125	High	Fixed (→ Fixed.md)	Bug	—	BOB-158 — tests/conftest.py cannot r production interpreter: binds asyncio.events._get_event_loop_policy private API, while production is 3.12.
126	Medium	Completed (→ Fixed.md)	Task	—	BOB-160 — Reported-Via: §11.4.202 directive task on 2026-08-21T19:02:4 Reported-By: AI What (the report, v Independent §11.4.209 review (IMPO found two of the feature’s strongest a checks were never executed by any r tests/ownership/ test_container_writes_owned_files.py §11.4.115 RED-turned-regression-gua FR-011/FR-007, proven via a docker- compose.yml revert mutation — was of tests/integration/ (commit 58d340a an autouse fixture hang) but no runn test.sh, run-all-tests.sh) was ever exte cover tests/ownership/. (2) tests/pre_build_test.sh, the §1.1 paired-mutation met the scripts/pre_build/check_cm.sh ga was executed by NOTHING — self-rep honestly in commit 04742d7’s own m (‘STILL OPEN (reported, not fixed): te pre_build/ is executed by NOTHING’) tracked as a workable item (a §11.4.1 requirements gap) and never wired i pre_build_verification.sh invariant 3 globbed only tests/unit/test_.sh. Affected file-scope manifest: ci.sh; scripts/ pre_build_verification.sh invariant 30 UNIT-TESTS-EXECUTED) Reproduction context: grep -rn test_container_writes_owned_files ci.s run-all-tests.sh scripts/ returned zero (only docs/specs mentioned the path);

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
127	High	Fixed (→ Fixed.md)	Task	—	<i>scripts/pre_build_verification.sh</i> shows 30's for-loop globbing only <i>tests/unit/test_*.sh</i> and never <i>tests/pre_build/test_*.sh</i>. Acceptance criteria: <i>ci.sh</i> gains a runtime-gated <i>ownership/ stage</i> (skips honestly, <i>rc=0</i> if <i>podman/docker</i> present); <i>scripts/pre_build_verification.sh</i> invariant 30 covers both <i>tests/unit/test_*.sh</i> and <i>tests/pre_build/test_*.sh</i>, verified by an external standalone run of the invariant's example reporting a non-zero RAN count that includes files from both directories. BOB-161 — Reported-Via: §11.4.202 directive task on 2026-08-21T19:31:10Z. Reported-By: BOB-092 remediation, finding What (the report, verbatim) names CM-NO-FAIL-OPEN-SKIP as one mandatory pre-build gates: it audits probe helpers and FAILs if any code probe converts an empty or unreachable result to a PASS-counting SKIP for a feature class sink-side probe. This project does not. Why this matters now rather than in the abstract: the BOB-092 remediation just TWO fail-opens of exactly this class found in <i>e2e/test_live_stack_evidence.py</i> — the SKIP-on-404 (already removed at 7ba) surviving sibling at <i>test_iporrents_is_authenticated_in_success</i> skipped on 'not authenticated and successful' while asserting 'treating as timeout'. That assertion was false for missing credentials (<i>upstream_http_403</i>) and broken container (<i>plugin_env_missing</i>) which are definitive product failures the product already classifies via <i>error_type</i> fail-opens of one class, found one at a time the §11.4.146 extend-to-all-cases signal §11.4.238 coverage-escape signal together the regime did not surface either, an age

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					code did. The remediation's own guarantee is that the gate is structural and lethal under three distinct mutations, but they LIVE IN THE FILE GUARD, so deleting that file evades the gate entirely. A pre-build gate is the durable because it audits the corpus rather than the gate itself. Honest boundary (§11.4.6): this item is a claim the two remediated fail-opens are unguarded — they are guarded, with evidence (13 passed in 97.36s against the live stack). It claims the CLASS has no corruption detector, so the next instance in a different file is invisible again. Affected scope / file-manifest: scripts/pre_build/ (gate about e2e/test_live_stack_evidence.py (guards currently live inside the file they guard). Reproduction / context: grep -rl 'CM-OWN-OPEN-SKIP' scripts/ tests/ returns exact hit, and it is tests/e2e/test_live_stack_evidence.py — the file the guards live in, not a guard file. Needle: the same query for CM-OWN-OPEN-SKIP INVARIANTS (a gate that does exist) returns no files, so the instrument can see gate to be a hit. The single hit is a real absence, not a hit (§11.4.201(7)(b)). Acceptance criteria: pre_build/ gate named CM-NO-FAIL-CORRUPTION exists, is wired into scripts/pre_build_verification.sh, and audits the gate probe helpers for code paths converted to empty/unreachable/error response in the gate counting SKIP for a feature class that is a sink-side probe. It ships a golden-TRUE (a real fail-open -> gate FIRES) and a golden-FALSE with-carrier (an honest topology/geometric comment merely MENTIONING the probe gate MUST NOT fire), per §11.4.107(1) and §11.4.201(1). Paired §1.1 mutation management gate FAIL before the gate is trusted.
128	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-163 — OPERATOR DECISION (2023) §11.4.66 interactive clarification): Y

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					IS RESPONSIVE IF Retry-After IS W FORMED A 429 carrying a VALID Ret header counts as the sibling endpoint RESPONSIVE. Assertion (c) of the DD accepts 2xx OR a well-formed 429 (po integer seconds or valid HTTP-date — not merely present/non-empty). DEG remains: connection failure, timeout and a 429 with absent or malformed RESIDUAL RISK, accepted knowingly stated in the script source per §11.4.6 genuinely wedged endpoint that hap answer 429-with-Retry-After would p Retry-After parse narrows that wind not close it. Options (b) limiter-aware (c) exempt healthz probe were both c NOT chosen. STILL OPEN, not covere decision: the detector counts 429 only though the script header says ‘429 (o equivalent)’; counting 503 would coll the crash detector’s 5xx tally. Decide BOB-111 lands limiters on :7185 and answer is recorded as consumer DAT §11.4.35 — it is the operator’s stated an agent inference, and supersedes a agent-chosen default on this question not chosen are named above so a fut does not re-litigate a settled call (§11. bounded-verdict discipline applied to — prior item text follows — Reporte §11.4.202 reporting directive bug on 2026-08-21T19:41:08Z Reported-By: remediation, pre-existing defect surf BOB-111 landing a real limiter What report, verbatim): PRE-EXISTING, N INTRODUCED – and proven so rather asserted: git diff shows assertion (c) i IDENTICAL to HEAD, and the failure against the unmodified HEAD script. changed is not the challenge but the BOB-111 appears at least partially de

					but ~/.local/lib/python3/site-packages rpds.cpython-313-x86_64-linux-gnu.s extension built for 3.13. rpds/init.py 'from .rpds import *', and a 313-tagge importable by 3.14, so the submodule does not exist for this interpreter. Th CORRECT and unaffected: .venv/lib64 site-packages/rpds/ ships rpds.cpytho x86_64-linux-gnu.so and'.venv/bin/py import rpds' succeeds. Acceptance c python3 -m pytest tests/unit/ -v -imp mode=importlib – the command CLA documents – reaches collection witho ModuleNotFoundError, OR CLAUDE.n corrected to document the supported explicitly. Either way the documente and the working command agree (11 guide that misleads is the documenta equivalent of a PASS-bluff). WORKAR EFFECTS MEASURED 2026-08-21 — th not free, and the item previously imp PYTEST_DISABLE_PLUGIN_AUTOLOA disables ALL plugin autoloader, not jus broken one, so anything the suite silen on must be re-enabled by hand: - It B pre-existing env-dependent tests in t test_plugin_rutacker.py — TestConfig::test_default_mirrors, test_env_mirrors_override, test_get_env_with_default, test_get_mirrors_from_env_empty, test_get_mirrors_from_env_whitespa need an autoloader env plugin. PROV caused by any in-flight change: runn OWN copy of that file under identical produces the same 5 failures. - It mak -timeout=60 (set in pyproject.toml) a UNKNOWN ARGUMENT unless -p py is passed explicitly, so pytest.mark.tim silently inert under the naive recipe believed to be time-bounded is not. -

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
130	High	Fixed (→ Fixed.md)	Bug	—	autoload ON and only schemathesis (no:schemathesis), that same file is 96 CONSEQUENCE FOR ANYONE USING WORKAROUND: -p no:schemathesis strictly better than blanket autoload- where it suffices, because it removes broken plugin. Where the blanket for -p pytest_timeout must be added or t inert, and the 5 env-dependent failure recognised as workaround artifacts n filed as defects. That last point is the the workaround manufactures failure exactly like product defects. This doe change the root cause (the venv's rpo cpython-313 ABI tag CPython 3.14 can import) or the fix (rebuild the venv – It documents that the interim recipe radius, so nobody reads a workaround as a regression. BOB-166 — WHAT. §11.4.19 requires migration to be ATOMIC: a resolving to Fixed.md, DISAPPEARS from Issue (open-only) and APPEARS in Fixed_S (closed-only). Ten rows violate all thr properties right now — they carry a status yet current_location='Issues', s render in docs/Issues.md and are list Issues_Summary.md with a status tha reads '(→ Fixed.md)', while appearing Fixed_Summary.md. Any reader of th open tracker is told these are open w MANIFEST (measured 2026-08-21): B (Completed), BOB-129, BOB-131, BOB BOB-145, BOB-146, BOB-148, BOB-153 BOB-157 (all 'Fixed (→ Fixed.md)'). Co rendering: BOB-155/087/157 each gre Issues.md, 0 in Fixed.md, present in Issues_Summary.md, 0 hits in Fixed_Summary.md. ROOT CAUSE (re at runtime, not inferred). 'close' perf

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					atomic migration and REQUIRES –ev ‘update –status’ sets any §11.4.15 close value with NO evidence and NO migration and it knows the location, because it has a COPY of the real DB: \$ workable-item –id BOB-065 –db repro.db –status ‘Fixed.Fixed.md)’ update: BOB-065 updated (status=Fixed (→ Fixed.md), type=Task repro.db ‘SELECT atm_id,status,current...’ BOB-065 Fixed (→ Fixed.md) Issue seam that is supposed to be the ONLY path (close, evidence-gated per §11.4.238) has a parallel unguarded path that reaches same status while skipping BOTH the requirement and the migration. WHY CAUGHT IT (§11.4.238 coverage-escape) Three standing checks stay GREEN on holding the forbidden row, verified on poisoned copy from the repo root so artifact is involved: (1) ‘validate’ → ‘Close items, all invariants satisfied’ (it has status↔location coherence invariant ‘in sync’ (DB and Markdown agree — WRONG state; agreement is not correct CM-CLOSURE-SEAM-BINDS CHECK A flags NON-terminal rows whose id appears work commit; these rows are terminal are outside its predicate by construction was found by reading a status tally, not automated regime — a §11.4.238 disclosure channel escape, which is itself a defense standing to the mis-located rows. ACC (a) ‘update’ REFUSES a terminal status names ‘close’ as the correct path, with §1.1 mutation proving the refusal (regard guard must make the mutation pass) ‘validate’ grows a status↔location coherence invariant that FAILS on the forbidden a golden-bad fixture and a negative close legitimately terminal row in Fixed mode fire — §11.4.201(1)). (c) The 10 existing

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
131	Medium	Fixed (→ Fixed.md)	Bug	—	drained to Fixed with class-matched per row, or, where a row's evidence produced, honestly re-opened rather migrated on a bare assertion. (d) Horizontal boundary: this closes the update-path the detection gap; it does not claim evidence historical status write was evidence-1 NOT CLAIMED. No fix is implemented filing. The 10 rows are untouched; drain them is acceptance (c) and each needs evidence, not a bulk UPDATE. BOB-167 — WHAT. download-proxy and Server-Sent-Events routes. They are the expensive class — long-lived connections hold a worker and a generator for the — but only one is rate-limit classed: routes.py:801 @router.get('/search/stream/{search_id}') @_rl('sse_stream') <- class routes.py:150 @router.get('/theme/stream') def stream_theme(...) <- NO limiter decorator @_rl(cls) resolves to limiter.limit(limit=120) so /search/stream is bound to the sse_stream class while /theme/stream falls through application default. Measured live on running stack: /api/v1/theme/stream ratelimit-limit 120. PROVENANCE + A CORRECTION WORTH KEEPING (§11.1) was surfaced by the BOB-109 scaling whose report framed it as: 'sse_stream_limit_decorator is defined but not imported/applied nowhere ... SSE falls to the 120/minute default: 24x less pressure. That framing is WRONG and was NOT given. The agent searched for one symbol NAME; the wiring uses a different method (@_rl('sse_stream')), and it IS applied to search/stream. Verified by reading routes.py:795-806 and the _rl helper in routes.py:46-51, with a control needed confirming other *_limit_decorator s

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					show real usage in api/init.py so the was not a blind search. The agent's MEASUREMENT (120 on /theme/stream correct and is what makes this a real MECHANISM was not. Both halves are so the next reader does not re-derive wrong cause. WHY IT MATTERS. An SSE endpoint is the cheapest way to p resources: each connection is held on default class permits 120/min of them declared sse_stream class exists precisely because this route shape needs a tighter than ordinary GETs. ACCEPTANCE. (a) decision, recorded, on whether /theme belongs in the sse_stream class or generates warrants the default — this is a policy not automatically a bug to patch. (b) in sse_stream, the decorator is applied drives BOTH SSE routes and asserts its INTENDED class limit from x-rate so a future route added without a class (c) A guard that enumerates SSE-shape and fails on any that carries no explicit limit class — the general form, so the route does not repeat this. (d) Honest this does not claim 120/min is exploited deployment; with network_mode host reverse proxy every caller shares the bucket, which BOB-111 measured and separately. NOT CLAIMED. No change limit values were read from headers driven to exhaustion — the limiter is shared with concurrent agents on the (§11.4.119). BOB-168 — WHAT. scripts/run_all_challenges.sh:66 lists “scaling_horizontal_challenge.sh” in challenge set. challenges/scripts/scaling_horizontal_challenge.sh does sed -n ‘66p’ scripts/run_all_challenge

					claim the write currently fails in pro claims that WHEN it fails the user is opposite, and the BOB-135 investigat does fail in at least one real environ CLAIMED. No change made. No asses how often the write fails in the opera deployment. RECORDING A SHELL E MY OWN (§11.4.6): the first version o description was written with the ant snippet inside backticks in a double- argument, so the shell ran it as comm substitution and the text was replace nothing — the stored description rea the exact anti-pattern’. This is the SE this session that backticks-inside-dou has corrupted content (the first many commit message). Fixed here by editi a Python client with no shell quoting Noted because a silently-truncated d description is exactly the kind of quic corruption §11.4.201(7)(c) warns abo path is part of the instrument, and it without erroring. BOB-174 — WHAT. A corrupt hooks f silently indistinguishable from “no h configured”, and the next create the every existing hook while returning Three defects on one path, filed toget because fixing any one alone leaves t reachable. A1 — download-proxy/src hooks.py:104-112. _load_hooks wraps except Exception: logger.error(... through to return []. A truncated or hooks.json is therefore reported to ev as an empty, healthy hook list. Confir source. A2 — the consequence, and t this is High. create_hook loads, apper Given a corrupt file that load turns in save writes a one-element list over th Every previously-configured hook is
136	High	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					Measured by the implementing agent in the ALREADY-FIXED tree, so this survey is BOB-173 write-failure fix: BEFORE on disk [‘prod-hook-0’, ‘prod-hook-1’, ‘prod-hook-2’] reports : 200 {‘hooks’: [], ‘count’: 0} <- ZERO hooks configured DELETE reports : 200 {‘detail’: ‘Hook not found’} <- for a hook in the file POST reports : 200 hook_id=3c8a5930-... AFTER on disk : [‘3c8a5930-...’] Three prod hooks destroyed HTTP 200 throughout, nothing surfaced to user. A5 — _save_hooks writes with a open(path, "w"). A crash, ENOSPC, or write truncates the file in place. That is the corruption A1 then reads as “no hooks” A2 overwrites. The same codebase also has the correct pattern: theme_state.py:1 tmp-file + os.replace. WHY THE THREE ITEM. A5 manufactures the corrupt file, misreads it as empty, A2 destroys the file. Fixing only A1 leaves truncation readable; fixing only A5 leaves an existing corrupt file; data-loss trigger; fixing only A2 leaves a file lying about what is configured. The correct defect. DELIBERATELY NOT FIXED UNDER BOB-173, and the reasoning is sound. The implementing agent identified all three items, auditing sibling swallows as that item was and declined to fix them in the same way because: they change GET semantics for the endpoint the frontend consumes (200 OK) they need a CORRUPT-file reproduction that is better than the UNWRITABLE-file one BOB-173 and they need a design decision that the corrupt is genuinely not obvious — a MISSING file legitimately means “no hooks configured” a CORRUPT one does not, and today’s agents cannot tell those apart. Expanding BOB-173 scope to cover them would have meant making that decision unexamined. ACCEPTABLE Distinguish MISSING from CORRUPT

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					file remains an empty list; a corrupt error, never silently []. (b) Decide and what GET does on corruption — 5xx, an explicit degraded marker the front render. This is the design decision, and be stated rather than inferred from what the patch happens to do. (c) create/delete NOT overwrite a file they could not prevent, do not clobber (§11.4.252: must not have external side effect must fail closed). the write atomic via tmp + os.replace theme_state.py's existing pattern rather than inventing it (§11.4.28). (e) Tests assert USER-OBSERVABLE outcome, not log a corrupt file, assert GET does not clear hooks, assert a create refuses rather than destroying, and assert the file still has original hooks afterwards. (f) Paired mutation per guard. (g) NEGATIVE CO (§11.4.201(1)): a MISSING file must stay empty list and a working create; a VA must behave exactly as today. A fix that every load fail closed by failing always fix. A3, RECORDED SEPARATELY, NOT THIS CHAIN. VALID_EVENTS and HookEventType are two sources of true closed set. Verified identical today, un against drift: if they diverge a hook r successfully and then silently never f assertion pinning them would close i CLAIMED. No change made. The BOB failure fix is real and orthogonal — it FAILED write honest; it does nothing SUCCESSFUL write of wrong data der misread file. BOB-176 — WHAT. _get_enabled_trac download-proxy/src/merge_service/s gates rutracker on RUTRACKER_USE RUTRACKER_PASSWORD only. It never RUTRACKER_COOKIES. So an operator
137	Medium	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					configured with cookies alone — no v no password — never has rutracker all, and the tracker is silently absent fan-out rather than failing visibly. W INCOHERENT WITH THE REST OF TH _search_rutracker treats COOKIES as PREFERRED auth path, not a fallback nnmclub sibling DOES check its own variable. So the same codebase holds positions at once: cookies preferred a search site, cookies ignored at the en gate, and cookies honoured for a sibl WHY IT MATTERS MORE THAN IT LO CLAUDE.md documents a standing o mandate (2026-08-15) that per-tracker cookies files at \${TRACKER_COOKIE_ cookies_<tracker>.txt are auto-loaded as <TRACKER>_COOKIES before ever up, restart, install Stage 6 and start.sl and rutracker is named in that set. So SANCTIONED, documented configura for this tracker produces exactly the gate ignores. An operator who follow documented instructions gets a track never runs, with no error to explain MODE. Silent absence, not a visible fa same §11.4.201(6) false-null shape as one layer earlier. BOB-172 fixes a tra RAN and was REFUSED being reporte empty; this is a tracker that never ran the merged result simply has one few contributor with nothing to indicate PROVENANCE. Found by the BOB-172 implementing agent while tracing th enablement path to locate the status- defect. Recorded here rather than fix change: it is a separate defect on a se seam with its own oracle, and folding have widened BOB-172 past its captu evidence. ACCEPTANCE. (a) The enab honours RUTRACKER_COOKIES as an

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					independently sufficient credential, not what _search_rutracker already preferred what the nnmclub sibling already does, asserting that a cookies-only configuration ENABLES rutracker, driving the real _get_enabled_trackers rather than a mutation. Paired §1.1 mutation restoring the usual password-only gate — the test must give NEGATIVE CONTROL (§11.4.201(1)): a configuration with NO credentials at all still leave rutracker DISABLED. A fix enables an unauthenticated tracker instead than the gap, because it produces failed searches instead of absent ones. (e) A fix for other trackers' gates for the same asymmetry rather than fixing only the one that was broken — three positions in one codebase such that nobody has checked them together (§11.4.194(6) HONEST BOUNDARY. Not verified against a cookies-only deployment; read from the BOB-172 agent and recorded on its log. The reading is specific and checkable by whoever takes this should confirm by testing before relying on it. 138 High Fixed.md) Bug — BOB-177 — WIRELESS BOB-172 wired an identical 4-line HTTP guard at five private-tracker fetch sites: download-proxy/src/merge_service/src/merge_service.py (rutracker cookie :1390, rutracker cookie :1468, kinozal :1648, nnmclub :1761, iptorrents :1934). Only the rutracker COOKIE path was exercised by tests. EVIDENCE (reviewed by the authored mutation R1, per 11.4.194(6) the BOB-172 independent review): decompilation ONLY the kinozal guard wiring (search.py:1655-1658) while leaving the classifier intact left the full merge_service.py at 883 passed, ZERO failures. The suite failed to see four of the five sites. FAILING SCENARIO: refactor drops or subtly breaks the wiring for kinozal, nnmclub, iptorrents, or rutracker.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					credential. A 403 at that site silently failed to status=empty with error=None -- the BOB-172 signature -- and no test reddens DIRECTION (reviewer preferred): color five duplicated wirings into one shared e.g. _check_search_response(tracker_status, body) -> bool, so there is ONE and a sixth site cannot be added ungrouped (11.4.251 byte-identical-fork extraction). Alternative: parametrise the guard to all five sites with per-site stub session. ACCEPTANCE: mutating the wiring at five sites reddens at least one test. Problem running the same R1 deletion at each turn. 139 Medium Fixed (→ Fixed.md) Bug — BOB-178 — WHAT: download-proxy/src/merge_service/search.py:1638-1640 a failed kinozal LOGIN response with login_resp.status not in (200, 301, 302) logger.error(...); return [] -- and sets N diagnostic. FAILING SCENARIO: Cloud returns 403 on takelogin.php. The kinozal reads status=empty, error=None. That BOB-172 signature exactly: a refusal to the user as an empty result set. CONTINUING establishing this is an oversight, not a choice: the rutracker and nnmclub login DO set diagnostics (upstream_captcha_auth_failure), and the iptorrents login falls through to the search fetch where BOB-172's new guard catches it. Kinozal one leg with neither. FIX DIRECTION: _classify_upstream_http_status(login_response) before the early return, or an authentication diag for the status-in-(200,301,302)-based case. ACCEPTANCE: a stubbed 403 on login endpoint produces a non-None status the kinozal chip, with a RED captured the pre-fix code first (11.4.115). 140 Fixed (→ Fixed.md) Bug — BOB-179 — WHAT: download-proxy/src/api/

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					routes.py:727-745 sets status=captcha with a hardcoded message naming R 'RuTracker requires CAPTCHA. Use /a rutracker/captcha'. FAILING SCENARIO: search returns zero results and the c flavoured diagnostic came from NNM Turnstile, not RuTracker. The user is a RuTracker captcha endpoint for an problem. SEVERITY BOUNDED: the fu and tracker_stats travel in the same r payload, so the truth is present and a reads them is not misled -- only the h wrong. The branch was revived by B error propagation (correctly: suppress propagation would recreate the same one layer up, 11.4.247) and is already the routes layer by tests/unit/api_layer test_routes_coverage.py:782. FIX DIR derive the message from the tracker(actually erred rather than hardcoding SCOPE NOTE: api/ was owned by a si stream during BOB-172; the author w not to touch it. ACCEPTANCE: an NNM captcha diagnostic on a zero-result s produces a headline naming NNMClu High Fixed (→ Fixed.md) Bug — — WHAT: scripts/ generate_markdown_exports.sh accept arguments. It unconditionally scans PROJECT_ROOT/*.md, docs/ recursively scripts/ recursively (scan loops at line 105/111/116 as of 2026-08-23; they were when this was filed — line numbers 1 the BOB-169 fix, the substance is unclear was independently verified by executing invoking the generator with an explicit produced an out-of-scope export and requested one), and PROJECT_ROOT is from BASH_SOURCE (line 17). A caller writes 'bash scripts/ generate_markdown_exports.sh docs

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					file.md' gets a WHOLE-TREE run with argument silently discarded. WHY IT the caller reasonably believes the run scoped to one file. It was not. In a sha checkout with parallel work streams regenerates any export whose .md is its derived files anywhere in the tree artifacts in other streams' scopes and BOB-068 auto-commit hazard, into a stream's commit. CLASS: a false afford script's interface implies a capability have (11.4.201: an interface must make claims). FIX DIRECTION: either accept path arguments and honour them (so run to exactly those files), or REFUSE clear message when arguments are passed. Silently discarding them is the one option must not remain. ACCEPTANCE: pass either scopes the run to it, or exits not naming the unsupported argument. A capturing today's silent-discard behavior (11.4.115). LIVE INSTANCE, MEASUREMENT 2026-08-23 (this is no longer hypothetical). During the BOB-169 fix the conductor the generator with an explicit path to ONE document. The argument was discarded and the whole tree was scanned. It got docs/qa/BOB-174/DESIGN_DECISION.{html,pdf,docx} at 11:50 -- a SIBLING document, while that stream's author editing the source (.md mtime 12:00) exports were therefore stale on arrival additionally carried the pre-fix BOB-defect. The sibling author independently reported them as stale in its own hand having no idea another stream had carried them. SECOND-ORDER LESSON worth with this item: the conductor's attempt the blast radius ALSO failed, and failed 'git status --porcelain \\\ grep -E "(html pdf docx)"' returned only its own files and read

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
142	Medium	Fixed (→ Fixed.md)	Task	—	but docs/qa/BOB-174/ is an UNTRACKED DIRECTORY, which porcelain collapses to a single line, so the grep was structurally incapable of seeing the files inside it (a): matched the wrong surface; the count read as absence). The instrument that it is 'find BOB-182 — OPERATOR DECISION (2 §11.4.66 interactive clarification): MONOTONE RATCHET §11.4.224(E) adoption answer, recorded as consumer the adoption model for CM-EXPORT-C VALID is the MONOTONE-DECREASE. The count may only go down, never up. Immediate hard floor, changed-code-deadline, and per-corpus phase-in were offered and NOT chosen. This closes BOB-182 — the half that was genuine operator's. THE REMAINING HALF IS DEFECT STILL OWED: BASELINE is a constant, so the ratchet does not actually — on improvement the gate PASSES the value to lower it to, but nothing less and the gate keeps permitting regression the original count after the corpus has must NOT collapse §11.4.249 role separator gate that writes its own threshold during build run becomes a PRODUCER as well GATE. Acceptable shapes include a per-baseline the gate READS but never writes lowering via a separate explicitly-invoked command, or a gate that FAILS loudly if live count is below baseline so drift becomes actionable refusal. This answer is recorded consumer DATA per §11.4.35 — it is the operator's stated choice, not an agent's and supersedes any prior agent-chosen on this question. Options not chosen above so a future reader does not re-settled call (§11.4.112(5) bounded-ver

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					discipline applied to decisions). — pr text follows — WHAT: CM-EXPORT-C VALID (pre-build invariant 50) adopt pre-existing violations via a monotone ratchet rather than a hard floor. Two owed. (1) THE ADOPTION DECISION OPERATOR'S, NOT THE SCRIPT'S. 11.4 requires the brownfield adoption qu SURFACED to the operator and the an recorded as consumer DATA – never ratchet. What exists today is a header plus a BOBA_EXPORT_CHARSET_BAS override: that DOCUMENTS a decisio made, it does not RECORD an answer operator gave. The independent revi judged the choice defensible and wor reverse it (a hard floor on 301 violati the build unreachable, which 11.4.23 11.4.101 favours the reversible option correctly held that it is not yet compl Options for the operator: immediate (BASELINE=0) / keep the monotone r corpus phase-in / changed-code-only scheduled full-corpus deadline. (2) TH RATCHET DOES NOT ACTUALLY RAT BASELINE is a hardcoded constant. C improvement the gate PASSES and PR value to lower it to, but nothing lower gate keeps permitting regression all t back to 301 after the corpus heals. Th now says tightening is MANUAL rather claiming automatic behaviour that d exist (11.4.6), but the honest statemen stopgap, not the fix. WHY IT WAS NO WITH THE FIX: a gate that writes its threshold during a pre-build run bec PRODUCER as well as a GATE (11.4.24 separation), and that is a design char operator should approve rather than a side effect. ACCEPTANCE: the opera adoption answer recorded as consum

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
143	High	Fixed (→ Fixed.md)	Bug	—	and either a persisted baseline the ga and never raises (with the role-separ question answered), or an explicit de manual tightening is acceptable. BOB-183 — The compiled Angular bu shipped at download-proxy/src/ui/dist/ browser still carries the BOB-164 col defect verbatim: scanned 2026-08-23 21 violation nodes on darcula/dark a darcula/light, while the same sources scratch path report 0 across all 16 pa mode combinations. The fix is theref at the SOURCE layer and absent at th layer, so §11.4.108 layer 2 is NOT clos users still see the low-contrast dashb compounding facts make this silent n obvious: dist/ is gitignored, so the div never shows in a diff; and scripts/ins asserts only that the directory EXISTS that it is newer than the sources it w from, so a stale bundle passes install unchallenged. Acceptance: install (or equivalent gate) FAILS on a bundle o sources, the bundle is rebuilt, and do BOB-164/axe_contrast_scan.py run ag download-proxy/src/ui/dist/frontend/ exits 0 with zero violation nodes and blocking incomplete nodes. BOB-186 — workable-items diff retur and the verdict “DB and Markdown a on a PARTIAL read: invoked with –iss without –fixed it compared 77 Markc against 184 DB items and called that printing both mismatched counts in output while 107 DB items were neve compared against anything. 					against 184 DB item(s))". The 11.4.201(4) null: a partially blind instrument returns. IMPACT — CORRECTED 2020 original filing OVERSTATED this. I was CHECK 2 of the 11.4.106(F) commit se exposed. It was NOT. scripts/hooks/do commit-seam.sh:277 passes BOTH –is –fixed, and a repo-wide sweep found executable caller that breaks: the two callers (that seam and pre_build_verification.sh:549) both paths; the single-path hits are prose c files plus a static-scan test fixture. So was real and latent, never live in this. The corrected claim is: any FUTURE s caller would have been silently mis-t PROVENANCE, twice corrected. A suk attributed the false-null to the no-pat which actually refuses correctly; the re-measured and relocated it to the p Then the fixing agent corrected the c on impact. Both corrections are recor neither wrong version propagates. F (uncommitted, constitution submodu to upstream tip 7f16739 before edit p Design: refuse by default (11.4.201(4) narrow per-tracker comparison PRES behind an explicit –partial-scope rath deleted (deleting an existing docume capability would be an 11.4.122 silen mirroring how –db-only preserved th Markdown shape. Keyed on MEASUR content, never on flag presence — a zero Fixed rows IS fully accounted fo alone and still passes, so flag-keying traded the false-null for an 11.4.201(positive refusal. Resulting property: ‘ reachable only when the two printed account for each other. RED 4 fail/5 p GREEN 9/9; paired 1.1 mutation is the

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					revert, killing exactly the 4 defect-gu while the 5 preservation tests stay gr now refuses naming “107 item(s) loca Fixed (supply –fixed)”, the 107 confir an independent sqlite3 count (107 Fi Issues = 185). Incidentally closed an 1 gap: case As refusal had no test anyw TestDiffCmd_NoPathsStillRefuses nov OPEN: –partial-scope is the agents na choice, not an operator decision, and is cheap now and expensive after oth consumers adopt it. Other consumer shared submodule were not swept. C 2026-08-26. Already fixed 2026-08-25 constitution commit 5979128 (“fix(w items): diff claimed ‘in sync’ while 10 went uncomparing”) - only this tracke stale; no code work was owed. ROOT proven from pre-fix source (11.4.6 - f inference): two individually-reasona of sync.go. (a) sync.go:852-863, the re “absent in Markdown” pass, carried d.CurrentLocation == "Fixed" && *f "" { continue } - its own comment d intent, suppress false positives for tra caller never supplied, correct in isola the continue ALSO dropped those rov differences, and nothing compensat sync.go:894-897, the verdict, printed and len(dbItems) - the two MISMATCH numbers - then decided purely on di THE VERDICT PRINTED BOTH NUMB NEVER COMPARED THEM. In one lin 11.4.201(1) false-positive guard silent narrowed comparison SCOPE while t stayed scope-unaware, so the fix for a positive created its 11.4.201(6) mirror CLOSED ON BEHAVIOURAL EVIDENCE reading the commit (11.4.226 eviden closure): the shipped binary now REE partial-scope verdict instead of repor

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
145	—	Fixed (→ Fixed.md)	Bug	—	sync” - “refusing to report a DB-vs-Markdown mismatch verdict that would silently exclude paths that are not in DB - the supplied Markdown path(s) were not in the account for 122 item(s) located in Fixed-In (→ Fixed.md) -fixed)”, exit 1; with opt-in -partial-scope -reports “PARTIAL SCOPE - N differences between the DB of 201 DB item(s) were NOT compared to the Fixed-In. The phrase “in sync” is structurally understood on a partial read. Regression suite sync_diff_partial_scope_test.go (9 tests) was added with the fix. INSTRUMENT VALIDATION (11.4.201(7)(b)): negative control: regenerating Markdown from a copy of the Fixed-In “in sync (201 against 201)” exit 0, so that it is not stuck-on-FAIL. Needle A (flip Bob) detected exit 1. Needle B (delete BOB-067 on the FIXED leg - the defect was blind to) detected as “in sync (200 vs 201)”, DB, absent in Markdown” (200 vs 201). Each needle byte-verified applied before the test was running. HONEST GAP (11.4.6): UNKNOWN whether the shipped binaries are byte-verified reproducible from HEAD source - the test was rebuilt. Both were proven to carry the same and behave identically on the real code. This is the behavioural evidence this close to the code. No claim is made about classes diff or compare (revision headers, *_Summary). BOB-189 — WHAT: the fail-open scan shape-(A2) heuristic cannot distinguish ‘return False’ meaning PROCEED-AS-IF-FINE from ‘return False’ meaning REFUSE. It flags textbook fail-CLOSED guards as fail-open defects: _is_safe_fetch_url (x3), _qbit_add_succeeded (x2), and the home boundary guard. INDEPENDENTLY VERIFIED 2026-08-25 by the conductor rather than on the triage agent’s word: download api/routes.py:1122 defines _is_safe_fetch returning bool, and its only call site a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
146	—	Fixed (→ Fixed.md)	Bug	—	reads 'if not _is_safe_fetch_url(url): logger.warning(Refusing SSRF-unsafe URL (non-public target); skipping); False return REFUSES the URL. WHY IT MATTERS: per §11.4.201(1) a false-positive refusal is a FAIL-bluff of equal severity to a negative pass, and here the consequence is worse than noise - acting on the finding means making the SSRF guard stop rejecting False, i.e. deleting an SSRF protection gate. A gate that instructs you to remove a security control is actively dangerous, not merely imprecise. REPRO: run the fast scan; observe six hits; read each call. ACCEPTANCE: the scanner distinguishes shaped from proceed-shaped False requests site-aware, or an audited waiver list entry justification), the six drop out, a golden-FALSE fixture containing a request closed guard is added so the discriminator itself falsifiable per §1.1. BOB-190 — WHAT: ~/.local/lib/python3 packages contains binaries built for the cpython-313 ABI while the interpreter is 3.14, so pydantic_core and rpds fail to load and every test importing FastAPI dies at import time. CONFIRMED NOT OURS: an unrelated file fails identically, so this is environmental, pre-existing. WHY IT MATTERS: CLAUDE documents 'python3 -m pytest tests/unit/ -import-mode=importlib' as the canonical invocation and that documented command currently cannot run - docs and host have the §11.4.99 misguidance class at the environment layer. scripts/run-tests.sh sidesteps it by selecting .venv/bin/python working path exists and simply is not in docs tell a reader to type. IMPACT: any following CLAUDE.md literally concludes the suite is broken; worse, an agent could

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
147	—	Fixed (→ Fixed.md)	Bug	—	green by rewriting tests. ACCEPTANCE repair the host site-packages so the d command works, or correct CLAUDE TESTING.md to name the venv interp canonical - decided explicitly, not left whoever hits it next. Discovered out- the fail-open triage agent, so per §11.4.2 also owes a coverage-escape note: no check asserts the documented test in actually runs. BOB-193 — WHAT: in download-prox streaming.py the dedup set is written the yield — seen_hashes.add() / seen_hashes_local.add() execute at :3 ahead of emitting. If format_event ra result is never sent AND its hash is al recorded, so it is permanently dropp Independently verified by the §11.4.2 reviewer at both sites: mid-search th persists across subsequent polls so th never re-emits; at completion the str immediately after, so there is no later either. Results later in the SAME batch yet added and do re-emit on the next is why the observed symptom is part rather than total. WHY IT IS FILED SI the §11.4.252 fail-open pass made thi OBSERVABLE by adding a log line, wh right first move — but observability i repair. The underlying at-most-once s remain, and per §11.4.226(5) a mitiga close the defect it mitigates. THE DEC REAL TRADE, not an oversight to cor moving to add-after-successful-yield least-once, but a DETERMINISTIC ser failure would then retry the same re every poll forever — trading silent lo loop. Options are (a) keep at-most-on the log line as the contract, (b) add-at successful-yield with a bounded per-

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
148	—	Fixed (→ Fixed.md)	Bug	—	budget, (c) add-before-yield but remove on emit failure so exactly one retry of ACCEPTANCE: an explicit decision re-implemented, and covered by a test t raising emit and asserts the chosen s with a RED observed first per §11.4.1 as MINOR-1 by the independent review fail-open batch; filed rather than abs the residual defect is not retired along logging that revealed it. BOB-195 — OPERATOR DECISION (2 §11.4.66 interactive clarification): 7 SCANNER With NODES — KEEP SIM §11.4.252 fail-open scanner is FIXED contextlib.suppress; ruff’s SIM105 r ENABLED in pyproject.toml. Disabling and the belt-and-braces both-at-once were offered and NOT chosen. Ration with the decision: fixing the gate mal harmless, whereas disabling SIM105 would leave the gate blind to any sup written by hand, inherited from a de style, or already present in the tree. I BEHAVIOUR: with contextlib.suppre and with suppress(...) (the from co import suppress binding) wrapping a dangerous-combination call are DET the same severity and message shape except/pass form; a narrow suppress(SpecificError) around a N dangerous call must NOT fire, since a positive refusal is a §11.4.201(1) FAIL equal severity to a missed real one. CONSEQUENCE FOR THE NUMBER: c the scanner’s finding count stops bei over try/except shapes and becomes census — any prior count citing com was scoped to try/except only. This a recorded as consumer DATA per §11. the operator’s stated choice, not an a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					inference, and supersedes any prior chosen default on this question. Options chosen are named above so a future case not re-litigate a settled call (§11.4.112) bounded-verdict discipline applied to — prior item text follows — WHAT: the §11.4.252 fail-open scanner matches shapes (A1)/(A2). contextlib.suppress node, so a swallow written that way . VERIFIED BY THE CONDUCTOR with needle through the same invocation (§11.4.201(7)(b)), because a first attempt returned 0 for BOTH forms and was the gate takes –root, not a positional, path exits on an unknown arg (§11.4) the invocation path is part of the inst Correct run: try/except/pass around os.unlink(user_supplied_path) -> ‘FAIL’ swallowed exception ... :5’, the needle contextlib.suppress(Exception) around IDENTICAL call -> ‘PASS - no swallow exception ... anti-patterns found’. Both untrusted input with an irreversible both swallow everything; one is caught is not. WHY IT IS WORSE THAN A PL pyproject.toml enables ruff’s SIM rule SIM105 is ‘use contextlib.suppress in except-pass’. Our own linter therefore authors to rewrite the form this gate into the form it CANNOT. The two too pulling in opposite directions and the runs more often. Every SIM105 autof shrinks this gate’s coverage while the down, which reads as progress. CON FOR THE NUMBER: the scanner’s find is a FLOOR over try/except shapes, not of swallows. Any statement of the form open sites remain’ must be read as ‘Not except shapes’. ACCEPTANCE: the scanner recognises contextlib.suppress (a Win items call contextlib.suppress with a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
149	—	Fixed (→ Fixed.md)	Bug	—	exception type) and applies the same capability test; a golden-TRUE fixture suppress form; a golden-FALSE fixture suppress wraps a single-capability diagnostic-emitter and must NOT fire; and an exception decision on the SIM105 tension - either the shapes this gate governs, or accept and teach the gate to read it. Discover §11.4.252 remediation agent when its MINOR-3 fix required using contextually at three diagnostic-emitter sites; those are legitimate and justified in-source BOB-197 — OPERATOR DECISION (2 §11.4.66): GENERATE THE TOKEN A IT The conductor generates a 32-byte token and writes BOBA_API_TOKEN in the operator configures clients with it 2026-08-26: token generated via secrets.token_hex(32), appended to .env comment naming BOB-197 and the re-env-gating fact, chmod 600, value shared operator ONCE and never written to file. Safety verified BEFORE writing (§11.4.10): .env matched .gitignore:27 was untracked (needle-proven — the matcher confirmed docker-compose. tracked, so the negative is real); a \$9. backup was taken and is itself ignored write re-check confirmed .env still ignored absent from git status. Pre-store audit only tracked BOBA_API_TOKEN= occurred are the docker-compose passthrough {BOBA_API_TOKEN:-} and prose in the challenge — no literal value has ever committed. STILL OWED, and the iteration open until it lands: the BOOT-TIME II (§11.4.254) that refuses to start LAN-I when the token is unset or empty. Warning is a state fix, not a defect fix - §11.4.226(5) is explicit that a state-on

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					cannot close a defect item. Options n operator sets it themselves with the i blocking until then; invariant warns blocks on a named date. Recorded as DATA per §11.4.35 — the operator's s choice, not an agent inference. Optio chosen are named so a future reader re-litigate a settled call. --- prior item --- OPERATOR DECISION (2026-08-26) BOBA_API_TOKEN and keep 0.0.0.0, b BOOT-TIME invariant that refuses to bound with the token unset. This iter invariant. MEASURED FACT, not infer download-proxy/src/api/routes.py:83 require_api_token() reads BOBA_API request time and returns immediate unset or empty. Its own docstring sta plainly: "BOBA_API_TOKEN unset/em return (OPEN). This is the DEFAULT a preserves the current no-auth contra workflow". docker-compose.yml:237 BOBA_API_TOKEN=\${BOBA_API_TOK the container inherits empty unless t declares it. The operator .env does N it, needle-verified per 11.4.201(7)(b): matcher hit QBITTORRENT_DATA_DI same file, so the miss is a real absenc blind read. The qbittorrent-proxy co RUNNING and LAN-bound at measur time. Consequence: the ten routes th guard resolves as auth-wired are ope practice on a default deploy. WHY A GATE CANNOT COVER THIS. The BOB asserts static route WIRING - that a Depends(require_api_token) marker handler, decorator or router. It canno runtime ARMING, which depends on read per request. Claiming the static it would be exactly the bluff the gate prevent (11.4.262: machine evidence match the layer it claims). This is a b

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
150	—	Fixed (→ Fixed.md)	Bug	—	invariant class per 11.4.254. ACCEPTANCE: a boot-time check that, when the listener is bound (not loopback), refuses to start if it receives a non-zero exit and a named cause if it receives BOBA_API_TOKEN is unset or empty, the state becomes UNREACHABLE rather than the default. Paired 1.1 mutation: remove the check that prove the service starts LAN-bound-and-a-golden-FALSE per 11.4.201(1): a loopback listener with the token unset must NOT be refused, or the check becomes a false refusal blocking legitimate dev work. COVERAGE-ESCAPE NOTE: found by reading source during BOB-102 guard construction, NOT by the automated test which is itself the defect class 11.4.23. The boot-time check IS the new automated check that would have caught it. BOB-198 — OPERATOR DECISION (2 §11.4.66): REFUSE TO START LAN-B Go profile gets a boot-time guard: bind only, or refuse to start. It does NOT go through middleware in this cycle. Rationale for the decision: the profile is opt-in via -dev was not running when measured, and -dev for development — so closing the experiment with a guard rather than a parity implementation. Options not chosen: write auth middleware with parity with the Python route set (realized it would partially un-defer BOB-101); dev-only with no guard (rejected — not enforced, and the next -profile would enforce it, and the next -profile would silently re-opens 22 round-trips. ACCEPTANCE: a boot-time check that the listener's bind address and refuses to start when it is not loopback, with a paired 1.1 mutation proving the check FAILs on loopback bind, and a golden-FALSE proving a loopback bind is NOT refused (§11.4.201(1)). So the reminder recorded so it is not lost: the

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					covered by BOB-101's parity deferral about ports; folding it in would be a §11.4.35 — the operator's stated choice agent inference. Options not chosen so a future reader does not re-litigate call. — prior item text follows — MEA conductor-verified independently of reporting subagent. qBitTorrent-go/cqbittorrent-proxy/main.go registers three middlewares, at lines 62, 63 and middleware.CORS, middleware.Logging middleware.GinRateLimit. There is no authentication middleware and no password auth dependency. main.go:119-121 bind addr=":" which is ALL interfaces, so it is LAN-reachable when the profile runs 22 routes, of which the mutating ones are most - POST /api/v1/download, POST /api/v1/magnet, DELETE /api/v1/hooks/:id, POST /api/v1/schedules. A LAN peer can queue downloads and delete webhooks with configuration with no credential. PAM is stated as fact: PUT /api/v1/theme is available to the Python service and open in Go. The asymmetry holds for the download, but not for schedules mutations. Two implementations of one advertised surface disagree about whether it needs a credential. RELATIONSHIP: BOB-101 (Go parity deferred past v1.1.1 operator decision 2026-08-26): that decision covered PORT parity - the Go container listens on :7186 and :7188 as well as :7187. It did not cover an authentication hole, and the hole was not asked about one, because the hole had not been measured when the question was posed. Treating this as covered by the decision would be a 11.4.112(5) verdict leak: the decision is a bounded decision outside the scope of the decision supports. This item stands separately from the decision severity is NOT settled by BOB-101. M

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					FACT, so severity is not overstated: the measurement time (the container list qbittorrent-proxy, the Python service Go sibling). The exposure is latent, not ACCEPTANCE: either auth middleware the Go service with parity to the Python set, or an explicit operator decision re the Go profile as dev-only that must not start LAN-bound - with a guard enforcing whichever is chosen. BOB-199 — OPERATOR DECISION (2 §11.4.66): FLAG NARROW SUPPRESS WITH AN IRREVERSIBLE CAPABILITY scanner flags a narrow contextlib.suppress ONLY when combined with an irreversible capability (delete / truncate / kill) — that actually causes harm. Idiomatic tolerances stay quiet, so the gate keeps credibility and no false-positive storm readers to ignore it. Options not chosen the asymmetry permanently with a hard statement; flag all narrow suppress all existing sites via a justified exemption MEASUREMENT CORRECTED TWICE, second correction explains the first: the '37 narrow sites, all idiomatic' was produced by this conductor without verification measured by the authoring agent as CONTAMINATION (§11.4.201(10)) — 2 third-party + 9 sibling-agent worktree the very tree being measured + 1 real instrument was counting other agent duplicates of its own subject. Reproduced figures, each with its scope stated: core repo 0 narrow with-suppress; boba DANGER_ROOTS 0 narrow with-suppress narrow except-pass; boba repo minus 1 narrow with-suppress (a suppress) narrow except-pass RETRACTED-AND

					follows — RESIDUAL ASYMMETRY su the BOB-195 fix, reported rather than closed. After teaching the scanner W BROAD suppress (Exception / BaseEx detected with the same severity as tr pass. A NARROW suppress (suppress(FileNotFoundError)) is not semantically identical narrow try/ex FileNotFoundError: pass IS flagged. S SIM105 rewriting a narrow handler s that site out of the gate's scope, a sma of the exact mechanism BOB-195 was close. WHY IT WAS NOT CLOSED IN 7 with the measurement that decided i authoring agent reported 37 narrow sites, all idiomatic. CORRECTION (202 independent review): that figure DO REPRODUCE and this conductor prop into this item as fact without verifyin error is mine, not the reviewer's. Me constitution repo has 0 narrow with sites; boba first-party has exactly 1 (a suppress(OnError)). The nearest corp 35 narrow except X: pass handlers i party - a DIFFERENT construct - and census (OnError x7, ImportError x7, BrokenPipeError x3, RuntimeError x ValueError x2, FileNotFoundError x2 IndexError x2, SystemExit x2) contra one idiomatic': a bare SystemExit: pa benign tolerance. The two population be conflated, and the distinction is th substance of this item. The false-posi argument therefore rests on the 35 n except-handlers, not on 37 suppress : strength should be re-judged on that which under 11.4.201(1) is a FAIL-bl severity to the gap it would close, and practice because it trains readers to i gate. The subagent recorded the asyn the gate header as a known gap rather

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
152	Medium	Fixed (→ Fixed.md)	Bug	—	shipping the storm. That was the right is why this is a separate tracked item an unfinished one. THE DECISION IS OPERATOR'S, mirroring BOB-195 itself accept the asymmetry permanently, gate header stating it so no reader m count for a census; (b) flag narrow su ONLY when combined with an irreve capability (delete / truncate / kill), cat shape that actually matters and leavi idiomatic sites quiet; (c) flag all narrow and absorb the 37 via a justified exer like the LAN-route guard uses. RELAT worth carrying: the five newly-visibl production sites in download-proxy/ merge_service/search.py (1294, 1303, 1333) wrap proc.kill / os.killpg / proc. BOB-126 cleanup path. The conductor the 11.4.263 pgid guard IS present an both killpg sites - _pid and _pgid each isinstance(int) and > 1 before the sys the BOB-126 forensic reasoning inlin sites are true-by-the-scanner's-defini SAFE in fact, and want a justified exe entry rather than a code change. BOB-200 — WHAT: scripts/gates/ cm_dangerous_combination_fail_clos builds its scan file list with find(1). If DIES (permission error, resource exh interrupted), the gate receives an EM and interprets that as 'no files in scop topology SKIP -> exit 0. The failure IS stderr but SILENT in the exit code, so gating on exit status reads a dead ins a clean corpus. WHY IT MATTERS: th textbook 11.4.201(6) FALSE-NULL – a instrument and a clean artifact retur identical quiet zero. It is also a 11.4.2 OPEN on exactly the 'cannot enumer corpus' condition where the gate's ov

153	Medium	Fixed (→ Fixed.md)	Bug	—	discipline is to fail CLOSED. A gate the see must refuse, not pass. AFFECTED constitution/scripts/gates/cm_dangerous_combination_fail_close find invocation and the empty-list br EXISTING – NOT introduced by the B change; found by the independent re reviewer while reviewing that chang explicitly scoped OUT of its remediati REPRODUCTION: make find(1) fail du gate run (unreadable scan root, or a returning non-zero with empty stdou observe the gate exit 0 with a topolog message, indistinguishable from a ge empty corpus. ACCEPTANCE: (1) the g distinguishes ‘find succeeded and fou files’ from ‘find failed’ – check find’s not only its output; (2) a failed enum FINDING (non-zero exit) naming the precondition, never a SKIP; (3) a gen empty scan root still SKIPs honestly a the 11.4.201(1) golden-FALSE guard, s does not become a false-positive refu paired 1.1 mutation: restore the swal failure behaviour and the new fixtur BOB-201 — WHAT: scripts/ownership fences declared scope entries LEXICA normalisation + prefix/traversal refu lexical fence cannot see a symlink sit INTERMEDIATE path component. A s (already-present, no race required) s the middle of an otherwise-legal decl steers the recursive walk at a tree the never declared. Measured by the T02 independent reviewer as surviving n M5. WHY IT IS FILED SEPARATELY: t honest-boundary note and Case 24 fi this reach is ‘tracked as BOB-159’. It i VERIFIED 2026-08-26 by direct query description is 4685 chars with ZERO

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					of 'symlink' or 'intermediate' (control the body is readable through the same path), and no item in the tracker record reach at all. A dangling tracker citation real defect is recorded NOWHERE - the lost-defect shape, where the pointer has coverage and is not. This item IS that in-source note must now cite THIS id SEVERITY BOUNDS, stated honestly (reach is BOUNDED, not arbitrary. It reaches attacker or accident to have already symlink inside a declared scope path reachable from the shipped config/owned_paths.yaml as it stands (shipped control needle: 6 rows, RC=0). It is a widening of what a recursive chown is not a theoretical one - the reviewer needs no race needed. WHAT THIS ITEM DOES CLAIM: that the lexical fence is broken fence does what it says - it refuses lexical escapes ('/', system trees, '..' climbs) and verified doing so under 12 reviewer-mutations. This is a documented LIMB fencing, now recorded as a real item citation to an unrelated one. ACCEPT to decide deliberately and record the decision resolve components (realpath/-P semantics re-fence the resolved path, OR keep the fence and state the limit as an accepted operator-owned risk; the choice is operator-owned per 11.4.66 because resolving fences depend on filesystem state at creation which has its own failure modes; (2) if resolution is chosen, a golden-FALSE legitimate symlinked-but-in-scope does roots still walk (11.4.201(1) - a fence that refuses is a FAIL-bluff of equal severity in-source note and the Case 24 fixture item, not BOB-159; (4) paired 1.1 mutation

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
154	Medium	Fixed (→ Fixed.md)	Bug	—	restore the un-resolved behaviour and fixture MUST fail. BOB-202 — WHAT: scripts/ownership_repair.sh:493 reads parse rows with 'while IFS=\$'\t' read -r e_p e_opt e_pres e_rec'. A scope entry that 'kind' emits the row '<path>\t\t1\t0\t1 IFS-WHITESPACE character in bash e IFS is set to it explicitly, so a RUN of c tabs collapses into ONE delimiter ins delimiting an empty field. Every field omission shifts left by one. MEASURE 2026-08-26 on GNU bash 5.2.37, contr (the with-field case was run FIRST ar output, proving the instrument sees; probe of mine returned nothing for I because printf lacked a trailing newl 11.4.201(7)(b) false-null I discarded r reported): kind PRESENT: path=[P] k opt=[1] pres=[0] rec=[1] kind EMPTY: kind=[1] opt=[0] pres=[1] rec=[] CONS 'optional' is read out of 'preserve_mo entry declared 'optional: true' is ther treated as NON-optional, so an absen should skip honestly instead become failure - and 'preserve_mode'/'recurs likewise read from the wrong slots, v 'recursive' arriving EMPTY. The shift parse error, no diagnostic, no refusal REACHABILITY: NOT reachable from shipped config/owned_paths.yaml - a declared entries carry 'kind' (verified latent defect in the reader, not a live misbehaviour of the product today. PROVENANCE: surfaced out-of-band round-5 remediation agent while iso unrelated instrument slip, and delibe unfixed and unfiled by it because (a) ownership_repair.sh had to stay at ha ae025b74602414ca for that round's d

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					regress set, (b) it was outside that round, (c) it was not NIT remit, and (c) it had not root-caused. Whether the repair belongs in the parser, consumer, or the schema. That judge is correct; this item is the filing it deferred. Independently re-measured by the consumer before filing - not accepted on report. COVERAGE-ESCAPE NOTE: no automated found this. It was found by a human-agent isolating a different problem. For the coverage gap is itself a defect of understanding to the bug, and closing only the violation. ACCEPTANCE: (1) root-cause correct layer - parser (never emit a read empty field), consumer (read with a read that is not IFS-whitespace, or read parser or schema (make 'kind' mandatory as an entry lacking it, consistent with the run refusal already landed for empty expansions); the choice is operator-or-11.4.66 because it changes the scope-contract; (2) a fixture with an omitted 'optional: true' asserting the entry is OPTIONAL (or the row refused), RED against current code; (3) a golden-FA a fully-specified row still parses identical 11.4.201(1), the reader must not start valid scopes; (4) paired 1.1 mutation the collapsing read so the fixture FAI automated check that would have caught 11.4.238. PRECEDENT FOUND 2026-08-21 (surfaced by the T028 round-5 review independently verified before recording SIBLING script scripts/ownership_precondition.sh ALREADY documents this exact collapse class at 565-578 and already ships the repair split_tsv() at line 579 (used at 437, 69) in-source note carries a real forensic measurement dated 2026-08-21: the latest version of that script used the collapse

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					and reported "no compose service m location" for config/ and for the down WHILE FIVE SERVICES MOUNT THEM statement about what was checked, p the instrument rather than the system own comment classifies as the 11.4.2 path is part of the instrument' failure records why the unit suite could not fixture scope has no compose service only running the real invocation aga scope surfaced it. WHAT THAT CHAN THIS ITEM: (a) acceptance-criterion (cause the correct layer' now has a PR rather than an open design question consumer layer, via a split_tsv-style r does not use tab-as-IFS; adopting the existing function is preferable to inv second dialect (11.4.251 - two answer question across two files that read th scope rows is exactly the divergence produced the round-1 'two readers o file disagree' finding); (b) this is a RE of a class already diagnosed and clos this codebase, not a novel discovery - landed in one reader on 2026-08-21 a sibling reader kept the collapsing for the 11.4.238 escape shape at the code lesson was captured in a comment in a check; (c) the 11.4.238 coverage-esc above is SHARPENED - the sibling's o comment already states that a fixture suite cannot see this class, so the req automated check must exercise a row genuinely empty middle field, not m formed one. 155 Critical Fixed Fixed.md) Bug — BOB-203 — M LIVE 2026-08-26 against the running LAN 192.168.1.90 (NOT loopback - qB localhost bypass would have exercise different code path). ALSO VERIFIED G recorded so it is not re-investigated: n unknown branch is handled IDENTIC both consumers (R3 :519-531, R4 :832 both a named SKIP, both return 0, ne refuses), ROOTLESS_VERDICT is cach so both read ONE measurement, and trap golden-FALSE fixture EXISTS (test_ownership_rootless_detection.s drives name=rootless-lookalike insid path and must NOT read rootless; str guard at :396-411 uses exact field equ substring). DISCOVERY CHANNEL (\$1 found by the BOB-206 verification str BOB-212 — WHAT: .gitignore:31 is a c glob <i>credentials</i>, followed by a HAND MAINTAINED per-file allowlist of ! ex (lines 34-50). Any NEW source file wh contains ‘credentials’ (or ‘creds’) is si ignored: git add refuses it and git star NOTHING. The author gets no signal file simply does not exist as far as the path is concerned. HOW IT SURFACE BOB-204 stream authored a RED test credentials_failclosed_test.go. It vani agent noticed only because it went lo the file it had just written. It renamed bob204_failclosed_test.go to escape b <i>credentials</i> and <i>creds</i>, and the file bec visible. A silent deliverable loss, caug rather than by any gate. INDEPEND CONFIRMED BY THE CONDUCTOR, co needle proven: git check-ignore -v -n qBitTorrent-go/internal/jackettapi/ credentials_failclosed_test.go -> .gitignore:31:<i>credentials</i> (IGNORED ignore -v -no-index qBitTorrent-go/in

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					jackettapi/zzz_probe_test.go -> no ma ignored) <- the needle: instrument p seeing, so the hit above is real git che -no-index frontend/e2e/credentials.s -> .gitignore:31:credentials (IGNORED -error-unmatch frontend/e2e/creden -> tracked SECOND, LATENT INSTAN frontend/e2e/credentials.spec.ts is ma the same rule and survives ONLY bec already tracked (git honours the inde over .gitignore for tracked paths). De add it — an ordinary refactor, a bran operation, a file move — and it disap silently. It is one routine operation av being lost. (For contrast, credential-e dialog.component.spec.ts is genuinel covered by the DIRECTORY rule !from app/jackett/credentials/ at line 43, no file entry.) WHY THIS IS A §11.4.201(NULL, NOT MERELY AN INCONVENI blind instrument and the clean tree r identical quiet zero. git status showin means BOTH ‘no new files’ AND ‘a ne but is invisible’. There is no signal th distinguishes them. The commit path thing every other gate’s output event travel through — cannot see its own WHY IT IS NOT SIMPLY ‘ADD ANOTH that is the mechanism that produced A hand-maintained allowlist against glob has the §11.4.251/§11.4.205 shap future legitimate credential-named s needs a hand edit nobody will remen make, and the failure mode of forget SILENT. The same shape as BOB-205’ maintained DANGER_ROOTS: a list th edited in lockstep with the tree, with that notices when it was not. TENSIO RESOLVE HONESTLY (§11.4.10 vs §11 the glob exists for a real reason — §1 forbids credential material reaching

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					broad deny-all is the conservative-sa Narrowing it carelessly would re-ope leak channel. So the fix is NOT ‘delete Candidate directions, operator decisio (§11.4.66): (a) narrow the deny to wh carries secrets — extensions and dire (.env, secrets/, credentials.json yaml enc) rather than every path containin (b) keep the deny-all but add a GATE t when an untracked file matches an ign AND lives under a first-party source r has a source extension, so the swallow loud instead of silent; (c) both. (b) alon false-null even if the glob stays exactly and is the smaller change. ACCEPTAN NEW credential-named source file und party source root either commits norm produces a LOUD refusal naming the blocked it and the remedy — never sil RED that creates such a file and asser current silence, flipping to the loud pa (§11.4.115); (3) a golden-FALSE provin secret material (a .env, a key) is STILL the §11.4.201(1) guard, because a fix t credentials to close a false-null is stric than the defect; (4) frontend/e2e/ credentials.spec.ts is made safe by rul than by the accident of already being t DISCOVERY CHANNEL (§11.4.238): fo BOB-204 stream when its own deliver disappeared — NOT by the automated and not by any gate. Nothing in the re that an authored file actually became git. Coverage-escape audit: no surface this class at all. === SCOPED AND ME 2026-08-26 — RECOMMENDATION (b IS DISPROVEN NOT MERELY DISFAVO TASK 1a — TRACKED FILES SURVIV BEING TRACKED: 3, not 157. A raw s 2795 tracked paths hit 157 ignore rule of those are NEGATIONS (! lines), i.e

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					re-included and safe BY RULE. Report the blast radius would have been a \$1 false positive; the investigating stream this itself. Two independent instrumen ignore -v filtered on non-negated patte bare check-ignore which emits only tr excluded paths) produced IDENTICAL frontend/e2e/credentials.spec.ts — .git credentials* — HAZARD (the known line Playwright spec) 2. tests/security test_jackett_autoconfig_secrets.py — .gitignore:51 secrets — HAZARD, N NAMED IN THIS ITEM WHEN FILE Conductor-verified: matched by :51, c tracked. It is a 113-line SECURITY / PH asserting no credential value reaches body, traceback, or log. Losing it silen remove the test that guards §11.4.10 all glob's own purpose. That is the sh instance available: the rule protectin credentials is one refactor away from the test that proves credentials are p submodules/jackett — .gitignore:260 hazard: mode 160000 gitlink, and tha documented as deliberately inert for CodeGraph per §11.4.79). THE MECH DECIDES THE FIX: the directory nega re-includes the DIRECTORY ONLY. A frontend/src/app/jackett/credentials/credentials.guard.ts is STILL swallow because <i>credentials</i> contains no slash therefore BASENAME-scoped — the a directory buys nothing for new files. safe files, 124 are held by ONE robust negation (!docs/qa//.log) and 13 by fi hand-maintained per-file entries (currently live, none stale — but ea future silent loss). TASK 1b — ALR SWALLOWED UNTRACKED FILES: ignored+untracked paths. Two are losses (the tracker-credentials exp

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					and the BOB-124 .txt evidence — file (own item); set_password.py is recorded UNKNOWN: provenance and deliberate NOT called lost work; download-proxy/qbittorrent_creds.json is the POSITION CONTROL — shape-inspected keys- (never values) as [password, username] genuinely credential-bearing, CORRUPT ignored. TASK 2 — MEASURED IN A TREE, 10 source paths x 15 secret paths baseline (full 316-line file) swallowed 0 (a) EXACTLY AS THIS ITEM WORKS swallows 0 leaks 3 (a) repaired to those 3 swallows 1 leaks 1 (b) deny unchanged + loud gate swallows 0 (a) LEAKS download-proxy/qbittorrent_creds.json — A REAL CREDENTIAL FILE SITTING IN THE TODAY — because credentials.json match “creds”. It also leaks my_password and service_credentials. Repairing leaves service_credentials: an extensive scoped deny cannot cover EXTENSIVE secret files without collapsing back to deny-all it was meant to replace. So this item worded it is DISPROVEN, disfavoured — and I wrote (a) first candidate list, which was wrong. V NEWLY ALLOWS INTO GIT: NOTHING set is EMPTY. No pattern changes, §11.4.10-vs-§11.4.201(1) proof obligation discharges trivially. No variant of make that argument. TASK 3 — THE tests/security/test_gitignore_swallow_is_loud.sh verified not swallowed BEFORE work joke this item is about). It asserts the acceptance DISJUNCTION (commit OR refuses loudly), so it is FIX-DIRECT AGNOSTIC and leaves the direction operator decision. The load-bearing

					across *.sh/*.yaml/*.py/Makefile out tools/); its README self-declares invoked by the normal start/stop functional commit 2026-04-12. Because FIRST-PARTY, §11.4.224(E) requires exclusion carry a tracked §11.4.19 and the two REAL defects found in tracked regardless of scope, since --update still executes them. Fixed (→ Fixed.md) Bug – B WHAT: cmd/boba-ctl/main.go:498-509 authMethod(). Its default branch (returns remote.AuthSSHKey. A deployment entry whose auth: key is misspelled or set to an unrecognised value then resolves SILENTLY to SSH-key authentication rather than refusing to act. WHY §11.4.252 VIOLATION: this is a creation selection decision on a path that performs remote mutation and external effects. §11.4.252 requires a path >=2 dangerous capabilities to FAIL verify every precondition, refuse unverifiable, and name the unresolved precondition. Silently substituting credential MECHANISM for an unread declaration is the textbook fail-on-the operator's intent was not detected the code proceeded anyway using a may not have chosen. WHY NO GATE three independent reasons, each with its own – (a) cmd/boba-ctl is in NO DANGER_ROOT (BOB-205); (b) even in files are structurally unanalysable current gate (BOB-191); (c) this is semantic default-branch decision, the two text patterns the non-Python match. It was found by a human-equivalent read, which is precisely the §11.4 class. HONEST QUALIFICATION (§11. boba-ctl/main.go has NO_ = err, NO

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					= nil {}}, and NO silentreturn niltoday verified with a control needle again qBitTorrent-go/internal/config/con This finding is the exception, not many; the scope hole around boba-c otherwise LATENT (it hides nothing it guarantees a future one lands u ACCEPTANCE: (1) an unrecognised/em value REFUSES with an error naming offending key and its declared val silently defaults; (2) a RED driven auth: and asserting today's silent resolution, flipping to refusal po golden-FALSE proving every LEGITIM value still resolves correctly – a refusal here would break real depl (§11.4.201(1)). DISCOVERY CHANNEL (§11.4.238): found by the BOB-205 verification stream while confirmi qualifies as a §11.4.252 surface. major Fixed (→ Fixed.md) Bug BOB-216 – WHAT: three carrier clas the gate's PRIMARY mode, not only degraded text fallback. Measured a text_rc=1 (both modes report the h COMMENT or DOCSTRING quoting the c anti-pattern is reported as a LIVE default – both spellings; (b) a / or a string constant holdingtry { x{ } }is reported as an empty catch, o carrier line. Shape (b), and the C half of shape (a), are LANGUAGE-AG GREPS with NO structural counterpa mode – so there is no parser to be WHY IT MATTERS: the gate's header blanket claim that "A parser is im both by construction". That is OVE now corrected in place, scoped to Try/With shapes where it is actual Everything else – every non-Python and the credential/empty-catch tex

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					even on Python – has no AST arm at the immunity never applied there. §11.4.201(1) false refusal in the mode is materially worse than one fallback nobody expects to be exact refuses provably-healthy code on the gate is trusted on. THE CONTROL N SHARPENS IT (recorded so the next inherits the measurement): a #-COM import does NOT poison the licensi (text=0), because those regexes are anchored. So the blindness is to S specifically, not to non-code gene distinction is what makes the comm fix tractable for one class and not others. WHY IT WAS NOT FIXED IN T THAT FOUND IT (§11.4.6 honest bound this is the right call): closing t a PER-LANGUAGE comment-and-string across every configured extension. model's failure direction is the U reporting one – a mis-parsed string silently swallows real violations remainder of the file. The same remade the round DECLINE the triple-counter for OVER-1 while ACCEPTING comment strip for OVER-A: the comm ambiguity resolves toward KEEPING (proven by three control needles – violation + comment, # inside a string escaped quote before # – all 1/1), fence counter's ambiguity resolves DROPPING text. Direction of failure difficulty, is the discriminator. full lexer here would import the u reporting failure mode this gate r everywhere else. OPERATOR DECISIO (§11.4.66 / §11.4.197): whether to language comment-and-string models consumer call, not a default this pick unilaterally. Options: (a) ac

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					over-reports and DISCLOSE them per (what the round did – a new MODE-I CARRIERS section now enumerates al (b) build the models per language under-report risk with a fixture p language; (c) narrow the language-greps so they only fire where a st arm exists, trading coverage for p RELATION TO SIBLINGS (§11.4.214 di similar, deliberately not merged): the gate flagging a fail-CLOSED SS a semantic-role miss in the PYTHON is a CARRIER miss (comment/string code) that is MODE-INDEPENDENT. BO language absent from the ext list All three share the primitive §11. in BOB-191: classify by local synt shape, never consult semantic role fixes differ, so the items stay se ACCEPTANCE: (1) the operator decis is taken and recorded; (2) whichever chosen, each of the three classes fixture proving current behaviour, future change cannot silently alte if (b) is chosen, a golden-FALSE p proving a REAL violation adjacent carrier is still caught – the unde guard, which is the whole risk. D CHANNEL (§11.4.238): found by the round-7 remediation stream while c different finding, NOT by the auto regime and NOT by the independent that audited the same file in round 168 critical Fixed (→ Fixed.md BOB-217 – WHAT: tools/plugin_update_automation.py update combines three §11.4.252 dangerous capabilities and is gated by nothi could stop a hostile payload: - U INPUT: 14 URLs across four GitHub repositories, THREE of which are t

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					PERSONAL repos, not the official q organisation. - MUTATION: writes <name>.py. - DEFERRED CODE EXECUT qBittorrent EXECUTES those engine bytes fetched over the network bec code on the operator's host. The 0 validation is compile(content, "<s "exec") at tools/ plugin_update_automation.py:213 – verified as the sole compile call. SYNTAX check. A syntactically vali exactly what a hostile payload is. NO signature verification, NO pinn SHA, NO hash allowlist, NO provena of any kind. §11.4.252 requires a combining >=2 dangerous capabiliti CLOSED – verify every precondition when any is unverifiable. This pat THREE and verifies none of them. § supply-chain clause is the direct counterpart: dependencies are eith hash-verified, provenance-attested mirrored through a hash-pinning re unattested public source is an int risk, and here the unattested publ becomes EXECUTED CODE. THE SHARPE ABOUT THIS FINDING: the fail-close produced THREE FALSE POSITIVES in file (:189, :198, :215 – all triag POSITIVE, see BOB-214's correction MISSING this, the one genuine dang combination in it. That is the §11 both-directions failure – false-po false-negative – demonstrated insi file. It is the strongest availabl that the detector classifies by lo syntactic shape and never consults role (the §11.4.250 primitive name BOB-191/BOB-216). REACHABILITY, S HONESTLY (§11.4.6): the script is NOTHING – control-needle-proven (9

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					hits, 0 negative control) it is re only by its own README, its own do and a tracker note; zero hits across *.yaml / *.py / Makefile outside to own README self-declares "not in normal start/stop flow". Last function commit 2026-04-12. So this is NOT automated path. It IS reachable by --update, which is exactly what there exists for. Severity is Critical on capability combination, bounded by reachability – not on an active execution path. ACCEPTANCE: (1) plugin source pinned (commit SHA or content hash verified before write; (2) an unverified source REFUSES and names which check (§11.4.252) rather than proceeding syntax pass; (3) the compile() call documented in-source as a syntax check is NOT a safety gate, so nobody reports one; (4) a RED serving a syntactically hostile payload and asserting it is pre-fix-absent / post-fix-present; golden-FALSE proving a legitimate update still succeeds (§11.4.201(1) DISCOVERY CHANNEL (§11.4.238): four concealed-hits triage stream while establishing that the gate's four in this area were false positives. No automated QA regime – and the region pointed here reported the wrong thing 169 major Fixed (→ Fixed.m – BOB-218 – WHAT: tools/README.m "the backup is restored" on validation failure. Conductor-verified: shutdown appears EXACTLY ONCE in tools/plugin_update_automation.py and FORWARD only – a reverse-direction has ZERO occurrences (grep control proven seeing: needle 2 hits, negative control 0). The plugin write opens

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					"w", which TRUNCATES IMMEDIATELY. OBSERVABLE HARM (the reason this is merely a doc defect): a failure path through the write leaves a TRUNCATED IMPORTABLE plugin on disk. The operator told the update FAILED and reasonably concludes the previous file survived because the README says it was restored was not. The next ./install-plugin copies the corrupt file into config/qBittorrent/nova3/engines/ and that search engine SILENTLY STOPS WORKING. The .bak name to recover DOES exist on disk; the tool mentions it and never uses it. The §11.4 documentation-layer bluff with downstream consequence: the doc as a safety property the code does not implement and the operator's recovery decision on that false assertion. SECOND, DIVERGENCE: the README claims JSON to stdout; :274 writes it to a FILE (open(args.output, "w")). THIRD, MINOR DEFECT in the same file (recovered rather than as its own item because of the file and the fix window): _extract_version at ~:198 uses a BAREexcept:, so a Ctrl-C during the sweep is SWALLOWED. That is a significant defect, not a fail-open – the gate is on this line, but for the wrong reason: the silent default return; the reason is the bare except catching KeyboardInterrupt. ACCEPTANCE: (1) either the rollback is IMPLEMENTED (restore the .bak on failure) or the README claim is DELETED – the code must agree (§11.4.6); if implemented, write to a temp file and rename at the end rather than truncating in place; (2) the stdout-vs-file claim corrected; (3) the except narrowed so KeyboardInterrupt propagates; (4) a RED that fails to

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					mid-way and asserts the previous p intact (post-fix) / truncated (pre REACHABILITY: same as the sibling hand-run only, not in any automate last functional commit 2026-04-12. Major on the harm shape, bounded b reachability. DISCOVERY CHANNEL (found by the concealed-hits triage Not by the automated QA regime. minor Fixed (→ Fixed.md) Bug BOB-220 – WHAT: scripts/ ownership_repair.sh:891-895 runs c intending to strip setuid/setgid b live: the chmod RUNS and SUCCEEDS, mode stays 2755. Root cause measur chmod with a 3-DIGIT symbolic-equi octal PRESERVES the setgid bit on DIRECTORIES; only a 4-digit form (an explicit g-s clears it. The com :868-884 describes a strip that do occur for directories. EFFECT: be – the surviving setgid bit is not harmful, and no defect is known to from it. This is filed as a §11.4. defect: an in-source comment asser behaviour the code does not perfor matters because the next reader wi it, and because a future security- strip written against the same pat silently fail the same way. RELAT BOB-207: the same stream measured repair a new file inherits gid 100 SETGID BIT STILL SET – the two fac compound. If BOB-207 is resolved b the repair (the recommended direct setgid survival becomes moot for t but the misleading comment remains ACCEPTANCE: (1) either the strip i (00755 or g-s) or the comment is c state that directories retain setg and comment must agree; (2) if mad

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					RED asserting mode 2755 -> 0755 on directory, since the current form no-ops; (3) golden-FALSE proving a that SHOULD keep its mode is not g changed. DISCOVERY CHANNEL (§11.4 found by the BOB-207 stream while unrelated behaviour. Not by the au regime. 171 critical Fixed Fixed.md) Bug – BOB-221 – WH scripts/pre_build_verification.sh 30 (CM-BASH-UNIT-TESTS-EXECUTED) e suites by FILESYSTEM GLOB (:1196) fail() on any non-zero exit. It th RUNS untracked suites, and it has of a test that is SUPPOSED to fail MEASURED: tests/pre_build/ test_bob205_danger_roots_scope.sh correctly, because it is a RED tes BOB-205, an unfixed defect. Invari counts that as a gate failure. The T042 verdict is FAIL, and this is three blocking causes. THE STRUCT PROBLEM: §11.4.115 and §11.4.224 R RED authored FIRST and OBSERVED TO before the fix exists. §11.4.135 r RED to persist as the permanent re guard. So the discipline mandates failing tests exist in the tree be authoring and fixing – and the blo treats their existence as a defect the constitution correctly makes t refuse the commit. That is a §11.4 seam problem: the gate asserts "no fails" when the invariant it shoul "no suite fails UNEXPECTEDLY". WH SURFACED NOW: this session authore across parallel streams (BOB-204, BOB-207, BOB-212) – the first time discipline was applied at this vol Previously REDs were flipped GREEN same round, so the window never sp

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					gate run. The defect is not new; t is. THE FORBIDDEN RESPONSES (§11 NOT delete the RED to make the gat NOT weaken invariant 30 to ignore do NOT mark the RED skipped withou reason. Each converts a real signa silence. FIX DIRECTION – this is quarantine mechanism, which the co already specifies and this project wired: a RED declares its expected status and its tracked item (a hea a naming convention, or a manifest invariant 30 reads that declaratio declared-RED failure is reported a (not a fail) while an UNDECLARED f still blocks. Crucially the declar EXPIRE or be tracked – §11.4.248 p quarantine with a stabilisation de precisely so "expected to fail" ca permanent cover. A RED whose item flip GREEN or the gate should FAIL stale declaration. ACCEPTANCE: (1 declared RED does not block; (2) a UNDECLARED failing suite still blo §11.4.201(1) guard – a fix that ig failures is strictly worse than th (3) a declared RED whose tracked i CLOSED blocks, so declarations can (4) a paired §1.1 mutation removin declaration-check makes the gate a undeclared failure -> gate FAILs. CHANNEL (§11.4.238): found by the readiness preflight, before the en rather than during it. Not by the QA regime – the regime IS the thin would have blocked. === CORRECTED – MY FIX DIRECTION IN THIS ITEM WA AND THE BLOCKER IS WIDER (§11.4.6) CORRECTION 1 – §11.4.248 IS NOT TH MECHANISM. I wrote "this is §11.4. quarantine mechanism, which the co

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					already specifies and this project wired." That is half right and the matters. §11.4.248(A) QUARANTINE t FLAKY tests – its trigger is liter consecutive-run-different-verdict after-red", and its remedy is to M suite to tests/quarantine/ and run blocking suite WITHOUT it "so gree green". §11.4.248(B) PROTECTED-SPE plus a required-reviewer gate on M regression test; it never says a t fail. A RED is DETERMINISTIC and M BE RUN – §11.4.115(F) and §11.4.22 the RED verdict to be PRODUCED as evidence. Excluding it destroys th artifact the discipline mandates. I two would also let a genuinely fla hide behind a RED declaration and What §11.4.248 legitimately suppli what should be INHERITED rather th invented (§11.4.227), is the SHAPE list + a tracked item + a deadline only-shrink ratchet. CORRECTION 2 A LANGUAGE-PARITY GAP, NOT A DESIG Conductor-verified: the project AL this mechanism on the PYTHON side. pytest.mark.xfail(strict=True) is deliberately for OPEN defects at t scaling/test_scaling_envelope.py:9 (BOB-167, documented in tests/scal README.md:64) and tests/stress/ test_plugin_parsers_stress_chaos.p whose own comments carry the ratch discipline verbatim ("it stays vis xfailed in every report", "then re xfail"). So "declared expected-fai strict so an unexpected pass fails ALREADY accepted policy in one lan BASH side has no equivalent. That gap. CORRECTION 3 – BOB-221 IS NO SUFFICIENT TO UNBLOCK T042. A full

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					replication of invariant 30 measur FAILED=4 SKIPPED=2: rc=124 300s test_compute_badges_carrier_match. HANG, not a RED. Blocks independen separately. rc=1 3s test_ownership_gid_agreement.sh BOB-207's RED (a SECOND in-glob RE item assumed one) rc=1 1s test_bob205_danger_roots_scope.sh BOB-205's RED rc=127 9s test_check_cm_lan_routes_authentic CONTAMINATED: a sibling stream was lan_route_auth_analyzer.py during the run (§11.4.119 – the surveying not own that resource and correctl to adjudicate). rc=127 is the §11. internal FAIL-bluff signature, not verdict either way. Returned to it stream. ALSO: BOB-204's and BOB-21 share tests/security/ test_gitignore_swallow_is_loud.sh, OUTSIDE invariant 30's glob and ex NOTHING (BOB-222) – they do not bl and widening the glob would immedi another blocker. THE DESIGN, RECO two-place declaration + SSoT expir semantics. THREE independent facts before a failure is excused – (1) is listed in scripts/lib/expected_ file the PRODUCING streams do not the suite file itself carries# EXP RED:with the SAME id; (3) <ID> is docs/workable_items.db, FAIL-CLOSE unreadable store or unknown id (§1 Plus STRICT-XFAIL PARITY: a declar that PASSES blocks, which mechanic the ratchet to shrink in the same the fix. EXIT-CODE CONVENTION REJ MEASURED EVIDENCE – and I had flag promising. The non-{0,1} exit spac ALREADY CLAIMED IN THIS REPO FOR T

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					MEANING: test_gitignore_swallow_is uses exit 2 = "INSTRUMENT BROKEN o LEAK – verdict void", and test_bob205_danger_roots_scope.sh = ABORT (instrument blind). Both w precisely so a blind harness can n read as a verdict. Overloading eit "expected red" would make a genuin INSTRUMENT INDISTINGUISHABLE FROM RED – the gate would swallow exact failure class those codes exist to It also fails acceptance (4) (an i carries no item id) and (3) (nothi check), and it puts the declaratio the PRODUCER, collapsing producer! (§11.4.240/§11.4.249). HONEST BOU THE DESIGN (§11.4.240): it achieve separation by LOCATION and MULTI-P AGREEMENT, not by true CAPABILITY, §11.4.240 prefers. There is no PR/ seam here to enforce capability – Hard Stop #1 removed all CI/PR gat CODEOWNERS half of §11.4.248(B) is STRUCTURALLY UNENFORCEABLE in this What the design buys is that silen failure requires a coherent three- visible in a diff, instead of one line. THE RED: tests/pre_build/ test_bob221_expected_red_declarati extracts invariant 30's loop and i predicate VERBATIM FROM THE LIVE G CONTENT MARKER (never line number) them against a hermetic scratch PR – so the logic under test is the g text, not a paraphrase (§11.4.226 Measured RED: 3 of 5 properties un 1. P3 is asserted on the blocking merely on "it blocked" – today eve blocks, so a bare did-it-block che pass FOR THE WRONG REASON and keep the anti-rot half were never built

					flip proven with the BYTE-IDENTICA against a sandbox carrying the pat all five properties met. Four pair mutations each kill exactly ONE pr one-to-one, no cross-talk. THE PA lines, 4 hunks + one new file scri expected_red.sh,git apply -checkcle APPLIED. Operational note the land must not miss: the table names test_bob205_danger_roots_scope.sh test_ownership_gid_agreement.sh, b carries an# EXPECTED-RED:` marker (verified 0 in both) — without those t additions the gate blocks them with” but the file carries no matching mark is the fail-closed design working as in a bug. SEQUENCING RECOMMENDAT bounded variant of (i) — land the me declaring exactly BOB-205, BOB-207 a item’s own suite, add the two missing triage the rc=124 hang as its own item the rc=127 to its owner, THEN run T0 HONEST COST, STATED NOT HIDDEN modifies the blocking gate BEFORE th ever run clean, so the mechanism’s fi exercise IS the T042 run. The circular unavoidable and IS this item (§11.4.1 whose precondition is produced by t gates): a clean T042 run is impossible RED exists, so “validate the gate befo it” cannot be satisfied. Risk reduced a possible without running the gate (pr applicable patch, proven polarity flip biting mutations, P2 undeclared-failu block asserted and mutation-proven) eliminated. Against (ii) fix-the-four-d all four are Queued and genuinely de BOB-212’s fix direction is an explicitl unresolved §11.4.66 OPERATOR decis own test was deliberately written fix agnostic so as not to prejudge it — ch

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
172	major	Fixed (→ Fixed.md)	Bug	—	means making that decision on the o behalf, plus four implementations an reviews, and it STILL leaves the hang rc=127 blocking. RECURSION NOTE: t own RED is in-glob and failing, so it i blocker until the mechanism lands — point its already-present marker and clear it. The mechanism is its own fir BOB-222 — WHAT: scripts/ pre_build_verification.sh:1196 enum suites with a glob covering EXACTLY directories: “\${PROJECT_ROOT}”/tests/ test_*.sh · “\${PROJECT_ROOT}”/tests/p test_.sh · “\${PROJECT_ROOT}”/tests/h test_.sh tests/security/ is NOT among Conductor-verified verbatim. So tests test_gitignore_swallow_is_loud.sh — authored this session with a golden-F proving real secrets stay ignored — i by NOTHING. It is a guard that guard and its silence is indistinguishable fr THIS IS THE THIRD OCCURRENCE OF CLASS. The driver’s OWN comment a records the history: the same defect o “existed for tests/pre_build/test_*.sh” fixed by adding that directory to the recurred one directory over (tests/ho the same way. Now tests/security. Eac new glob entry; none addressed why directory is invisible by default. §11.4 APPLIES DIRECTLY: three symptoms, primitive. The primitive is a hand-ma enumeration that must be edited in l with the tree, whose failure mode is the identical shape as BOB-205’s DANGER_ROOTS and BOB-212’s .gitig allowlist — three separate hand-mai in this repo, all three measured to ha missed something. Adding tests/secur glob would be the fourth instance of

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
173	critical	Fixed (→ Fixed.md)	Bug	—	NOTE THE GATE ALREADY HAS THE INSTINCT at :1220: it fails when the g matches NOTHING (“the glob is blind guard catches a TOTALLY blind glob . PARTIALLY blind one — the more co more dangerous case, because a part glob still reports a healthy count. FIX DIRECTION (§11.4.251 role-as-data-pa the suite set from the tree — every te test_*.sh — minus a DECLARED §11.4 exclusion fence with a justification p Then a new test directory cannot be and a deliberate exclusion is visible a reasoned. If a hand list is kept, the on guard is the same computation, so th derivation must be built either way. ACCEPTANCE: (1) tests/security suites (2) a NEWLY CREATED tests//test_x.sh up with no hand edit — that is the in stops the recurrence, and without it t the fourth patch; (3) a RED creating s directory and asserting it runs; (4) th blind-glob guard is extended to catch blindness, not only total. DISCOVERY (§11.4.238): found by the T042 reading preflight. Not by the automated QA r and notably not by the two previous same class, neither of which asked w happened. BOB-224 — WHAT: a replication of in (same glob, same skip list, same BOBA_PREBUILD_NESTED=1, same ti measured RAN=38 FAILED=4 SKIPPE the four failures is tests/unit/ test_compute_badges_carrier_match. rc=124 after the FULL 300 seconds not fail, it HANGS. WHY IT IS FILED SEPARATELY AND URGENTLY: it bloc invariant 30, and therefore T042, INDEPENDENTLY of BOB-221. The as

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					BOB-221 that landing an expected-RED mechanism unblocks T042 is FALSE and two of the four failures are REDs, one hang, one is contaminated. Landing the mechanism alone leaves T042 blocked in suite. IT MUST NOT BE SILENCED BY A DECLARATION. A hang is a §11.4.232 failure, not a verdict: a wedged op and progressing op both look like “not finished” and marking it expected-to-fail would be a §11.4.201(6) false-null into permanent failure. That is exactly the abuse the expected-to-fail design property (2) exists to prevent, and should be triaged as its own defect. INVESTIGATION: DIRECTION (§11.4.102 first, no guesswork) is the timeout(1) signature. Determining the wedges — a consumer blocked on an expected producer write-end is the documented failure here (§11.4.201(12) records that a bad watchdog spawned inside a \$(...) component substitution inherits the pipe write-end and early disarm orphans its sleep grandchild. Substitution stalls for the FULL budget, and every verdict and exit code stays COB. That signature — full budget, correct budget, matches rc=124 exactly and should be the hypothesis tested, not the last. The countermeasure is documented: redaction of the watchdog subshell fds away from the pipe, or have the probe write to a file and assume that is the cause; it is the high-level hypothesis given the recorded precedents. ACCEPTANCE: (1) the wedge point is confirmed with captured evidence, not inferred; (2) the suite completes deterministically within the budget; (3) a RED reproducing the hang hypothesis regression cannot silently re-wedge (no false-based assertion, since the failure IS the hang duration); (4) NOT closed by a declaration; (5) raising the timeout — raising the budget. FILE DATE: the suite is dated 2026-08-01

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
174	major	Fixed (→ Fixed.md)	Bug	—	hang predates this session. DISCOVER CHANNEL (§11.4.238): found by the E design stream while surveying invar more widely than its brief required – preflight had verified only 3 of 38 su stated that boundary honestly, which prompted the wider survey. BOB-225 — WHAT, conductor-verified: .gitignore:266 ignores *.docx The §11.4.65 export pipeline GENERA twins — the workable-items export p Issues.docx / Fixed.docx / Issues_Sum Fixed_Summary.docx, and the doc ex produced docs/scripts/ check_cm_lan_routes_authenticated. round 9. Every one of them is untrac construction: they exist on disk, git w see them, and no gate can notice bec absence is silent. WHY THIS IS THE B CLASS, NOT A DUPLICATE OF IT: BOB deny-all glob plus a hand-maintained ALLOWLIST, where new files leak thr gaps in the list. This is a deny-all glob allowlist at all for a file type the proje MANDATES producing. The mechan the false-null is identical — git status so the exporter appears to succeed an artifact appears to exist. It is filed sep §11.4.214 (distinct-but-similar), with and BOB-219 as siblings. THE TENSIO RESOLVE HONESTLY: §11.4.153 man FOUR-format export (HTML + PDF + its document class, and §11.4.65 gove twins generally. So the constitution r producing an artifact the repository configured to refuse. One of the two and the resolution is an operator dec (§11.4.66): (a) the .docx mandate app and the glob must carve out generate twins; (b) .docx is deliberately untrac

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					heavy binary derivative regenerable §11.4.77 from its .md, in which case t EXPORTERS should stop producing it produce it into an explicitly untracked and the §11.4.153 four-format require should be recorded as consciously no rather than silently unmet. What is N acceptable is the present state: gener ignore it, and let both the mandate a appear satisfied. MEASURED SCOPE (CORRECTED — my first write of this 'tracked .docx files = 0', which is FALS recorded here per §11.4.6 rather than amended): 2 .docx files ARE tracked a exist repo-wide, so 1138 are untracke ignored. (A second correction, also re rather than amended: my first correc 344, which counted only the docs/ su numeric errors in a row on one item pattern is that each was measured w narrower instrument than the claim supported, which is the §11.4.201(7)(part-of-the-instrument failure applie own reporting.) AND THE TWO SURV THE INTERESTING PART: they are do Status.docx and docs/features/ Status_Summary.docx — precisely th §11.4.153 explicitly mandates as a FC export. So the only two DOCX artifac see are the two a specific anchor nam they survive not by rule but because already in the index. That makes this condition, not a total one, and the tw are the interesting part — they are in position as frontend/e2e/credentials. under BOB-212: alive only because th already in the index, since git honour over .gitignore for tracked paths. One and-re-add, one file move, and they v silently like any other. So the state is a clean 'we never track docx': it is an

					tracked. Surfaced by the BOB-102 round-trip remediation and independently verified 2026-08-27.
176	minor	Fixed (→ Fixed.md)	Task	—	BOB-228 — WHAT: §11.4.212 makes the README the canonical entry point for project documentation, with no §11.4.212 doc reachable by no link path. docs/scripts/check_cm_lan_routes_authenticated. README reachable from README.md. MEASURED 2026-08-27: grep -c for the guide name in README.md returns 0, control-needed. If a doc README does link (CONTINUATION returns 1), so the instrument is not broken. ACCEPTANCE: README links the guide or transitively, and the doc-link generator docs/scripts/ so the next such guide cannot be orphaned. Surfaced by the BOB-102 round-trip remediation and independently verified 2026-08-27.
177	Critical	Fixed (→ Fixed.md)	Bug	—	BOB-229 — Caught live by scripts/pre_build/check_gitignore_swallow.sh (BOB-212 invariant 56), the very first real-repository was wired in. scripts/pre_build/check_cm_qbittorrent_webui_credentials tests/pre_build/test_check_cm_qbittorrent_webui_credentials existed on disk (executable, dated 2026-08-27) and were in DAILY FUNCTIONAL USE. scripts/pre_build_verification.sh invariant 56 (QBITTORRENT-WEBUI-CREDENTIALS) failed every run this session) yet were NEVER deleted by git: git ls-files returned nothing, git ls-files --short returned nothing (the exact Boolean was false-null), git check-ignore --quiet confirmed .gitignore:31:credentials was a blocking rule. Both files existed ONLY in the local checkout — a fresh clone, any other environment, or any disk loss would have silently lost an entire gate implementation. Surfaced by the BOB-102 round-trip remediation and its self-validated paired-mutation mechanism.
