BOB-160 closure evidence — 2026-09-23

Both acceptance criteria now genuinely met

(1) **ci.sh gains a runtime-gated pytest tests/ownership/ stage** — already present (line ~324): "\$PYTHON" -m pytest "\$SCRIPT_DIR/tests/ownership/" -v --import-mode=importlib --tb=short --timeout=180, landed by an unrelated prior commit before this session.

(2) **scripts/pre_build_verification.sh invariant 30's glob covers both tests/unit/test_*.sh and tests/pre_build/test_*.sh** — resolved THIS SESSION by BOB-222's fix (tree-wide find "\${PROJECT_ROOT}/tests" -type f -name 'test_*.sh' discovery, replacing the old three-directory hand-maintained glob).

Independently re-verified this session

```
$ ls tests/ownership/  
__init__.py __pycache__ test_container_writes_owned_files.py
```

```
$ grep -n "tests/ownership" ci.sh  
324: if "$PYTHON" -m pytest "$SCRIPT_DIR/tests/ownership/" -v ...
```

```
$ (extracted standalone run of invariant 30's exact discovery  
block)  
unit=32 pre_build=22 total=59
```

The invariant's own discovery genuinely returns a non-zero RAN count including files from BOTH tests/unit/ (32) AND tests/pre_build/ (22) — exactly the item's own stated acceptance criterion for part (2), verified directly.

Honest boundary

Part (1) was already resolved before this session by an unrelated commit (the tracker was never synced). Part (2) is a direct, intended consequence of this session's own BOB-222 fix, not independently re-implemented here.

git diff --stat

(none – read-only verification; both fixes already landed via other work)
