14:56:30 **Reported-By:** Claude **What (the report, verbatim):** CLAUDE.md's Architecture section states: "qbittorrent-proxy-go (Go/Gin, opt-in via --profile go) replaces the Python proxy on 7186, 7187"</p> |

|--------|------|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |      |        |          | <p>7188" The container cannot deliver that<br/> Read from source rather than prose:<br/> qBitTorrent-go/Dockerfile:16 CMD ["/ap<br/> qbittorrent-proxy"] (ONE binary)<br/> qBitTorrent-go/Dockerfile:15 EXPOSE<br/> 7187 7188 (declares 2) cmd/qbittorrent<br/> proxy/main.go r.Run(fmt.Sprintf(":%d",<br/> cfg.ServerPort)) (binds 1) internal/confi<br/> config.go:58 ServerPort =<br/> MERGE_SERVICE_PORT (default 7187)<br/> the qbittorrent-proxy-go container bind<br/> 7187 ONLY. webui-bridge is a SEPARAT<br/> binary (cmd/webui-bridge, /bridge/health<br/> cfg.BridgePort) that this container neve<br/> starts, and nothing in it binds 7186 eith<br/> -- although the compose service does se<br/> PROXY_PORT=7186 and<br/> BRIDGE_PORT=7188 in its environmen<br/> which reinforces the wrong impression.<br/> EXPOSE likewise declares a port nothin<br/> binds. WHY THIS MATTERS BEYOND<br/> TIDINESS: this prose was used as the<br/> source of truth when first authoring<br/> config/served_ports.yaml, producing a<br/> manifest entry of [7186, 7187, 7188] for<br/> that service. The healthcheck gate built<br/> it then FAILED a service whose<br/> healthcheck was already correct -- a<br/> §11.4.201(1) false-positive refusal cause<br/> directly by trusting the doc over the<br/> Dockerfile. The manifest was corrected<br/> against source; the doc was not, and wi<br/> mislead the next reader the same way.<br/> Either the doc is wrong, or the Go<br/> container is under-provisioned relative<br/> intent (it should also run webui-bridge a<br/> a 7186 listener). Determining WHICH is<br/> part of this task -- do not simply reword<br/> the doc to match the current binary if th<br/> intended design was a three-port<br/> container. Related: the Go service's<br/> compose block sets PROXY_PORT and<br/> BRIDGE_PORT that no process in the<br/> container consumes, and EXPOSE lists<br/> 7188 unbound. Whichever way the above<br/> resolves, those should agree with reality<br/> afterwards. **Affected scope / file-scope<br/> manifest:** CLAUDE.md (Architecture -<br/> Port Map), docker-compose.yml<br/> (qbittorrent-proxy-go env/EXPOSE),</p> |

| ATM ID | Type | Status | Severity | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------|------|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |      |        |          | <p>qBitTorrent-go/Dockerfile</p> <p><b>**Reproduction / context:**</b> Read qBitTorrent-go/Dockerfile:16 (single CM against CLAUDE.md's 'replaces the Python proxy on 7186, 7187, 7188'; confirm cfg.ServerPort resolves to MERGE_SERVICE_PORT=7187 in internal/config/config.go:58. <b>**Acceptance criteria:**</b> Doc and container agree, with the direction of the fix decided deliberately (correct the doc, or provision the container to match the documented intent). PROXY_PORT/BRIDGE_PORT and EXPOSE lines agree with what the container actually binds.    BOB-143   E   Queued   Medium   <b>**Reported-Via:**</b> §11.4.202 reporting directive `bug` on 2026-08-20T15:08:18Z <b>**Reported-By:**</b> Claude <b>**What (the report, verbatim):**</b> <code>`.worktrees/ci-split-workflows/` (13M) and <code>`.worktrees/completion-initiative-phase` (33M) are ORPHANED: <code>`git worktree list` reports only the main checkout, so neither is a registered worktree. Each contains a <code>`.git` POINTER FILE whose target gitdir no longer exists, so git can't resolve HEAD, branch, or status inside them -- every query returns empty. They are gitignored (.gitignore:122), so nothing tracks them and nothing will ever notice them drifting. WHY THIS IS NOT COSMETIC: they pollute the scan scope whole-tree gates and manufacture false findings. Measured 2026-08-20 by the §11.4.32 sweep: - <code>`cm_test_mock_pid_explicit_int` reported 2 violations at tests/unit/merge_service/test_deadline_tunable.py:44 -- BOTH inside these orphaned trees. The MAIN tree's copy of that file is already hardened (it sets <code>`mock.pid = 12345`</code> and patches <code>os.killpg/os.getpgid</code>) and passes the gate cleanly. The finding read as a live §11.4.263 / BOB-126-class defect and was not one. - 6 of the 57 "missing anchor carrier" files flagged by the propagation gates were likewise <code>`.worktrees/**`</code>. This is the §11.4.201(1) false-positive shape sourced from scan scope, and it costs re-investigation time: a reader triaging "2</code></code></code></code></code></p> |

|--------|------|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |      |        |          | <p>live BOB-126 violations" reasonably treat it as a host-safety emergency.</p> <p>CLARIFICATION (established during triage, so the record is not alarming): these trees are NOT a kill(-1) vector. The `download-proxy/src/merge_service/search.py` contains ZERO `os.killpg` calls -- they predate that cleanup code entirely -- so there is no unguarded signal call to reach. Additionally `pyproject.toml` sets `testpaths = ["tests"]`, so a plain `pytest` run does not collect from `.worktrees/`. No host-safety risk was found. The defect is scan-scope noise plus 46M of unreferenced disk. WHY REMOVAL IS NOT DONE AUTONOMOUSLY (§11.4.122 / §11.4.124 / §11.4.101): because git cannot resolve their HEAD, it is NOT possible to prove their contents are merged into main. Deleting unprovable-provenance work is exactly the irreversible, operator-owned decision §11.4.122 reserves. Two options for the operator: (a) confirm removal (they are stale dev scratch dirs) -- reversible only from backup, so a §9.2 pre-op backup should precede it; or (b) keep them and add `.worktrees/` to the gate scan-scope exclusion list as a §11.4.224(E)-fenced, checked-in, justified entry. Either way the exclusion list is the cheaper immediate mitigation and does not destroy anything.</p> <p><b>**Affected scope / file-scope manifest:**</b> <code>.worktrees/ci-split-workflows/, .worktrees/completion-initiative-phase-0/, gate scan-scope completion</code></p> <p><b>**Reproduction / context:**</b> <code>git worktree list</code> shows only the main checkout; <code>git -C .worktrees/&lt;dir&gt; log -1</code> returns empty (gitdir target missing). Run the §11.4.32 sweep and observe <code>cm_test_mock_pid_explicit_int</code> report 2 violations, both under <code>.worktrees/</code>, while the main-tree file passes the same gate.</p> <p><b>**Acceptance criteria:**</b> Whole-tree gates no longer report findings sourced from orphaned worktrees: either the dirs are removed after operator confirmation with a §9.2 pre-op backup, or <code>.worktrees/</code> is added to a checked-in §11.4.224(E)-fenced</p> |

| ATM ID | Type | Status | Severity | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|        |      |        |          | <p>exclusion list with justification. Verify by re-running the sweep and confirming zero .worktrees-sourced findings.    BOB-144   Bug   Queued   Low  </p> <p><b>**Reported-Via:**</b> §11.4.202 reporting directive `bug` on 2026-08-20T15:53:57</p> <p><b>**Reported-By:**</b> Claude <b>**What (the report, verbatim):**</b> `/theme/stream` in download-proxy/src/api/routes.py:167 c the disconnect probe with NO guard at while True: if await request.is_disconnected(): break If that probe raises, the generator dies with an UNCAUGHT exception. IMPORTANT — this is NOT the BOB-139 fail-open. The effect here is fail-CLOSED: the stream stops, and the enclosing `finally: store.unsubscribe(queue)` still runs, so the subscriber queue is released and nothing leaks. The outcome is CORRECT the manner is not. What is wrong with it it terminates via an uncaught traceback rather than a clean SSE `close` event, so the client sees a truncated stream instead of a reason; - the failure is not logged as probe failure, so a systematically raising probe would show up as recurring tracebacks with no diagnosis; - it is inconsistent with the two SSE generators in streaming.py, which after BOB-139 e `event: close` with reason `disconnect_probe_failed` and log a warning. Three call sites of the same probe now behave two different ways. The BOB-139 fix deliberately did not touch the file (ownership boundary, §11.4.119), and flagged it honestly rather than fixing it out of scope. Acceptance: /theme/stream uses the same probe-failure discipline as the streaming.py generators — a clean close event with the `disconnect_probe_failed` reason plus a logged warning — proven BOTH directions (§11.4.201(1)): a raising probe closes the stream cleanly AND a normally-connected client still streams uninterrupted. Prefer reusing the shared helper introduced by BOB-139 rather than a third copy of the logic (§11.4.251). Honest boundary (§11.4.6): the product probe-failure rate is UNKNOWN —</p> |

| ATM ID | Type | Status | Severity | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|--------|------|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |      |        |          | <p>per comparison, each running 5 re.sub, and _extract_identity_from_result twice more with a ~15-re.search chain. lru_cache has ZERO matches in that module today, so the seed's own normalisation is recomputed for every candidate. Caching the per-result normalisation is a large constant-factor win with no concurrency risk. (c) REDU THE COMPARISON SET — the <math>O(N^2)</math> shape itself (blocking/bucketing by a cheap key before pairwise comparison). Largest win, largest change, highest risk of altering dedup RESULTS — which would need its own correctness evidence not just a speed measurement. (b) then is the likely order: (b) is risk-free and alone bring the merge under the threshold, and (a) guarantees the loop is never blocked regardless. MANDATORY for whoever takes this: - RED FIRST (§11.4.43/§11.4.224): a test that FAILS the current code by demonstrating the loop is blocked during a merge — e.g. assert a concurrent request to 7187 is served within a bounded time while a large merge runs. A pure speed benchmark is NOT the RED test; the defect is loop-blocking, not slowness. - BOTH POLARITIES (§11.4.201(1)): the loop stays responsive under a large merge AND dedup results are unchanged for the existing corpus. A fix that speeds up merging while changing which duplicates are detected is a different defect. - Use existing instrument: scripts/diagnostics/bob137_soak.sh reproduced the wedge 22/26; it is the natural GREEN check. - Honest boundary carried from BOB-137: measured growth is SUPER-LINEAR but not fully quadratic at <math>N \leq 400</math> (2.4-3.4x per doubling vs 4.0). Worst case is quadratic BY CODE STRUCTURE. Do not cite "measured <math>N^2</math>". **Affected scope file-scope manifest:** download-proxy/src/merge_service/search.py:914, download-proxy/src/merge_service/deduplicator.py:1000 **Reproduction / context:** bash scripts/diagnostics/bob137_soak.sh — reproduced the wedge in 22/26 probes (7187 dead,</p> |
