#	Level	Status	Type	Fixed-In Tag(s)	One-line description
114	Low	Fixed (→ Fixed.md)	Bug	—	BOB-144 — /theme/stream calls the d probe unguarded — fail-closed but v uncaught traceback, inconsistent with SSE generators
115	High	Fixed (→ Fixed.md)	Bug	—	BOB-145 — Fix the 7187 wedge: offlo memoise Deduplicator.merge_results regex work stops blocking the async loop
116	High	Fixed (→ Fixed.md)	Bug	—	BOB-146 — Constitution §11.4.252 de undercounts by 29% (30 vs 42 AST gr — 4 distinct blind spots make its outp not a census
117	Medium	Completed (→ Fixed.md)	Task	—	BOB-147 — Triage all 36 §11.4.252 fai 9 real defects fixed, 14 correct idioms vendored
118	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-148 — Standing red unit test not tracked: test_no_credentials asserts h False, gets True — real defect or non-test, undecided
119	Low	Fixed (→ Fixed.md)	Bug	—	BOB-149 — Managed-plugin count di 43/42/48 across constitution, CLAUDE the README badge; the badge is han maintained and unguarded
120	Low	Fixed (→ Fixed.md)	Task	—	BOB-150 — pre_build_verification.sh labels read N/44 but only 35 invarian labelled
121	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-152 — Constitution sweep walks third-party code: 82% of one gate's 38 findings come from submodules/
122	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-153 — Go profile cannot build: g requires go 1.26.2 but the Dockerfile golang:1.23-alpine
123	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-154 — Host venv and production run different starlette versions (1.4.1
124	High	Fixed (→ Fixed.md)	Bug	—	BOB-155 — workable-items diff repo Markdown are in sync' having opene Markdown files when -issues/-fixed

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
125	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-156 — BOB-145 event-loop regression is load-sensitive and flaky: 8786ms under load vs a 900-1500ms ceiling calibration on a quiet host
126	High	Fixed (→ Fixed.md)	Bug	—	BOB-157 — Our own BOB-137 stall with segfault the merge service: faulthandling dump_traceback(all_threads=True) hangs on unpatched CPython 3.12 defect
127	High	Fixed (→ Fixed.md)	Bug	—	BOB-158 — tests/conftest.py cannot run on production interpreter: binds asyncio.events._get_event_loop_policy to a private API, while production is 3.12.0
128	Medium	Completed (→ Fixed.md)	Task	—	BOB-160 — Reported-Via: §11.4.202 (2026-08-21T19:02:40Z) Reported-By: AI What (the report, v1.0): Independent §11.4.209 review (IMPOSSIBLE) found two of the feature's strongest assertions checks were never executed by any regression tests/ownership/ test_container_writes_owned_files.py §11.4.115 RED-turned-regression-guarantee FR-011/FR-007, proven via a docker-compose.yml revert mutation — was not covered by tests/integration/ (commit 58d340a) an autouse fixture hang) but no runner (test.sh, run-all-tests.sh) was ever extended to cover tests/ownership/. (2) tests/pre_build/test.sh, the §1.1 paired-mutation method was not in the scripts/pre_build/check_cm.sh gap was executed by NOTHING — self-reported honestly in commit 04742d7's own manifest ('STILL OPEN (reported, not fixed): tests/pre_build/ is executed by NOTHING') was tracked as a workable item (a §11.4.115 requirements gap) and never wired into pre_build_verification.sh invariant 30 (globbed only tests/unit/test.sh. Affected file-scope manifest: ci.sh; scripts/pre_build_verification.sh invariant 30 (UNIT-TESTS-EXECUTED) Reproductive

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
129	High	Fixed (→ Fixed.md)	Task	—	context: <code>grep -rn test_container_writes_owned_files ci.s</code> <code>run-all-tests.sh scripts/</code> returned zero (only docs/specs mentioned the path); <code>scripts/pre_build_verification.sh</code> shows 30's for-loop globbing only <code>tests/unit/t</code> never <code>tests/pre_build/test_.sh</code>. Acceptance criteria: <code>ci.sh</code> gains a runtime-gated ownership/ stage (skips honestly, <code>rc=0</code> if <code>podman/docker</code> present); <code>scripts/pre_build_verification.sh</code> invariant 30 covers both <code>tests/unit/test_.sh</code> and <code>tests/pre_build/test_*.sh</code>, verified by an external standalone run of the invariant's example reporting a non-zero RAN count that includes files from both directories. BOB-161 — Reported-Via: §11.4.202 directive task on 2026-08-21T19:31:10. Reported-By: BOB-092 remediation, finding What (the report, verbatim) names CM-NO-FAIL-OPEN-SKIP as one mandatory pre-build gates: it audits probe helpers and FAILs if any code probe converts an empty or unreachable result to a PASS-counting SKIP for a feature class sink-side probe. This project does not. Why this matters now rather than in the abstract: the BOB-092 remediation just TWO fail-opens of exactly this class for <code>e2e/test_live_stack_evidence.py</code> — the SKIP-on-404 (already removed at 7ba) surviving sibling at <code>test_iporrents_is_authenticated_in_s</code> skipped on 'not authenticated and stage success' while asserting 'treating as timeout'. That assertion was false for missing credentials (<code>upstream_http_403</code>) and broken container (<code>plugin_env_missing</code>) which are definitive product failures. The product already classifies via <code>error_t</code>

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					fail-opens of one class, found one at a the §11.4.146 extend-to-all-cases sign §11.4.238 coverage-escape signal toge regime did not surface either, an age code did. The remediation's own gua structural and lethal under three dis mutations, but they LIVE IN THE FIL GUARD, so deleting that file evades th entirely. A pre-build gate is the durab because it audits the corpus rather th Honest boundary (§11.4.6): this item claim the two remediated fail-opens unguarded — they are guarded, with evidence (13 passed in 97.36s against stack). It claims the CLASS has no cor detector, so the next instance in a dif invisible again. Affected scope / file-manifest: scripts/pre_build/ (gate ab e2e/test_live_stack_evidence.py (gua currently live inside the file they gua Reproduction / context: grep -rl 'CM OPEN-SKIP' scripts/ tests/ returns exa hit, and it is tests/e2e/test_live_stack — the file the guards live in, not a ga needle: the same query for CM-OWN INVARIANTS (a gate that does exist) n files, so the instrument can see gate t the single hit is a real absence, not a (§11.4.201(7)(b)). Acceptance criteri pre_build/ gate named CM-NO-FAIL-C exists, is wired into scripts/ pre_build_verification.sh, and audits probe helpers for code paths convert empty/unreachable/error response in counting SKIP for a feature class that sink-side probe. It ships a golden-TRU real fail-open -> gate FIRES) and a go with-carrier (an honest topology/geo comment merely MENTIONING the p gate MUST NOT fire), per §11.4.107(1

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
130	Medium	Fixed (→ Fixed.md)	Bug	—	§11.4.201(1). Paired §1.1 mutation manage gate FAIL before the gate is trusted. BOB-163 — OPERATOR DECISION (2026-08-21T19:41:08Z) §11.4.66 interactive clarification): YES IS RESPONSIVE IF Retry-After IS WELL-FORMED A 429 carrying a VALID Retry-After header counts as the sibling endpoint being RESPONSIVE. Assertion (c) of the DDG accepts 2xx OR a well-formed 429 (positive integer seconds or valid HTTP-date — not merely present/non-empty). DEGREE remains: connection failure, timeout, and a 429 with absent or malformed header. RESIDUAL RISK, accepted knowingly stated in the script source per §11.4.66 genuinely wedged endpoint that happens answer 429-with-Retry-After would parse Retry-After parse narrows that window not close it. Options (b) limiter-aware (c) exempt healthz probe were both chosen. NOT chosen. STILL OPEN, not covered decision: the detector counts 429 only though the script header says ‘429 (or equivalent)’; counting 503 would collapse the crash detector’s 5xx tally. Decide BOB-111 lands limiters on :7185 and answer is recorded as consumer DATA §11.4.35 — it is the operator’s stated agent inference, and supersedes an agent-chosen default on this question not chosen are named above so a future does not re-litigate a settled call (§11.4. bounded-verdict discipline applied to — prior item text follows — Reported §11.4.202 reporting directive bug on 2026-08-21T19:41:08Z Reported-By: [redacted] remediation, pre-existing defect surfaced BOB-111 landing a real limiter What report, verbatim): PRE-EXISTING, NOT INTRODUCED – and proven so rather

132	High	Fixed (→ Fixed.md)	Bug	—	relaxing the assertion or excluding the (11.4.120: reconcile to the correct me never weaken the check). The existing suite is the guard and already fails to RED is captured – closure requires it GREEN against the live surface, which runtime-class evidence per 11.4.226. BOB-165 — Reported-Via: §11.4.202 directive bug on 2026-08-21T20:00:08. By: surfaced while capturing closure for BOB-092; diagnosed rather than v around What (the report, verbatim STALE-ABI-AFTER-INTERPRETER-UP defect, not a missing package. The pa installed; its compiled half is built for previous interpreter. That distinction because ‘pip install rpds-py’ style adv appear to succeed while leaving the 3 in place. WHY IT WAS NOT NOTICED stated as fact: the paths that DO work system python3. ci.sh selects an inter through _select_python; the long-run in this session ran .venv/bin/python - and passed. So the automated regime while the DOCUMENTED operator co broken – an 11.4.238-shaped gap, sin escape was found by an agent captur evidence rather than by the regime. WORKAROUND (measured, not theor PYTEST_DISABLE_PLUGIN_AUTOLOA the needed plugins passed explicitly pytest_timeout ...) avoids the schema autoload that drags in jsonschema -> referencing -> rpds. That is a workar the fix: it silences the import path rat repairing the install, and it will surpr person who runs the documented co verbatim. RELATED, and worth decid together rather than twice: BOB-154 rebuilt on 3.12 to match the containe

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					runs CPython 3.12.13 while both system and venv run 3.14.6). There are therefore two interpreters in play. Whoever rebuilds should confirm rpds resolves for the interpreter afterwards, or this same error reappears one directory over. HONEST BOUNDARY (11.4.6): this item does NOT pass any test is wrong or any product code. The product and the venv-run suites are unaffected. What is broken is the documentation entry point. Affected scope / file-scope: manifest: host user site-packages (~/.local/lib/python3/site-packages/rpds/); every CPython documented 'python3 -m pytest ...' in any tooling that uses system python3 instead of .venv/bin/python Reproduction: python3 -m pytest tests/e2e/test_live_stack_evidence.py -q --importmode=importlib -> ModuleNotFoundError: No module named 'rpds.rpds', raised during collection via the schemathesis plugin -> jsonschema -> referencing._core -> MEASURED root cause: system python3 but ~/.local/lib/python3/site-packages/rpds.cpython-313-x86_64-linux-gnu.so extension built for 3.13. rpds/init.py 'from .rpds import *', and a 313-tagged module importable by 3.14, so the submodule does not exist for this interpreter. The CORRECT and unaffected: .venv/lib64/site-packages/rpds/ ships rpds.cpython314-x86_64-linux-gnu.so and '.venv/bin/python3 -m pytest tests/unit/ -v --importmode=importlib' - the command CLAUDE documents - reaches collection without ModuleNotFoundError, OR CLAUDE.rpds corrected to document the supported versions explicitly. Either way the documented command and the working command agree (11.4.6) guide that misleads is the documentation.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					equivalent of a PASS-bluff). WORKAROUND: The test suite is not free, and the item previously imported by the test suite (PYTEST_DISABLE_PLUGIN_AUTOLOAD) disables ALL plugin autoloading, not just the broken one, so anything the suite silently imports on must be re-enabled by hand: - It breaks pre-existing env-dependent tests in test_plugin_rutacker.py — TestConfig::test_default_mirrors, test_env_mirrors_override, test_get_env_with_default, test_get_mirrors_from_env_empty, test_get_mirrors_from_env_whitespace need an autoloading plugin. PROBLEM: caused by any in-flight change: running a OWN copy of that file under identical conditions produces the same 5 failures. - It makes -timeout=60 (set in pyproject.toml) a UNKNOWN ARGUMENT unless -p py is passed explicitly, so pytest.mark.time silently inert under the naive recipe believed to be time-bounded is not. - autoloading ON and only schemathesis (no:schemathesis), that same file is 96 CONSEQUENCE FOR ANYONE USING WORKAROUND: -p no:schemathesis strictly better than blanket autoloading where it suffices, because it removes broken plugin. Where the blanket for -p pytest_timeout must be added or time inert, and the 5 env-dependent failures recognised as workaround artifacts not filed as defects. That last point is the the workaround manufactures failures exactly like product defects. This does change the root cause (the venv's rpython-313 ABI tag CPython 3.14 can import) or the fix (rebuild the venv — It documents that the interim recipe

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
133	High	Fixed (→ Fixed.md)	Bug	—	radius, so nobody reads a workaround as a regression. BOB-166 — WHAT. §11.4.19 requires migration to be ATOMIC: a resolving to Fixed.md, DISAPPEARS from Issue (open-only) and APPEARS in Fixed_S (closed-only). Ten rows violate all three properties right now — they carry a status yet current_location='Issues', so render in docs/Issues.md and are listed in Issues_Summary.md with a status that reads '(→ Fixed.md)', while appearing in Fixed_Summary.md. Any reader of the open tracker is told these are open work MANIFEST (measured 2026-08-21): BOB-129 (Completed), BOB-129, BOB-131, BOB-145, BOB-146, BOB-148, BOB-153, BOB-157 (all 'Fixed (→ Fixed.md)'). Counting: BOB-155/087/157 each gre Issues.md, 0 in Fixed.md, present in Issues_Summary.md, 0 hits in Fixed_Summary.md. ROOT CAUSE (rooted at runtime, not inferred). 'close' performs atomic migration and REQUIRES –event. 'update –status' sets any §11.4.15 close value with NO evidence and NO migration and it knows the location, because it has a COPY of the real DB: \$ workable-item –id BOB-065 –db repro.db –status 'Fixed (→ Fixed.md)' update: BOB-065 updated (status=Fixed (→ Fixed.md), type=Task) repro.db 'SELECT atm_id,status,current...' BOB-065 Fixed (→ Fixed.md) Issue seem that is supposed to be the ONLY path (close, evidence-gated per §11.4.19) has a parallel unguarded path that reads same status while skipping BOTH the requirement and the migration. WHY? CAUGHT IT (§11.4.238 coverage-escape) Three standing checks stay GREEN on

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					holding the forbidden row, verified on a poisoned copy from the repo root so no artifact is involved: (1) ‘validate’ → ‘Close’ items, all invariants satisfied’ (it has a status↔location coherence invariant — ‘in sync’ (DB and Markdown agree — WRONG state; agreement is not correct). CM-CLOSURE-SEAM-BINDS CHECK A flags NON-terminal rows whose id appears in work commit; these rows are terminal rows outside its predicate by construction. This was found by reading a status tally, not an automated regime — a §11.4.238 disclosure channel escape, which is itself a defect standing to the mis-located rows. ACC (a) ‘update’ REFUSES a terminal status names ‘close’ as the correct path, with §1.1 mutation proving the refusal (regard guard must make the mutation pass). ‘validate’ grows a status↔location coherence invariant that FAILS on the forbidden a golden-bad fixture and a negative case legitimately terminal row in Fixed mode fire — §11.4.201(1)). (c) The 10 existing drained to Fixed with class-matched per row, or, where a row’s evidence could be produced, honestly re-opened rather than migrated on a bare assertion. (d) Honor boundary: this closes the update-path the detection gap; it does not claim evidence historical status write was evidence- NOT CLAIMED. No fix is implemented filing. The 10 rows are untouched; drain them is acceptance (c) and each needs evidence, not a bulk UPDATE. BOB-167 — WHAT. download-proxy and Server-Sent-Events routes. They are too expensive class — long-lived connections hold a worker and a generator for the — but only one is rate-limit classed:
134	Medium	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					routes.py:801 @router.get('/search/stream/{search_id}') @_rl('sse_stream') <- class routes.py:150 @router.get('/theme/stream') def stream_theme(...) <- NO limiter decorator _rl(cls) resolves to limiter.limit(limit=120) so /search/stream is bound to the sse_stream class while /theme/stream falls through application default. Measured live on running stack: /api/v1/theme/stream ratelimit-limit 120. PROVENANCE + A CORRECTION WORTH KEEPING (§11.1) was surfaced by the BOB-109 scaling whose report framed it as: 'sse_stream_limit_decorator is defined but not imported/applied nowhere ... SSE falls to the 120/minute default: 24x less precise. That framing is WRONG and was NOT given. The agent searched for one symbol NAME; the wiring uses a different method (@_rl('sse_stream')), and it IS applied to search/stream. Verified by reading routes.py:795-806 and the _rl helper in routes.py:46-51, with a control needle confirming other *_limit_decorator symbols show real usage in api/init.py so the was not a blind search. The agent's MEASUREMENT (120 on /theme/stream) is correct and is what makes this a real MECHANISM was not. Both halves are so the next reader does not re-derive the wrong cause. WHY IT MATTERS. An SSE endpoint is the cheapest way to protect resources: each connection is held open. default class permits 120/min of then declared sse_stream class exists precisely because this route shape needs a tighter than ordinary GETs. ACCEPTANCE. (a) decision, recorded, on whether /theme/ belongs in the sse_stream class or gets warrants the default — this is a policy not automatically a bug to patch. (b)

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					in sse_stream, the decorator is applied to the route, so it drives BOTH SSE routes and asserts that the route is its INTENDED class limit from x-rate-limit. (c) A guard that enumerates SSE-shape and fails on any that carries no explicit limit class — the general form, so the route does not repeat this. (d) Honest this does not claim 120/min is exploited deployment; with network_mode honest reverse proxy every caller shares the bucket, which BOB-111 measured and separately. NOT CLAIMED. No change limit values were read from headers, driven to exhaustion — the limiter is shared with concurrent agents on the (\$11.4.119). BOB-168 — WHAT. scripts/run_all_challenges.sh:66 lists “scaling_horizontal_challenge.sh” in challenge set. challenges/scripts/scaling_horizontal_challenge.sh does sed -n ‘66p’ scripts/run_all_challenges.sh “scaling_horizontal_challenge.sh” \$1 challenges/scripts/scaling_horizontal_challenge.sh ls: ca ...: No such file or directory VERIFIED independently, not taken on report — by the BOB-109 scaling agent and re- here by direct invocation. WHY IT M. Whether this is cosmetic or a §11.4.2 honesty defect depends entirely on how runner treats a missing entry, and the first thing to determine: if it SKIPS sil challenge bank advertises coverage i have (a §11.4.266 claim-vs-reality row passing challenge behind it); if it FAIL runner is permanently red for a reason unrelated to the system under test, w readers to ignore it. Neither outcome
135	Low	Fixed (→ Fixed.md)	Task	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					acceptable; they need different fixes. ACCEPTANCE. (a) Determine and record runner's actual behaviour on the mis by invoking it, not by reading it. (b) E author the challenge, OR remove the with §11.4.124 discipline: check git h whether it once existed and was dele silently-dropped challenge is the mor interesting defect. (c) If the runner si missing entries, that is its own findin challenge must be loud (§11.4.3 SKIP reason at minimum), never absent-a SEVERITY. Low as a defect, but it sits challenge-coverage seam, so (c) may own item. CORRECTION 2026-08-22 (THIS ITEM'S PREMISE WAS FALSE, a was mine. Recorded openly rather th edited. scaling_horizontal_challenge. It is at submodules/challenges/challe scripts/scaling_horizontal_challenge. executable, 3107 bytes, dated Aug 7. 9 other entries and the meta-runner. It deleted: added to the roster at 1c959 challenge itself added in the submod 873c0b1, and a pickaxe search across repositories and all branches finds Z deletions. HOW I GOT IT WRONG. run_all_challenges.sh reads submodu challenges/challenges/scripts/. I chec challenges/scripts/ — a DIFFERENT d belonging to a DIFFERENT, glob-base Two similarly-named directories; I m the wrong one. That is a §11.4.201(9) identity error. Worse, I wrote that it v “verified by invocation”: I had listed and never run the aggregator, so the overstated the evidence class as well the answer wrong. THE LESSON, whi generalises past this item. In the SAM correctly caught a sibling agent maki exact class of error on BOB-167 — a z

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					produced by searching one symbol name and then applied a control needle there. Then the needle one paragraph later on measurement. The distinction that was caught it: A CONTROL NEEDLE PROVIDED INSTRUMENT CAN SEE; IT DOES NOT IS POINTED AT THE THING UNDER TEST §11.4.201(7)(b) as commonly applied blindness; it does not guard mis-aiming needle for THIS query would have been resolve the path the runner itself reads confirm that some directory listing was WHAT IS ACTUALLY WRONG, and it is more than what I filed. The missing-entry problem no challenges by definition, so it can be exercised safely. Run against a checker the submodule is absent — the ordinary a clone made without –recursive — the runner (byte-identity sha-asserted, not reports: PASS: 0 FAIL: 0 SKIP: 16 TOTAL OBSERVED EXIT CODE: 0 An ENTIRE BANK REPORTS SUCCESS. Not one data entry tolerated — the whole suite silent without executing anything. That is § false-null verbatim, and it is observed rather than constructed (§11.4.115(G) ACCEPTANCE. (a) ANSWERED, though I filed: the runner reports a loud, court and then never blocks, because the expression reads only the FAIL count dangling-entry half is VOID — nothing dangling. (c) The real work is the exit roster entry the runner cannot execute be indistinguishable from a healthy decision recorded in docs/qa/BOB-16 decision_missing_vs_skip.md. RELATED REPORTED NOT FIXED: scripts/pre_build_verification.sh:1792 carriage SKIP/MISSING conflation one level up other runner. Filed separately.

138	High	Fixed (→ Fixed.md)	Bug	—	configuration change silently disable limiter', not 'currently broken'. PROV Raised as MINOR-3 by the independence of the BOB-111 rate-limiter work and independently confirmed by the imp agent, which noted it at BOTH source tracked follow-up rather than fixing change. Filed here because neither a write access to the tracker. WHY IT C BOTH PORTS. :7186's limiter was built deliberate policy parity with :7187's, this parsing. Fixing one and not the o leave the two surfaces disagreeing on identity — worse than the shared def because it becomes surface-dependent untestable as a single invariant. ACCI (a) Replace leftmost-element parsing trust-aware resolution at BOTH sites: rightmost-minus-N-trusted-hops, or a proxy CIDR allowlist where only a pe the allowlist may assert XFF at all — is a deployment-topology decision an recorded, not assumed. (b) A test tha rotating leftmost element and asserts key does NOT rotate, per site. (c) Pair mutation: restore leftmost parsing an must FAIL. (d) Negative control (\$11. with TRUST_FORWARDED_FOR OFF, must be ignored entirely and keying back to the peer address — a guard t honouring XFF when the flag is off w worse defect than the one being fixe boundary: this closes header-forgery does not make per-IP limiting fair be where many real users legitimately s address. NOT CLAIMED. No change n sites still parse leftmost; the flag still BOB-173 — WHAT. download-proxy/s hooks.py:96-102: def _save_hooks(ho list[dict[str, Any]]) -> None: try:

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					os.makedirs(os.path.dirname(HOOKS_FILE), exist_ok=True) with open(HOOKS_FILE, 'w').json.dump(hooks, f, indent=2) except Exception as e: logger.error(f'Failed to save hooks: {e}') catches EVERY exception, logs, and returns None. The signature returns None, so the caller has no channel to learn the write failed. The call sites then report success unconditionally. :152 _save_hooks(hooks) :174 _save_hooks(hooks) :154 logger.info('Saved hooks: %s', hook: ...') :175 logger.info('Deleted hook: %s', hook_id=..., ...) return HookResponse(hook_id=..., ...) {'message': 'Hook deleted', ...} USER-VISIBILITY CONSEQUENCE, which is why this is not a code-hygiene nit. A user POSTs a hook and receives HTTP 200 and a hook_id, and the hook was never written — their automatic hook never fires, and the API told them it worked. Symmetrically, a user DELETES a hook and receives 'Hook deleted', the file still holds it, and the hook fires again after the next restart. In both directions, the product reports the opposite of what happened, and the only trace is a log entry if nobody is watching. THIS IS THE \$11.4.201(6) SHAPE. The path combines two dangerous capabilities from that anchor's taxonomy: COORDINATE MUTATION of a shared resource (a file) and write) and EXTERNAL SIDE EFFECT (outbound calls the system will or will not work) — so it is required to FAIL CLOSED: validate precondition, refuse when it cannot be done, and surface the refusal. Instead it fails with a bare 'except Exception:' that only looks like an exact anti-pattern §11.4.252 enumerated in the product layer it is also a §11.4.201(6) violation: successful write and a swallowed failure are indistinguishable to the caller. PROVIDED AS AN OBSERVATION. Surfaced as an out-of-scope observation by an independent reviewer of the BOB-1337 isolation work — this swallow is what turned that defect into an 'assert 0 == 1' mystery.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					because the EACCES on /config was lost and discarded while the endpoint kept returning 200. Verified here directly from source code filing (the function body and both callers above), not taken on report. Recorded in §11.4.238 discovery-channel escape: the agent reading code during an unrelated investigation, not by the automated CI — the coverage gap is a defect of equivalence to the defect itself. ACCEPTANCE. (a) <code>_save_hooks</code> propagates failure — rather than return a status the callers must construct. Both endpoints translate a persistence failure into an HTTP error (500-class), never returning a body; a create that did not persist must return a <code>hook_id</code>. (c) A test drives each with the hooks file unwritable (read-only) and a patched open raising <code>OSError</code> and returning a non-2xx status AND that a subsequent call not list the phantom hook — assert on the observable outcome, not on the log line. Paired §1.1 mutation: restore the swap test must FAIL. (e) Audit the same file for swallows — this is a pattern, and one rarely alone. (f) Honest boundary: the claim the write currently fails in production claims that WHEN it fails the user is the opposite, and the BOB-135 investigation does fail in at least one real environment. CLAIMED. No change made. No assessment of how often the write fails in the operational deployment. RECORDING A SHELL ERROR IN MY OWN (§11.4.6): the first version of the description was written with the anti-pattern snippet inside backticks in a double-quoted argument, so the shell ran it as command substitution and the text was replaced with nothing — the stored description read 'the exact anti-pattern'. This is the SEVERITY of this session that backticks-inside-double-quotes has corrupted content (the first many

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
139	High	Fixed (→ Fixed.md)	Bug	—	commit message). Fixed here by editing a Python client with no shell quoting. Noted because a silently-truncated description is exactly the kind of quiet corruption §11.4.201(7)(c) warns about: path is part of the instrument, and it without erroring. BOB-174 — WHAT. A corrupt hooks file is silently indistinguishable from “no hooks configured”, and the next create then every existing hook while returning three. Three defects on one path, filed together because fixing any one alone leaves the reachable. A1 — download-proxy/src/hooks.py:104-112. <code>_load_hooks</code> wraps <code>except Exception: logger.error(...)</code> through to return <code>[]</code>. A truncated or hooks.json is therefore reported to even as an empty, healthy hook list. Confirmed source. A2 — the consequence, and this is High. <code>create_hook</code> loads, appends. Given a corrupt file that load turns in save writes a one-element list over the. Every previously-configured hook is. Measured by the implementing agent the ALREADY-FIXED tree, so this survives BOB-173 write-failure fix: BEFORE on <code>['prod-hook-0', 'prod-hook-1', 'prod-hook-2']</code> reports : 200 {'hooks': [], 'count': 0} <- ZERO hooks configured DELETE reports {'detail': 'Hook not found'} <- for a hook in the file POST reports : 200 hook_id=3c8a5930-... AFTER on disk : ['3c8a5930-...'] Three prod hooks destroyed HTTP 200 throughout, nothing surfaced to user. A5 — <code>_save_hooks</code> writes with <code>open(path, "w")</code>. A crash, ENOSPC, or write truncates the file in place. That the corruption A1 then reads as “no hooks configured”. A2 overwrites. The same codebase also

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					the correct pattern: theme_state.py:1 tmp-file + os.replace. WHY THE THRE ITEM. A5 manufactures the corrupt f misreads it as empty, A2 destroys the Fixing only A1 leaves truncation read fixing only A5 leaves an existing corru data-loss trigger; fixing only A2 leave lying about what is configured. The c defect. DELIBERATELY NOT FIXED UN BOB-173, and the reasoning is sound. implementing agent identified all thr auditing sibling swallows as that item and declined to fix them in the same because: they change GET semantics endpoint the frontend consumes (200 they need a CORRUPT-file reproduci than the UNWRITABLE-file one BOB- and they need a design decision that genuinely not obvious — a MISSING legitimately means “no hooks config a CORRUPT one does not, and today’s cannot tell those apart. Expanding B scope to cover them would have mea that decision unexamined. ACCEPTA Distinguish MISSING from CORRUPT file remains an empty list; a corrupt error, never silently []. (b) Decide and what GET does on corruption — 5xx, an explicit degraded marker the fron render. This is the design decision, an be stated rather than inferred from v the patch happens to do. (c) create/de NOT overwrite a file they could not p refuse, do not clobber (§11.4.252: mu external side effect must fail closed). the write atomic via tmp + os.replace theme_state.py’s existing pattern ratl inventing it (§11.4.28). (e) Tests asser USER-OBSERVABLE outcome, not log a corrupt file, assert GET does not cla hooks, assert a create refuses rather

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
140	Medium	Fixed (→ Fixed.md)	Bug	—	destroying, and assert the file still holds original hooks afterwards. (f) Paired mutation per guard. (g) NEGATIVE C (§11.4.201(1)): a MISSING file must store an empty list and a working create; a VA must behave exactly as today. A fix that every load fail closed by failing always fix. A3, RECORDED SEPARATELY, NOT THIS CHAIN. VALID_EVENTS and HookEventType are two sources of true closed set. Verified identical today, un against drift: if they diverge a hook r successfully and then silently never f assertion pinning them would close i CLAIMED. No change made. The BOB failure fix is real and orthogonal — it FAILED write honest; it does nothing SUCCESSFUL write of wrong data der misread file. BOB-176 — WHAT. _get_enabled_trac download-proxy/src/merge_service/s gates rutracker on RUTRACKER_USE RUTRACKER_PASSWORD only. It neve RUTRACKER_COOKIES. So an operato configured with cookies alone — no v no password — never has rutracker c all, and the tracker is silently absent fan-out rather than failing visibly. W INCOHERENT WITH THE REST OF TH _search_rutracker treats COOKIES as PREFERRED auth path, not a fallback nnmclub sibling DOES check its own variable. So the same codebase holds positions at once: cookies preferred a search site, cookies ignored at the en gate, and cookies honoured for a sibl WHY IT MATTERS MORE THAN IT LO CLAUDE.md documents a standing o mandate (2026-08-15) that per-tracke cookies files at \${TRACKER_COOKIE_

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					cookies_<tracker>.txt are auto-loaded as <TRACKER>_COOKIES before ever up, restart, install Stage 6 and start.sh and rutracker is named in that set. So SANCTIONED, documented configuration for this tracker produces exactly the gate ignores. An operator who follows documented instructions gets a tracker never runs, with no error to explain MODE. Silent absence, not a visible failure same §11.4.201(6) false-null shape as one layer earlier. BOB-172 fixes a tracker RAN and was REFUSED being reported empty; this is a tracker that never ran the merged result simply has one fewer contributor with nothing to indicate PROVENANCE. Found by the BOB-172 implementing agent while tracing the enablement path to locate the status-defect. Recorded here rather than fix change: it is a separate defect on a separate seam with its own oracle, and folding have widened BOB-172 past its capture evidence. ACCEPTANCE. (a) The enablement honours RUTRACKER_COOKIES as an independently sufficient credential, not what _search_rutracker already prefers what the nnmclub sibling already does asserting that a cookies-only configuration ENABLES rutracker, driving the real _get_enabled_trackers rather than a mutation Paired §1.1 mutation restoring the usual password-only gate — the test must give NEGATIVE CONTROL (§11.4.201(1)): a configuration with NO credentials at all still leave rutracker DISABLED. A fix enables an unauthenticated tracker instead than the gap, because it produces failures searches instead of absent ones. (e) All other trackers' gates for the same asymmetry rather than fixing only the one that was

					— three positions in one codebase su nobody has checked them together (S HONEST BOUNDARY. Not verified ag cookies-only deployment; read from the BOB-172 agent and recorded on i The reading is specific and checkable whoever takes this should confirm by before relying on it. 141 High Fixed.md) Bug — BOB-177 — W BOB-172 wired an identical 4-line HT guard at five private-tracker fetch sit download-proxy/src/merge_service/s (rutracker cookie :1390, rutracker cre :1468, kinozal :1648, nnmclub :1761, :1934). Only the rutracker COOKIE pa exercised by tests. EVIDENCE (review authored mutation R1, per 11.4.194(6 the BOB-172 independent review): de ONLY the kinozal guard wiring (search.py:1655-1658) while leaving t classifier intact left the full merge_se at 883 passed, ZERO failures. The suit see four of the five sites. FAILING SCI refactor drops or subtly breaks the w kinozal, nnmclub, iptorrents, or rutra credential. A 403 at that site silently f to status=empty with error=None -- t BOB-172 signature -- and no test redd DIRECTION (reviewer preferred): col five duplicated wirings into one shar e.g. _check_search_response(tracker_ status, body) -> bool, so there is ONE and a sixth site cannot be added ung (11.4.251 byte-identical-fork extractio Alternative: parametrise the guard to all five sites with per-site stub sessio ACCEPTANCE: mutating the wiring at five sites reddens at least one test. Pr running the same R1 deletion at each turn. 142 Medium Fixed (→ Fi Bug — BOB-178 — WHAT: downlo

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					src/merge_service/search.py:1638-1640: a failed kinozal LOGIN response with login_resp.status not in (200, 301, 302) and logger.error(...); return [] -- and sets None as a diagnostic. FAILING SCENARIO: Cloudflare returns 403 on takelogin.php. The kinozal client reads status=empty, error=None. That's not a BOB-172 signature exactly: a refusal to log in the user as an empty result set. CONTINUING: establishing this is an oversight, not a deliberate choice: the rutracker and nnmclub logs show they DO set diagnostics (upstream_captcha_failure, auth_failure), and the iptorrents login fails through to the search fetch where BOB-172's new guard catches it. Kinozal has one leg with neither. FIX DIRECTION: _classify_upstream_http_status(login_response) before the early return, or an authentication diag for the status-in-(200,301,302)-by-default case. ACCEPTANCE: a stubbed 403 on the login endpoint produces a non-None error in the kinozal chip, with a RED captured in the pre-fix code first (11.4.115). 14.4.115 Medium Fixed (→ Fixed.md) Task BOB-179 — WHAT: the BOB-172 index review demonstrated two further paths to report a refusing or unreachable trace as an empty result. Both are PRE-EXISTING and neither is a regression from BOB-172. The evidence log presents the five-site comparison without stating the boundary (11.4.115). It requires un-analysed dimensions be compared (gaps, never silently assumed safe). Gaps are an exception before resp.status is read. The probe B, captured: a connection-refused error. rutracker yields status=empty, error=None, http_status=None, metadata.errors=[None], metadata.status=completed. Each _search method swallows exceptions (except for logger.error; return results) before _search error handling can see them, so a trace

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					DOWN is indistinguishable from one genuinely empty. GAP B -- soft refusal 200. Reviewer probe A, captured: <code>_classify_upstream_http_status(200, <body>)</code> returns None, which is CORRECT design (a 2xx is a usable response; bo triggering would risk the over-fire th controls exist to prevent). But all five GETs use aiohttp's default <code>allow_redirects</code> so a session-expiry 302 -> login-page- parses to zero rows and reports empty DIRECTION: Gap A needs the exception a diagnostic rather than being swallowed needs a DISTINCT detector (final-URL login-form marker) with its own RED NOT a widening of the status-code tr ACCEPTANCE: both gaps closed with REDs, or explicitly closed per 11.4.11. evidence. Immediate sub-task: apper gaps paragraph to docs/qa/BOB-172/ fix_evidence_20260822.log. 144 (→ Fixed.md) Bug — BOB-180 — download-proxy/src/api/routes.py:72 status=captcha_required with a hard message naming RuTracker: 'RuTracker CAPTCHA. Use /api/v1/auth/rutrackers FAILING SCENARIO: a whole search results and the captcha-flavoured dia came from NNMClub's Turnstile, not The user is told to visit a RuTracker endpoint for an NNMClub problem. S BOUNDED: the full errors[] and track travel in the same response payload, is present and a client that reads the misled -- only the headline is wrong. was revived by BOB-172's error prop (correctly: suppressing that propagat recreate the same false-null one layer 11.4.247) and is already covered at th layer by tests/unit/api_layer/ test_routes_coverage.py:782. FIX DIR

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					derive the message from the tracker(actually erred rather than hardcoding SCOPE NOTE: api/ was owned by a si stream during BOB-172; the author w not to touch it. ACCEPTANCE: an NNM captcha diagnostic on a zero-result s produces a headline naming NNMClu High Fixed (→ Fixed.md) Bug — — WHAT: scripts/ generate_markdown_exports.sh acce arguments. It unconditionally scans PROJECT_ROOT/*.md, docs/ recursive scripts/ recursively (scan loops at line 105/111/116 as of 2026-08-23; they we when this was filed — line numbers the BOB-169 fix, the substance is unc was independently verified by execu invoking the generator with an expli produced an out-of-scope export and requested one), and PROJECT_ROOT from BASH_SOURCE (line 17). A calle writes 'bash scripts/ generate_markdown_exports.sh docs file.md' gets a WHOLE-TREE run with argument silently discarded. WHY IT the caller reasonably believes the run scoped to one file. It was not. In a sha checkout with parallel work streams regenerates any export whose .md is its derived files anywhere in the tree artifacts in other streams' scopes and BOB-068 auto-commit hazard, into a stream's commit. CLASS: a false affor script's interface implies a capability have (11.4.201: an interface must me claims). FIX DIRECTION: either accep path arguments and honour them (so run to exactly those files), or REFUSE clear message when arguments are p Silently discarding them is the one o must not remain. ACCEPTANCE: pass

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
146	Medium	Fixed (→ Fixed.md)	Task	—	either scopes the run to it, or exits no naming the unsupported argument. A capturing today's silent-discard behavior (11.4.115). LIVE INSTANCE, MEASUREMENT 2026-08-23 (this is no longer hypothetical). During the BOB-169 fix the conductor the generator with an explicit path to ONE document. The argument was d and the whole tree was scanned. It g docs/qa/BOB-174/DESIGN_DECISION. {html,pdf,docx} at 11:50 -- a SIBLING document, while that stream's author editing the source (.md mtime 12:00) exports were therefore stale on arrival additionally carried the pre-fix BOB- defect. The sibling author independently reported them as stale in its own hand having no idea another stream had c them. SECOND-ORDER LESSON worth with this item: the conductor's attempt the blast radius ALSO failed, and failed 'git status --porcelain \\\ grep -E "\.(html returned only its own files and read but docs/qa/BOB-174/ is an UNTRACKED DIRECTORY, which porcelain collapses single line, so the grep was structurally incapable of seeing the files inside it (a): matched the wrong surface; the c read as absence). The instrument that it is 'find BOB-182 — OPERATOR DECISION (2 §11.4.66 interactive clarification): MONOTONE RATCHET §11.4.224(E) adoption answer, recorded as consumer the adoption model for CM-EXPORT- VALID is the MONOTONE-DECREASE The count may only go down, never u Immediate hard floor, changed-code- deadline, and per-corpus phase-in w offered and NOT chosen. This closes

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					BOB-182 — the half that was genuine operator's. THE REMAINING HALF IS DEFECT STILL OWED: BASELINE is a constant, so the ratchet does not act — on improvement the gate PASSES the value to lower it to, but nothing and the gate keeps permitting regres the original count after the corpus he must NOT collapse §11.4.249 role sep gate that writes its own threshold du build run becomes a PRODUCER as w GATE. Acceptable shapes include a p baseline the gate READS but never w lowering via a separate explicitly-inv command, or a gate that FAILS loudly live count is below baseline so drift b actionable refusal. This answer is rec consumer DATA per §11.4.35 — it is t operator's stated choice, not an agen and supersedes any prior agent-chos on this question. Options not chosen above so a future reader does not re-settled call (§11.4.112(5) bounded-ver discipline applied to decisions). — pr text follows — WHAT: CM-EXPORT-C VALID (pre-build invariant 50) adopt pre-existing violations via a monoton ratchet rather than a hard floor. Two owed. (1) THE ADOPTION DECISION OPERATOR'S, NOT THE SCRIPT'S. 11.4 requires the brownfield adoption qu SURFACED to the operator and the ar recorded as consumer DATA – never ratchet. What exists today is a head plus a BOBA_EXPORT_CHARSET_BAS override: that DOCUMENTS a decisio made, it does not RECORD an answer operator gave. The independent revi judged the choice defensible and wor reverse it (a hard floor on 301 violati the build unreachable, which 11.4.23

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
147	High	Fixed (→ Fixed.md)	Bug	—	11.4.101 favours the reversible option. It is correctly held that it is not yet complete. Options for the operator: immediate (BASELINE=0) / keep the monotone r corpus phase-in / changed-code-only scheduled full-corpus deadline. (2) THE RATCHET DOES NOT ACTUALLY RATE. BASELINE is a hardcoded constant. C improvement the gate PASSES and P value to lower it to, but nothing lower gate keeps permitting regression all t back to 301 after the corpus heals. The now says tightening is MANUAL rather claiming automatic behaviour that d exist (11.4.6), but the honest statement stopgap, not the fix. WHY IT WAS NO WITH THE FIX: a gate that writes its threshold during a pre-build run bec PRODUCER as well as a GATE (11.4.24 separation), and that is a design char operator should approve rather than a side effect. ACCEPTANCE: the opera adoption answer recorded as consum and either a persisted baseline the ga and never raises (with the role-separ question answered), or an explicit de manual tightening is acceptable. BOB-183 — The compiled Angular bu shipped at download-proxy/src/ui/dis browser still carries the BOB-164 col defect verbatim: scanned 2026-08-23 21 violation nodes on darcula/dark a darcula/light, while the same sources scratch path report 0 across all 16 pa mode combinations. The fix is theref at the SOURCE layer and absent at th layer, so §11.4.108 layer 2 is NOT clos users still see the low-contrast dashb compounding facts make this silent r obvious: dist/ is gitignored, so the div

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
148	—	Fixed (→ Fixed.md)	Bug	—	never shows in a diff; and scripts/ins asserts only that the directory EXISTS that it is newer than the sources it was from, so a stale bundle passes install unchallenged. Acceptance: install (or equivalent gate) FAILS on a bundle of sources, the bundle is rebuilt, and does BOB-164/axe_contrast_scan.py run against download-proxy/src/ui/dist/frontend, exits 0 with zero violation nodes and blocking incomplete nodes. BOB-186 — workable-items diff returns and the verdict “DB and Markdown are on a PARTIAL read: invoked with -iss without -fixed it compared 77 Markdown against 184 DB items and called that printing both mismatched counts in output while 107 DB items were never compared against anything. Measure 2026-08-25: (A) no markdown paths - REFUSES exit 1; (B) -db-only -> honest Markdown compared”; (C) -issues all 0, “in sync (compared 77 Markdown against 184 DB item(s))”. The 11.4.20 null: a partially blind instrument returns same quiet green a genuinely-synced returns. IMPACT — CORRECTED 2026 original filing OVERSTATED this. I was CHECK 2 of the 11.4.106(F) commit set exposed. It was NOT. scripts/hooks/does commit-seam.sh:277 passes BOTH -iss -fixed, and a repo-wide sweep found executable caller that breaks: the two callers (that seam and pre_build_verification.sh:549) both paths; the single-path hits are prose files plus a static-scan test fixture. So was real and latent, never live in this The corrected claim is: any FUTURE caller would have been silently mis-t

149	—	Fixed (→ Fixed.md)	Bug	—	this defect was blind to) detected as “DB, absent in Markdown” (200 vs 201). Each needle byte-verified applied before running. HONEST GAP (11.4.6): UNKNOWN whether the shipped binaries are byte-reproducible from HEAD source - they were rebuilt. Both were proven to carry the same and behave identically on the real code. This is the behavioural evidence this closed. No claim is made about classes different compare (revision headers, *_Summary). BOB-189 — WHAT: the fail-open scanner shape-(A2) heuristic cannot distinguish ‘False’ meaning PROCEED-AS-IF-FINE from ‘return False’ meaning REFUSE. It flags textbook fail-CLOSED guards as fail-closed defects: <code>_is_safe_fetch_url</code> (x3), <code>_qbit_add_succeeded</code> (x2), and the home boundary guard. INDEPENDENTLY VULNERABLE 2026-08-25 by the conductor rather than on the triage agent’s word: download <code>api/routes.py:1122</code> defines <code>_is_safe_fetch</code> returning bool, and its only call site at <code>if not _is_safe_fetch_url(url):</code> reads ‘if not <code>_is_safe_fetch_url(url)</code>: <code>logger.warning(Refusing SSRF-unsafe URL (non-public target); skipping); continue</code> False return REFUSES the URL. WHY IT MATTERS: per §11.4.201(1) a false-positive refusal is a FAIL-bluff of equal severity to a negative pass, and here the consequence is worse than noise - acting on the finding means making the SSRF guard stop rejecting False, i.e. deleting an SSRF protection gate. A gate that instructs you to remove a security control is actively dangerous, not merely imprecise. REPRO: run the fail scanner; observe six hits; read each call site. ACCEPTANCE: the scanner distinguishes shaped from proceed-shaped False responses, site-aware, or an audited waiver list.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
150	—	Fixed (→ Fixed.md)	Bug	—	entry justification), the six drop out, golden-FALSE fixture containing a re-closed guard is added so the discrim itself falsifiable per §1.1. BOB-190 — WHAT: ~/.local/lib/python packages contains binaries built for tcpython-313 ABI while the interpreter 3.14, so pydantic_core and rpds fail to and every test importing FastAPI dies time. CONFIRMED NOT OURS: an unit file fails identically, so this is environ pre-existing. WHY IT MATTERS: CLAU documents ‘python3 -m pytest tests/u –import-mode=importlib’ as the cano invocation and that documented com currently cannot run - docs and host the §11.4.99 misguidance class at the environment layer. scripts/run-tests.s sidesteps it by selecting .venv/bin/pyt working path exists and simply is no docs tell a reader to type. IMPACT: an following CLAUDE.md literally concl suite is broken; worse, an agent coul green by rewriting tests. ACCEPTANC repair the host site-packages so the d command works, or correct CLAUDE TESTING.md to name the venv interp canonical - decided explicitly, not left whoever hits it next. Discovered out- the fail-open triage agent, so per §11. also owes a coverage-escape note: no check asserts the documented test in actually runs. BOB-192 — WHAT: the BOB-161 gate 6 real fail-open skips RATCHETED rat fixed. Ratcheting is the constitution’s brownfield default (§11.4.135/§11.4.2 this repo’s own precedent, so the cho correct - but the remediation it defer work that must be owned somewhere

					operator ONCE and never written to file. Safety verified BEFORE writing (§11.4.10): .env matched .gitignore:27 was untracked (needle-proven — the matcher confirmed docker-compose. tracked, so the negative is real); a \$9. backup was taken and is itself ignored write re-check confirmed .env still ignored absent from git status. Pre-store audit only tracked BOBA_API_TOKEN= occurred are the docker-compose passthrough {BOBA_API_TOKEN:-} and prose in the challenge — no literal value has ever committed. STILL OWED, and the item open until it lands: the BOOT-TIME IN (§11.4.254) that refuses to start LAN-I when the token is unset or empty. When arming is a state fix, not a defect fix — §11.4.226(5) is explicit that a state-on cannot close a defect item. Options not operator sets it themselves with the i blocking until then; invariant warns blocks on a named date. Recorded as DATA per §11.4.35 — the operator's s choice, not an agent inference. Options chosen are named so a future reader re-litigate a settled call. --- prior item --- OPERATOR DECISION (2026-08-26) BOBA_API_TOKEN and keep 0.0.0.0, h BOOT-TIME invariant that refuses to bound with the token unset. This item invariant. MEASURED FACT, not inference download-proxy/src/api/routes.py:83 require_api_token() reads BOBA_API request time and returns immediately unset or empty. Its own docstring states plainly: "BOBA_API_TOKEN unset/em return (OPEN). This is the DEFAULT a preserves the current no-auth contra workflow". docker-compose.yml:237 BOBA_API_TOKEN=\${BOBA_API_TOK

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
155	—	Fixed (→ Fixed.md)	Bug	—	the container inherits empty unless t declares it. The operator .env does N it, needle-verified per 11.4.201(7)(b): matcher hit QBITTORRENT_DATA_DI same file, so the miss is a real absenc blind read. The qbittorrent-proxy cor RUNNING and LAN-bound at measur time. Consequence: the ten routes th guard resolves as auth-wired are ope practice on a default deploy. WHY A S GATE CANNOT COVER THIS. The BOB asserts static route WIRING - that a Depends(require_api_token) marker handler, decorator or router. It canno runtime ARMING, which depends on read per request. Claiming the static it would be exactly the bluff the gate prevent (11.4.262: machine evidence match the layer it claims). This is a b invariant class per 11.4.254. ACCEPTA boot-time check that, when the listen bound (not loopback), refuses to star non-zero exit and a named cause if BOBA_API_TOKEN is unset or empty, state becomes UNREACHABLE rather default. Paired 1.1 mutation: remove prove the service starts LAN-bound-a Golden-FALSE per 11.4.201(1): a loop listener with the token unset must N refused, or the check becomes a false refusal blocking legitimate dev work COVERAGE-ESCAPE NOTE: found by reading source during BOB-102 guar construction, NOT by the automated which is itself the defect class 11.4.23 The boot-time check IS the new autom check that would have caught it. BOB-198 — OPERATOR DECISION (2 §11.4.66): REFUSE TO START LAN-B Go profile gets a boot-time guard: bir

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					only, or refuse to start. It does NOT go through the middleware in this cycle. Rationale for the decision: the profile is opt-in via the profile, was not running when measured, and was not for development — so closing the experiment with a guard rather than a parity implementation. Options not chosen: write auth middleware with parity with the Python route set (realized that it would partially un-defer BOB-101); write dev-only with no guard (rejected — not a profile would enforce it, and the next –profile would be this network silently re-opens 22 routes). ACCEPTANCE: a boot-time check that the listener’s bind address and refused connections when it is not loopback, with a paired mutation proving the check FAILs on the bind, and a golden-FALSE proving a loopback bind is NOT refused (§11.4.201(1)). So the reminder recorded so it is not lost: the check is covered by BOB-101’s parity deferral. The check is about ports; folding it in would be a security verdict leak. Recorded as consumer I-11.4.35 — the operator’s stated choice is agent inference. Options not chosen: so a future reader does not re-litigate the call. — prior item text follows — MEA conductor-verified independently of reporting subagent. qBitTorrent-go/c/qbittorrent-proxy/main.go registers three middlewares, at lines 62, 63 and middleware.CORS, middleware.Logger, middleware.GinRateLimit. There is no authentication middleware and no parity auth dependency. main.go:119-121 bind addr=“:” which is ALL interfaces, so the profile is LAN-reachable when the profile runs 22 routes, of which the mutating one is most - POST /api/v1/download, POST /api/v1/magnet, DELETE /api/v1/hooks/:id, POST /api/v1/schedules. A LAN peer can queue downloads and delete webhooks.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
156	—	Fixed (→ Fixed.md)	Task	—	configuration with no credential. PAM stated as fact: PUT /api/v1/theme is at the Python service and open in Go. The asymmetry holds for the download, but schedules mutations. Two implementations one advertised surface disagree about it needs a credential. RELATIONSHIP BOB-101 (Go parity deferred past v1. operator decision 2026-08-26): that d covered PORT parity - the Go contains :7186 and :7188 as well as :7187. It did cover an authentication hole, and the was not asked about one, because the not been measured when the question posed. Treating this as covered by the would be a 11.4.112(5) verdict leak: c bounded decision outside the scope i supports. This item stands separately severity is NOT settled by BOB-101. M FACT, so severity is not overstated: th is opt-in via –profile go and was NOT measurement time (the container list qbittorrent-proxy, the Python service Go sibling). The exposure is latent, no ACCEPTANCE: either auth middleware the Go service with parity to the Python set, or an explicit operator decision r the Go profile as dev-only that must n start LAN-bound - with a guard enforce whichever is chosen. BOB-199 — OPERATOR DECISION (2 §11.4.66): FLAG NARROW SUPPRESSION WITH AN IRREVERSIBLE CAPABILITY scanner flags a narrow contextlib.sup ONLY when combined with an irreversible capability (delete / truncate / kill) — t that actually causes harm. Idiomatic tolerances stay quiet, so the gate keeps credibility and no false-positive storm readers to ignore it. Options not chosen

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					the asymmetry permanently with a h statement; flag all narrow suppress a existing sites via a justified exemption MEASUREMENT CORRECTED TWICE: second correction explains the first: t ‘37 narrow sites, all idiomatic’ was pr by this conductor without verificatio measured by the authoring agent as CONTAMINATION (§11.4.201(10)) — 2 third-party + 9 sibling-agent worktre the very tree being measured + 1 rea instrument was counting other agent duplicates of its own subject. Reprod figures, each with its scope stated: co repo 0 narrow with-suppress; boba DANGER_ROOTS 0 narrow with-supp narrow except-pass; boba repo minu 1 narrow with-suppress (a suppress(narrow except-pass RETRACTED-ANI 2026-08-26 per 11.4.201(9): the figure previously recorded here reproduces scope and is withdrawn. Measured replacements, each with its scope an independently reproduced: 34 narrow pass git-tracked first-party (canonical narrow except-pass on-disk minus so (the ‘minus vendored’ scope this sent states). Brackets that explain the bad ALL-except-pass git-tracked and 113 pass on-disk-minus-scratch straddle ! was a class-scope conflation (narrow a corpus-scope one. The 35 cited later record is the same measurement at g scope and agrees with 34 within one ‘every one idiomatic’ claim was also except-pass census contains SystemE unit/test_plugin_torrentscsv.py:305,3 is not a benign tolerance. CORRECTIO 2026-08-26: a ‘KeyboardInterrupt x1’ written in this sentence was itself un and is WITHDRAWN — it reproduces

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					NEITHER stated scope. Independent over git-tracked *.py: ZERO genuine ‘KeyboardInterrupt: pass’. The only g instance in the checkout is .worktree workflows/tests/unit/test_main.py:63 sibling-agent scratch worktree, i.e. the observer-contamination class (11.4.2 every record teaches to exclude — and main-tree textual match (tests/unit/test_graceful_shutdown.py:165) sits i triple-quoted string literal, a carrier (11.4.201(7)(a)). Recorded because th instructive: it was introduced BY the that removed the 97, so a correction exempt from the discipline it applies as consumer DATA per §11.4.35 — th stated choice, not an agent inference not chosen are named so a future rea not re-litigate a settled call. — prior i follows — RESIDUAL ASYMMETRY su the BOB-195 fix, reported rather than closed. After teaching the scanner W BROAD suppress (Exception / BaseEx detected with the same severity as tr pass. A NARROW suppress (suppress(FileNotFoundError)) is not semantically identical narrow try/ex FileNotFoundError: pass IS flagged. S SIM105 rewriting a narrow handler s that site out of the gate’s scope, a sma of the exact mechanism BOB-195 was close. WHY IT WAS NOT CLOSED IN T with the measurement that decided i authoring agent reported 37 narrow sites, all idiomatic. CORRECTION (202 independent review): that figure DOI REPRODUCE and this conductor prop into this item as fact without verifyin error is mine, not the reviewer’s. Me constitution repo has 0 narrow with sites; boba first-party has exactly 1 (a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					suppress(OSError)). The nearest corp 35 narrow except X: pass handlers i party - a DIFFERENT construct - and census (OSError x7, ImportError x7, BrokenPipeError x3, RuntimeError x ValueError x2, FileNotFoundError x2 IndexError x2, SystemExit x2) contra one idiomatic': a bare SystemExit: pa benign tolerance. The two population be conflated, and the distinction is th substance of this item. The false-posit argument therefore rests on the 35 n except-handlers, not on 37 suppress : strength should be re-judged on that which under 11.4.201(1) is a FAIL-bl severity to the gap it would close, and practice because it trains readers to i gate. The subagent recorded the asyn the gate header as a known gap rather shipping the storm. That was the right is why this is a separate tracked item an unfinished one. THE DECISION IS OPERATOR'S, mirroring BOB-195 itse accept the asymmetry permanently, r gate header stating it so no reader m count for a census; (b) flag narrow su ONLY when combined with an irreve capability (delete / truncate / kill), cat shape that actually matters and leavi idiomatic sites quiet; (c) flag all narrow and absorb the 37 via a justified exer like the LAN-route guard uses. RELAT worth carrying: the five newly-visibl production sites in download-proxy/ merge_service/search.py (1294, 1303, 1333) wrap proc.kill / os.killpg / proc. BOB-126 cleanup path. The conducto the 11.4.263 pgid guard IS present an both killpg sites - _pid and _pgid each isinstance(int) and > 1 before the sys the BOB-126 forensic reasoning inlin

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
157	Medium	Fixed (→ Fixed.md)	Bug	—	sites are true-by-the-scanner's-definition. SAFE in fact, and want a justified exemption entry rather than a code change. BOB-200 — WHAT: scripts/gates/cm_dangerous_combination_fail_close builds its scan file list with find(1). If DIES (permission error, resource exhausted, interrupted), the gate receives an EM and interprets that as 'no files in scope' topology SKIP -> exit 0. The failure IS stderr but SILENT in the exit code, so gating on exit status reads a dead ins a clean corpus. WHY IT MATTERS: the textbook 11.4.201(6) FALSE-NULL – a instrument and a clean artifact return identical quiet zero. It is also a 11.4.201 OPEN on exactly the 'cannot enumerate corpus' condition where the gate's own discipline is to fail CLOSED. A gate that see must refuse, not pass. AFFECTED constitution/scripts/gates/cm_dangerous_combination_fail_close find invocation and the empty-list branch EXISTING – NOT introduced by the BOB change; found by the independent review reviewer while reviewing that change explicitly scoped OUT of its remediation REPRODUCTION: make find(1) fail due gate run (unreadable scan root, or a returning non-zero with empty stdout observe the gate exit 0 with a topology message, indistinguishable from a general empty corpus. ACCEPTANCE: (1) the gate distinguishes 'find succeeded and found files' from 'find failed' – check find's not only its output; (2) a failed enumeration FINDING (non-zero exit) naming the precondition, never a SKIP; (3) a general empty scan root still SKIPS honestly at the 11.4.201(1) golden-FALSE guard, so

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
158	Medium	Fixed (→ Fixed.md)	Bug	—	does not become a false-positive refusal paired 1.1 mutation: restore the swal failure behaviour and the new fixtur BOB-201 — WHAT: scripts/ownership fences declared scope entries LEXICA normalisation + prefix/traversal refusal lexical fence cannot see a symlink sit INTERMEDIATE path component. A s (already-present, no race required) s the middle of an otherwise-legal decl steers the recursive walk at a tree th never declared. Measured by the T02 independent reviewer as surviving m M5. WHY IT IS FILED SEPARATELY: t honest-boundary note and Case 24 fi this reach is ‘tracked as BOB-159’. It i VERIFIED 2026-08-26 by direct query description is 4685 chars with ZERO of ‘symlink’ or ‘intermediate’ (contro the body is readable through the sam path), and no item in the tracker reco reach at all. A dangling tracker citati real defect is recorded NOWHERE - th lost-defect shape, where the pointer l coverage and is not. This item IS that in-source note must now cite THIS id SEVERITY BOUNDS, stated honestly (reach is BOUNDED, not arbitrary. It r attacker or accident to have already symlink inside a declared scope path reachable from the shipped config/ owned_paths.yaml as it stands (shipp control needle: 6 rows, RC=0). It is a r widening of what a recursive chown not a theoretical one - the reviewer n no race needed. 					operator). BLAST RADIUS: this is the feature's own correctness core — the spec 002-user-owned-downloads. A feature means the feature reports success with the operator still has to chown by hand, the ORIGINAL reported problem the spec solve. DISCOVERY CHANNEL (§11.4.2) by an agent mapping the T041 review NOT by the automated QA regime — the escape in its own right. The escape and no existing check exercises a uid-flat filesystem, so no automated surface could caught it. NOTE ON THIS RECORD: the of this description was corrupted by a backtick expansion (three terms silently emptied). This is the repaired text; the corruption is recorded here rather than overwritten, per §11.4.6. 164 critical Fixed (→ Fixed.md) Bug — BOB-206 WHAT: scripts/lib/ownership.sh:299-300 probe_location() reads stat -c '%u' and against ownership_operator_uid (id - 1000) NEVER reads '%g'. Meanwhile ownership_operator_gid is defined as ownership.sh:50 and consumed ONLY ownership_repair.sh:360 — so the REPAIR establishes uid AND gid, while the PRECONDITION that verifies the repair checks uid ONLY. The precondition could therefore report ok while exactly half the property the repair exists to establish MEASURED, LIVE ON THIS HOST, UNPRIVILEGED (a setgid directory is — no loopback, no mount, no sudo): uid=1000 gid=10 mode=2755 (chgrp v chmod g+s, both unprivileged) real file there: uid=1000 gid=10 probe_location ok rc=0 <-- operator gid is 1000, file g SEVERITY RATIONALE: this is the SAME that BOB-206 alleged (a probe report ownership is only partly held) but on

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					that is LIVE rather than hypothetical, unusual filesystem, and reproduces v unprivileged commands. BOB-206 was dismissed; this is the real defect that investigation surfaced underneath it. ACCEPTANCE: (1) probe_location really compares gid as well as uid, OR the a is deliberately justified in-source with reason (if only uid matters to the use goal, say so and explain why the repair at all); (2) a RED fixture builds the set directory above, observes ok pre-fix, refusal post-fix (§11.4.115); (3) a gold fixture proves a correct uid+gid location ok (§11.4.201(1)); (4) whichever way resolved, precondition and repair agree WHICH property they are talking about disagreement is the primitive defect. DISCOVERY CHANNEL (§11.4.238): for BOB-206 verification stream, not by the automated QA regime. No existing test a gid mismatch. === CONFIRMED 202 RED AUTHORED — AND THE FIX DIFFERS THE OPPOSITE OF WHAT THIS ITEM === CONFIRMATION (re-derived again dirty tree; line numbers happen to match probe_location() at scripts/lib/ownership.sh:299-320 reads stat '%u' file branch, :314 dir branch), compare want at :301, and NEVER reads '%g'. ownership_operator_gid is defined and has EXACTLY ONE consumer — ownership_repair.sh:360 — verified a tracked AND untracked files, needle- (needle ownership_operator_uid -> 1 negative control -> 0; untracked sweep 8 files, ownership_operator_gid -> 0); other hit is a docs/DB carrier or command REPAIR SETS GID AT TWO SITES, not chown -h "\${OP_UID}:\${OP_GID}" WHERE and :963 find_args selects on (! -uid C

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					FALSE ok REPRODUCED unprivileged group from id -G + chmod g+s): dir uid=1000 gid=10 mode=2755, a REAL file created with uid=1000 gid=10, probe_location=absent ok rc=0. Needle arm: an absent path 'absent' rc=1 — the probe CAN refuse if the path is real. DESIGN QUESTION ANSWERED: **NARROW THE REPAIR. gid is NOT 1000 bearing.** This item was filed assuming the PROBE was deficient. Measured, that the probe works backwards. - With correct uid and gid, read, rename, move, chmod, utime, and ALL PERMITTED — including recovery of a file chmod 000 with NO elevation. Owners of files are selected by uid match and chmod only, so the operator can always restore. Every FR-001 / FR-002 / FR-003 / FR-004 is phrased as "owned by the account". Measurement requirement mentions gid. - DECISIVE CONDUCTOR-verified in spec.md: the CONDUCTOR section blesses "Group-based workarounds" (shared groups, permissive modes, and control lists) are acceptable implementations of "routes", and Dependencies makes "shared groups plus inherited permissions" NECESSARY. A container platform cannot map the identity of an account to the operator's identity. => THE PROBE would make FR-010 REPAIR. START on a configuration the spec excludes. sanctions — a §11.4.201(1) false-positive. the exact failure class this project keeps in its own gates. => AND THE REPAIR. ALREADY DOING HARM: measured, that a new file inherits gid 1000 instead of the setgid bit still set and NO diagnosis. repair silently dismantles a spec-sanctioned shared-group setup. THE RED: tests/utest_ownership_gid_agreement.sh (NO lines, bash -n clean). It deliberately does assert "the probe must call stat %g" — implementation assertion that survives

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
167	major	Fixed (→ Fixed.md)	Bug	—	cosmetic fix AND hard-wires one fix asserts the user-observable invariant probe_location(L) == ok IFF ownership --dry-run selects ZERO items under L 4 passed / 1 failed / EXIT=1, the failure PRECONDITION certifies it (ok) while reports it broken (selects:2)". VALIDATE AGAINST BOTH CANDIDATE FIXES for COPIES (production untouched): base FAIL(1) · narrow-the-repair PASS(0) · probe PASS(0). Golden-FALSE passes so neither direction can go green by everything. That is what makes this direction-agnostic rather than a vote NOT APPLIED — scripts/ownership_repair.sh:963: - find_args "\${OP_UID}" -o ! -gid "\${OP_GID}" \ -j '%U\t%G\t%m\t%p\0') + find_args+=(! {OP_UID}" -printf'%U 165 BOB-210 — WHAT: scripts/ownership_precondition.sh:342-348 the docker branch of detect_rootless documented-not-measured (accurate verbatim). The header then claims the built so that ‘an unverified reading can manufacture a refusal’. IT CAN. Line CONFIDENT rootful verdict whenever info succeeds with non-empty output no name=rootless field. Only the FAIL fall through to unknown (:387-394). TO HARM: PUID=0 is declared in doc compose.yml:32 (and again for jacker deliberate per project policy). With a rootful verdict, that reaches the R3 re :517. So a genuinely ROOTLESS Docker whose docker info output SHAPE differs the documented one gets a FALSE RE produced by a branch the source itself was never measured — precisely the the header promises is impossible. T

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
168	critical	Fixed (→ Fixed.md)	Bug	—	PROBLEM (§11.4.245 independence): tests DO cover this path (tests/unit/test_ownership_rootless_detection.sh) the shim's output shape was authored SAME documentation as the code. Our code share the unvalidated premise, cannot discover that the premise is wrong confirms the code matches the doc; not confirmed the doc matches Docker. ACCEPTANCE: (1) either the header corrected to match :413's real behavior is changed to yield unknown when the is unverified — the two must agree (§ the docker branch's premise is validated REAL docker info output from a real daemon, or the branch is honestly measured at the point of USE, not header; (3) if validation is operator-g a rootless Docker host), record it as §11.4.21 rather than leaving the head promise standing. ALSO VERIFIED G recorded so it is not re-investigated: unknown branch is handled IDENTIC both consumers (R3 :519-531, R4 :832 both a named SKIP, both return 0, ne refuses), ROOTLESS_VERDICT is cach so both read ONE measurement, and trap golden-FALSE fixture EXISTS (test_ownership_rootless_detection.s drives name=rootless-lookalike inside path and must NOT read rootless; str guard at :396-411 uses exact field equ substring). DISCOVERY CHANNEL (§1 found by the BOB-206 verification str BOB-212 — WHAT: .gitignore:31 is a glob <i>credentials</i>, followed by a HAND MAINTAINED per-file allowlist of ! ex (lines 34-50). Any NEW source file wh contains 'credentials' (or 'creds') is si ignored: git add refuses it and git star

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					NOTHING. The author gets no signal file simply does not exist as far as the path is concerned. HOW IT SURFACED BOB-204 stream authored a RED test credentials_failclosed_test.go. It vanished only because it went lost the file it had just written. It renamed bob204_failclosed_test.go to escape both <i>credentials</i> and <i>creds</i>, and the file became visible. A silent deliverable loss, caused rather than by any gate. INDEPENDENTLY CONFIRMED BY THE CONDUCTOR, confirmed by needle proven: git check-ignore -v -n qBitTorrent-go/internal/jackettapi/credentials_failclosed_test.go <pre>-> .gitignore:31:credentials (IGNORED) git check-ignore -v --no-index qBitTorrent-go/internal/jackettapi/zzz_probe_test.go -> no match (ignored) <- the needle: instrument probe not seeing, so the hit above is real git check-ignore -v --no-index frontend/e2e/credentials.spec.ts</pre> <pre>-> .gitignore:31:credentials (IGNORED) git check-ignore -v --error-unmatch frontend/e2e/credentials.spec.ts -> tracked SECOND, LATENT INSTANCES</pre> frontend/e2e/credentials.spec.ts is matched by the same rule and survives ONLY because it is already tracked (git honours the index over .gitignore for tracked paths). Do not add it — an ordinary refactor, a branch operation, a file move — and it disappears silently. It is one routine operation and being lost. (For contrast, credential-dialog.component.spec.ts is genuinely covered by the DIRECTORY rule !frontend/app/jackett/credentials/ at line 43, not a file entry.) WHY THIS IS A §11.4.201(1) NULL, NOT MERELY AN INCONVENIENCE blind instrument and the clean tree remains identical quiet zero. git status showing means BOTH ‘no new files’ AND ‘a new file but is invisible’. There is no signal that

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					distinguishes them. The commit path thing every other gate's output event travel through — cannot see its own WHY IT IS NOT SIMPLY 'ADD ANOTHER' that is the mechanism that produced A hand-maintained allowlist against glob has the §11.4.251/§11.4.205 shape future legitimate credential-named source needs a hand edit nobody will remember make, and the failure mode of forgetting SILENT. The same shape as BOB-205's maintained DANGER_ROOTS: a list that edited in lockstep with the tree, with that notices when it was not. TENSION RESOLVE HONESTLY (§11.4.10 vs §11.4.205) the glob exists for a real reason — §11.4.205 forbids credential material reaching broad deny-all is the conservative-safety. Narrowing it carelessly would re-open a leak channel. So the fix is NOT 'delete Candidate directions, operator decisions (§11.4.66): (a) narrow the deny to what carries secrets — extensions and directories (.env, secrets/, credentials.json yaml etc) rather than every path containing (b) keep the deny-all but add a GATE that when an untracked file matches an ignore AND lives under a first-party source root has a source extension, so the swallow is loud instead of silent; (c) both. (b) alone is false-null even if the glob stays exactly the same and is the smaller change. ACCEPTANCE NEW credential-named source file under first-party source root either commits normally produces a LOUD refusal naming the reason it blocked it and the remedy — never silent RED that creates such a file and asserts current silence, flipping to the loud path (§11.4.115); (3) a golden-FALSE providing secret material (a .env, a key) is STILL the §11.4.201(1) guard, because a fix to

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					credentials to close a false-null is stricter than the defect; (4) frontend/e2e/credentials.spec.ts is made safe by rule 157, not by the accident of already being tracked. DISCOVERY CHANNEL (§11.4.238): for BOB-204 stream when its own delivery disappeared — NOT by the automated rule, and not by any gate. Nothing in the record that an authored file actually became tracked in git. Coverage-escape audit: no surface evidence of this class at all. === SCOPED AND MEASURED 2026-08-26 — RECOMMENDATION (b) IS DISPROVEN NOT MERELY DISFAVORED TASK 1a — TRACKED FILES SURVIVED BEING TRACKED: 3, not 157. A raw scan of 2795 tracked paths hit 157 ignore rules, of those are NEGATIONS (! lines), i.e. re-included and safe BY RULE. Report that the blast radius would have been a \$1000 false positive; the investigating stream is this itself. Two independent instruments ignore -v filtered on non-negated patterns, bare check-ignore which emits only tracked/excluded paths) produced IDENTICAL results. frontend/e2e/credentials.spec.ts — .gitignore:credentials* — HAZARD (the known line Playwright spec) 2. tests/security/test_jackett_autoconfig_secrets.py — .gitignore:51 secrets — HAZARD, NAMED IN THIS ITEM WHEN FILED Conductor-verified: matched by :51, not tracked. It is a 113-line SECURITY / PROBABLY asserting no credential value reaches the body, traceback, or log. Losing it silently remove the test that guards §11.4.10 for all glob's own purpose. That is the shodan instance available: the rule protecting credentials is one refactor away from the test that proves credentials are present in submodules/jackett — .gitignore:260 hazard: mode 160000 gitlink, and that

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					documented as deliberately inert for CodeGraph per §11.4.79). THE MECH DECIDES THE FIX: the directory nega re-includes the DIRECTORY ONLY. A frontend/src/app/jackett/credentials/credentials.guard.ts is STILL swallow because <i>credentials</i> contains no slash therefore BASENAME-scoped — the a directory buys nothing for new files. safe files, 124 are held by ONE robust negation (!docs/qa//.log) and 13 by fi hand-maintained per-file entries (currently live, none stale — but ea future silent loss). TASK 1b — ALR SWALLOWED UNTRACKED FILES: : ignored+untracked paths. Two are losses (the tracker-credentials exp and the BOB-124 .txt evidence — fil own item); set_password.py is reco UNKNOWN: provenance and delib NOT called lost work; download-p qbittorrent_creds.json is the POSIT CONTROL — shape-inspected keys- (never values) as [password, usern genuinely credential-bearing, COR ignored. TASK 2 — MEASURED IN A TREE, 10 source paths x 15 secret p baseline (full 316-line file) swallow 0 (a) EXACTLY AS THIS ITEM WOR swallows 0 leaks 3 (a) repaired t those 3 swallows 1 leaks 1 (b) der unchanged + loud gate swallows 0 (a) LEAKS download-proxy/ qbittorrent_creds.json — A REAL CREDENTIAL FILE SITTING IN THE TODAY — because credentials.json match “creds”. It also leaks my_pa and service_credentials. Repairing leaves service_credentials: an exte scoped deny cannot cover EXTENS secret files without collapsing bac

					becomes EXECUTED CODE. THE SHARPE ABOUT THIS FINDING: the fail-close produced THREE FALSE POSITIVES in file (:189, :198, :215 – all triag POSITIVE, see BOB-214's correction MISSING this, the one genuine dang combination in it. That is the §11 both-directions failure – false-po false-negative – demonstrated insi file. It is the strongest availabl that the detector classifies by lo syntactic shape and never consults role (the §11.4.250 primitive name BOB-191/BOB-216). REACHABILITY, S HONESTLY (§11.4.6): the script is NOTHING – control-needle-proven (9 hits, 0 negative control) it is re only by its own README, its own do and a tracker note; zero hits acro *.yml / *.py / Makefile outside to own README self-declares "not invo normal start/stop flow". Last func commit 2026-04-12. So this is NOT automated path. It IS reachable by --update, which is exactly what th exists for. Severity is Critical o capability combination, bounded by reachability – not on an active ex path. ACCEPTANCE: (1) plugin sour pinned (commit SHA or content hash verified before write; (2) an unve source REFUSES and names which che (§11.4.252) rather than proceeding syntax pass; (3) the compile() cal documented in-source as a syntax c is NOT a safety gate, so nobody re one; (4) a RED serving a syntactic hostile payload and asserting it i pre-fix-absent / post-fix-present; golden-FALSE proving a legitimate update still succeeds (§11.4.201(1

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					DISCOVERY CHANNEL (§11.4.238): four concealed-hits triage stream while establishing that the gate's four this area were false positives. No automated QA regime – and the regi pointed here reported the wrong th 174 major Fixed (→ Fixed.m – BOB-218 – WHAT: tools/README.m "the backup is restored" on valida failure. Conductor-verified: shuti appears EXACTLY ONCE in tools/ plugin_update_automation.py and co FORWARD only – a reverse-direction has ZERO occurrences (grep control proven seeing: needle 2 hits, nega control 0). The plugin write opens "w", which TRUNCATES IMMEDIATELY. OBSERVABLE HARM (the reason this i merely a doc defect): a failure pa through the write leaves a TRUNCAT IMPORTABLE plugin on disk. The ope told the update FAILED and reasona concludes the previous file surviv because the README says it was res was not. The next ./install-plugin the corrupt file into config/qBitt nova3/engines/ and that search eng SILENTLY STOPS WORKING. The .bak n recover DOES exist on disk; the to mentions it and never uses it. Th §11.4 documentation-layer bluff wi downstream consequence: the doc as safety property the code does not and the operator's recovery decisi on that false assertion. SECOND, DIVERGENCE: the README claims JSON stdout; :274 writes it to a FILE (open(args.output, "w")). THIRD, MINOR DEFECT in the same file (rec rather than as its own item becaus the file and the fix window):

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					_extract_version at ~:198 uses a BAREexcept:, so a Ctrl-C during the sweep is SWALLOWED. That is a sign defect, not a fail-open – the gate this line, but for the wrong reason the silent default return; the reason the bare except catching KeyboardInterrupt ACCEPTANCE: (1) either the rollback IMPLEMENTED (restore the .bak on failure the README claim is DELETED – the code must agree (§11.4.6); if implemented write to a temp file and rename at rather than truncating in place; (2) stdout-vs-file claim corrected; (3) except narrowed so KeyboardInterrupt propagates; (4) a RED that fails to mid-way and asserts the previous path intact (post-fix) / truncated (pre-fix) REACHABILITY: same as the sibling hand-run only, not in any automated last functional commit 2026-04-12. Major on the harm shape, bounded by reachability. DISCOVERY CHANNEL (found by the concealed-hits triage Not by the automated QA regime. minor Fixed (→ Fixed.md) Bug BOB-220 – WHAT: scripts/ownership_repair.sh:891-895 runs c intending to strip setuid/setgid but live: the chmod RUNS and SUCCEEDS, mode stays 2755. Root cause measured chmod with a 3-DIGIT symbolic-equivalent octal PRESERVES the setgid bit on DIRECTORIES; only a 4-digit form (or an explicit g-s clears it. The comment :868-884 describes a strip that does occur for directories. EFFECT: be – the surviving setgid bit is not harmful, and no defect is known to from it. This is filed as a §11.4. defect: an in-source comment asserting

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					behaviour the code does not perform matters because the next reader will it, and because a future security-strip written against the same pattern silently fail the same way. RELAT BOB-207: the same stream measured repair a new file inherits gid 100 SETGID BIT STILL SET – the two factors compound. If BOB-207 is resolved by the repair (the recommended direct setgid survival becomes moot for that but the misleading comment remains ACCEPTANCE: (1) either the strip is (00755 or g-s) or the comment is correct state that directories retain setgid and comment must agree; (2) if made RED asserting mode 2755 -> 0755 on directory, since the current form no-ops; (3) golden-FALSE proving a that SHOULD keep its mode is not changed. DISCOVERY CHANNEL (§11.4 found by the BOB-207 stream while unrelated behaviour. Not by the au regime. 176 critical Fixed Fixed.md) Bug – BOB-221 – WH scripts/pre_build_verification.sh 30 (CM-BASH-UNIT-TESTS-EXECUTED) e suites by FILESYSTEM GLOB (:1196) fail() on any non-zero exit. It th RUNS untracked suites, and it has of a test that is SUPPOSED to fail MEASURED: tests/pre_build/test_bob205_danger_roots_scope.sh correctly, because it is a RED tes BOB-205, an unfixed defect. Invari counts that as a gate failure. The T042 verdict is FAIL, and this is three blocking causes. THE STRUCT PROBLEM: §11.4.115 and §11.4.224 R RED authored FIRST and OBSERVED TO before the fix exists. §11.4.135 r

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					RED to persist as the permanent re guard. So the discipline mandates failing tests exist in the tree be authoring and fixing – and the blo treats their existence as a defect the constitution correctly makes t refuse the commit. That is a §11.4 seam problem: the gate asserts "no fails" when the invariant it shoul "no suite fails UNEXPECTEDLY". WH SURFACED NOW: this session authore across parallel streams (BOB-204, BOB-207, BOB-212) – the first time discipline was applied at this vol Previously REDs were flipped GREEN same round, so the window never sp gate run. The defect is not new; t is. THE FORBIDDEN RESPONSES (§11. NOT delete the RED to make the gat NOT weaken invariant 30 to ignore do NOT mark the RED skipped withou reason. Each converts a real signa silence. FIX DIRECTION – this is quarantine mechanism, which the co already specifies and this project wired: a RED declares its expected status and its tracked item (a hea a naming convention, or a manifest invariant 30 reads that declaratio declared-RED failure is reported a (not a fail) while an UNDECLARED f still blocks. Crucially the declar EXPIRE or be tracked – §11.4.248 p quarantine with a stabilisation de precisely so "expected to fail" ca permanent cover. A RED whose item flip GREEN or the gate should FAIL stale declaration. ACCEPTANCE: (1 declared RED does not block; (2) a UNDECLARED failing suite still blo §11.4.201(1) guard – a fix that ig

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					failures is strictly worse than the (3) a declared RED whose tracked item is CLOSED blocks, so declarations can't be (4) a paired §1.1 mutation removing the declaration-check makes the gate a undeclared failure -> gate FAILs. CHANNEL (§11.4.238): found by the readiness preflight, before the end of the rather than during it. Not by the QA regime – the regime IS the thing that would have blocked. === CORRECTED – MY FIX DIRECTION IN THIS ITEM WAS AND THE BLOCKER IS WIDER (§11.4.6) CORRECTION 1 – §11.4.248 IS NOT THE MECHANISM. I wrote "this is §11.4. quarantine mechanism, which the code already specifies and this project is wired." That is half right and the other matters. §11.4.248(A) QUARANTINE TESTS FLAKY tests – its trigger is literally consecutive-run-different-verdict after-red", and its remedy is to MANDATE suite to tests/quarantine/ and run the blocking suite WITHOUT it "so green green". §11.4.248(B) PROTECTED-SPECIFICATION plus a required-reviewer gate on MANDATE regression test; it never says a test can fail. A RED is DETERMINISTIC and MANDATE BE RUN – §11.4.115(F) and §11.4.227 the RED verdict to be PRODUCED as evidence. Excluding it destroys the artifact the discipline mandates. I two would also let a genuinely flawed hide behind a RED declaration and What §11.4.248 legitimately supplies what should be INHERITED rather than invented (§11.4.227), is the SHAPE list + a tracked item + a deadline only-shrink ratchet. CORRECTION 2 A LANGUAGE-PARITY GAP, NOT A DESIGN Conductor-verified: the project AL

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					this mechanism on the PYTHON side. <code>pytest.mark.xfail(strict=True)</code> is deliberately for OPEN defects at <code>scaling/test_scaling_envelope.py:9</code> (BOB-167, documented in <code>tests/scal README.md:64</code>) and <code>tests/stress/test_plugin_parsers_stress_chaos.p</code> whose own comments carry the ratch discipline verbatim ("it stays vis xfailed in every report", "then re xfail"). So "declared expected-fai strict so an unexpected pass fails ALREADY accepted policy in one lan BASH side has no equivalent. That gap. CORRECTION 3 – BOB-221 IS NO SUFFICIENT TO UNBLOCK T042. A full replication of invariant 30 measur FAILED=4 SKIPPED=2: rc=124 300s <code>test_compute_badges_carrier_match.</code> HANG, not a RED. Blocks independen separately. rc=1 3s <code>test_ownership_gid_agreement.sh</code> BOB-207's RED (a SECOND in-glob RE item assumed one) rc=1 1s <code>test_bob205_danger_roots_scope.sh</code> BOB-205's RED rc=127 9s <code>test_check_cm_lan_routes_authentic</code> CONTAMINATED: a sibling stream was <code>lan_route_auth_analyzer.py</code> during the run (§11.4.119 – the surveying not own that resource and correctl to adjudicate). rc=127 is the §11. internal FAIL-bluff signature, not verdict either way. Returned to it stream. ALSO: BOB-204's and BOB-21 share <code>tests/security/</code> <code>test_gitignore_swallow_is_loud.sh</code>, OUTSIDE invariant 30's glob and ex NOTHING (BOB-222) – they do not bl and widening the glob would immedi another blocker. THE DESIGN, RECO

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					two-place declaration + SSoT expiration semantics. THREE independent facts before a failure is excused – (1) is listed in scripts/lib/expected_ file the PRODUCING streams do not the suite file itself carries# EXP RED:with the SAME id; (3) <ID> is docs/workable_items.db, FAIL-CLOSE unreadable store or unknown id(\$1 Plus STRICT-XFAIL PARITY: a declar that PASSES blocks, which mechanic the ratchet to shrink in the same the fix. EXIT-CODE CONVENTION REJ MEASURED EVIDENCE – and I had flag promising. The non-{0,1} exit space ALREADY CLAIMED IN THIS REPO FOR T MEANING: test_gitignore_swallow_is uses exit 2 = "INSTRUMENT BROKEN o LEAK – verdict void", and test_bob205_danger_roots_scope.sh = ABORT (instrument blind). Both w precisely so a blind harness can n read as a verdict. Overloading eit "expected red" would make a genuin INSTRUMENT INDISTINGUISHABLE FROM RED – the gate would swallow exact failure class those codes exist to It also fails acceptance (4) (an i carries no item id) and (3) (nothi check), and it puts the declaratio the PRODUCER, collapsing producer! (§11.4.240/§11.4.249). HONEST BOU THE DESIGN (§11.4.240): it achieve separation by LOCATION and MULTI-P AGREEMENT, not by true CAPABILITY, §11.4.240 prefers. There is no PR/ seam here to enforce capability – Hard Stop #1 removed all CI/PR gat CODEOWNERS half of §11.4.248(B) is STRUCTURALLY UNENFORCEABLE in this What the design buys is that silen

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					failure requires a coherent three-visible in a diff, instead of one line. THE RED: tests/pre_build/test_bob221_expected_red_declarati extracts invariant 30's loop and i predicate VERBATIM FROM THE LIVE G CONTENT MARKER (never line number) them against a hermetic scratch PR – so the logic under test is the g text, not a paraphrase (§11.4.226 Measured RED: 3 of 5 properties un 1. P3 is asserted on the blocking merely on "it blocked" – today eve blocks, so a bare did-it-block che pass FOR THE WRONG REASON and keep the anti-rot half were never built flip proven with the BYTE-IDENTICA against a sandbox carrying the pat all five properties met. Four pair mutations each kill exactly ONE pr one-to-one, no cross-talk. THE PA lines, 4 hunks + one new file scri expected_red.sh,git apply –checkcle APPLIED. Operational note the land must not miss: the table names test_bob205_danger_roots_scope.sh test_ownership_gid_agreement.sh, b carries an# EXPECTED-RED:` marker (verified 0 in both) — without those t additions the gate blocks them with” but the file carries no matching mark is the fail-closed design working as in a bug. SEQUENCING RECOMMENDAT bounded variant of (i) — land the me declaring exactly BOB-205, BOB-207 a item’s own suite, add the two missing triage the rc=124 hang as its own iter the rc=127 to its owner, THEN run TO HONEST COST, STATED NOT HIDDEN modifies the blocking gate BEFORE th ever run clean, so the mechanism’s fi

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
177	major	Fixed (→ Fixed.md)	Bug	—	exercise IS the T042 run. The circular unavoidable and IS this item (§11.4.1 whose precondition is produced by t gates): a clean T042 run is impossible RED exists, so “validate the gate before it” cannot be satisfied. Risk reduced a possible without running the gate (pr applicable patch, proven polarity flip biting mutations, P2 undeclared-failure block asserted and mutation-proven) eliminated. Against (ii) fix-the-four-d all four are Queued and genuinely de BOB-212’s fix direction is an explicitly unresolved §11.4.66 OPERATOR decision own test was deliberately written fix agnostic so as not to prejudge it — ch means making that decision on the o behalf, plus four implementations ar reviews, and it STILL leaves the hang rc=127 blocking. RECURSION NOTE: t own RED is in-glob and failing, so it i blocker until the mechanism lands — point its already-present marker and clear it. The mechanism is its own fir BOB-222 — WHAT: scripts/pre_build_verification.sh:1196 enum suites with a glob covering EXACTLY directories: “\${PROJECT_ROOT}”/tests/test_*.sh · “\${PROJECT_ROOT}”/tests/p test_.sh · “\${PROJECT_ROOT}”/tests/h test_.sh tests/security/ is NOT among Conductor-verified verbatim. So tests test_gitignore_swallow_is_loud.sh — authored this session with a golden-F proving real secrets stay ignored — i by NOTHING. It is a guard that guard and its silence is indistinguishable fr THIS IS THE THIRD OCCURRENCE OF CLASS. The driver’s OWN comment a records the history: the same defect c

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					“existed for tests/pre_build/test_*.sh” fixed by adding that directory to the recurred one directory over (tests/ho the same way. Now tests/security. Ea new glob entry; none addressed why directory is invisible by default. §11.4 APPLIES DIRECTLY: three symptoms, primitive. The primitive is a hand-ma enumeration that must be edited in l with the tree, whose failure mode is the identical shape as BOB-205’s DANGER_ROOTS and BOB-212’s .gitig allowlist — three separate hand-main in this repo, all three measured to ha missed something. Adding tests/secur glob would be the fourth instance of NOTE THE GATE ALREADY HAS THE INSTINCT at :1220: it fails when the g matches NOTHING (“the glob is blind guard catches a TOTALLY blind glob PARTIALLY blind one — the more co more dangerous case, because a part glob still reports a healthy count. FIX DIRECTION (§11.4.251 role-as-data-pa the suite set from the tree — every te test_*.sh — minus a DECLARED §11.4 exclusion fence with a justification p Then a new test directory cannot be and a deliberate exclusion is visible a reasoned. If a hand list is kept, the o guard is the same computation, so th derivation must be built either way. ACCEPTANCE: (1) tests/security suites (2) a NEWLY CREATED tests//test_x.sh up with no hand edit — that is the in stops the recurrence, and without it t the fourth patch; (3) a RED creating s directory and asserting it runs; (4) th blind-glob guard is extended to catch blindness, not only total. DISCOVERY (§11.4.238): found by the T042 readin

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					MANDATES producing. The mechanism for producing the false-null is identical — git status shows that the artifact appears to succeed and the artifact appears to exist. It is filed separately as §11.4.214 (distinct-but-similar), with BOB-219 as siblings. THE TENSION: RESOLVE HONESTLY: §11.4.153 mandates a FOUR-format export (HTML + PDF + ...). It has its document class, and §11.4.65 governs twins generally. So the constitution requires producing an artifact the repository is configured to refuse. One of the two mandates and the resolution is an operator decision (§11.4.66): (a) the .docx mandate appears and the glob must carve out generated twins; (b) .docx is deliberately untracked heavy binary derivative regenerable §11.4.77 from its .md, in which case the EXPORTERS should stop producing it and produce it into an explicitly untracked and the §11.4.153 four-format requirement should be recorded as consciously not met rather than silently unmet. What is not acceptable is the present state: generate and ignore it, and let both the mandate and appear satisfied. MEASURED SCOPE (CORRECTED — my first write of this was ‘tracked .docx files = 0’, which is FALSE, recorded here per §11.4.6 rather than amended): 2 .docx files ARE tracked and exist repo-wide, so 1138 are untracked and ignored. (A second correction, also recorded rather than amended: my first correction was 344, which counted only the docs/ subdirectory numeric errors in a row on one item.) The pattern is that each was measured with a narrower instrument than the claim was supported, which is the §11.4.201(7)(b) part-of-the-instrument failure applied to own reporting.) AND THE TWO SURVIVORS: THE INTERESTING PART: they are doing

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					Status.docx and docs/features/Status_Summary.docx — precisely the §11.4.153 explicitly mandates as a FC export. So the only two DOCX artifacts we see are the two a specific anchor name they survive not by rule but because they already in the index. That makes this condition, not a total one, and the two are the interesting part — they are in position as frontend/e2e/credentials. under BOB-212: alive only because they already in the index, since git honours over .gitignore for tracked paths. One and-re-add, one file move, and they v silently like any other. So the state is a clean ‘we never track docx’: it is an inconsistent one where two artifacts prove the format IS tracked while 34 not. ACCEPTANCE: (1) the operator does above is taken and recorded; (2) when the exporter and the ignore rule AGREE if .docx is not tracked, nothing should generate one into a tracked doc directory carved out, a check that a generated actually trackable, so this cannot record (4) §11.4.153 compliance is either measured recorded as an honest gap, never left failing. DISCOVERY CHANNEL (§11.4. by the BOB-102 round-9 remediation when it regenerated its own guide two noticed the .docx could not be added automated QA regime — and the regime see it, which is the point. BOB-227 — WHAT: three of the four the CM-LAN-ROUTES-AUTHENTICATING build gate are untracked in git. 184	—	Fixed (→ Fixed.md)	Task	—	analyzer’s exact resolution semantics; a .Use()-on-a-named-group Gin idiom not want to guess at a checked-in sec data file. This service is not currently this deployment (–profile go is opt-in already loopback-bound by a prior B operator decision, so this is NOT an a exposure – it is a policy-file accuracy ACCEPTANCE: (1) re-run scripts/pre_ check_cm_lan_routes_authenticated. the current tree; (2) if it reports a nev for the Go service that is a false posit analyzer not recognizing the .Use()-o group pattern) or a stale-looking kno entry for a route that is now actually update config/lan_route_auth_policy. qbittorrent-proxy-go.auth_markers / entries to match reality; (3) if the gat passes cleanly with no change neede item noting that verification, no edit BOB-232 — AGENTS.md:55 states the backend (qbittorrent-proxy-go) serve 7187, AND 7188, and ‘replaces Pythor the exact false claim CLAUDE.md’s A section already corrected (2026-08-20 the container runs exactly ONE binar app/qbittorrent-proxy”]), binding a s ServerPort resolved from MERGE_SERVICE_PORT (default 7187 declared via EXPOSE but nothing bin 7186 is never bound either. Surfaced independently verifying BOB-141’s cl (2026-09-23) — the coordinator confi CLAUDE.md is already fully correcte AGENTS.md was out of that dispatch authorized scope, so it was flagged ra silently left stale (§11.4.238 discovery completeness). Acceptance: AGENTS. map/service-description table for the backend is corrected to match CLAU

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
185	—	Fixed (→ Fixed.md)	Bug	—	already-accurate BOB-141 text (same qBitTorrent-go/Dockerfile:16, internal config.go:58), reusing that correction citation style rather than inventing a new one. BOB-233 — Measured 2026-09-23: ./start.sh --reload-jackett rebuilt image 38ef1177e1e1 printed [SUCCESS] boba-jackett recreated podman inspect boba-jackett still showed 2a3173ce1941 started 17:09 (Up 2 hours). podman-compose ‘up -d boba-jackett’ recreated an unchanged-config container. start.sh --recreate moved the container to a new image. Violates the §11.4.200 version write rule: the success message is not the intended target holds the intended address. After the recreate, read back the running container image id and compare with the freshly built image id, FAIL loudly or (or force-recreate the scoped service, same to --reload-proxy-go. Needs RELOAD against a stub compose that does not reproduce: build a change, run --recreate-jackett, compare ‘podman inspect boba-jackett’ with ‘podman image inspect boba-jackett’. BOB-234 — Found 2026-09-23 while running BOB-192: after the fail-open skips we live run of tests/integration/test_merge gave 10 x HTTP 401 (hooks x5, magnet download x2). The running merge service BOBA_API_TOKEN set (BOB-197 managed guard), so POST /api/v1/magnet etc. a ‘valid API token required’; the tests boba requests without the Authorization header failing assert precedes any line BOB-192 changed, so HEAD fails identically: the tests were previously masked or never run on the armed service. Fix: the integration file read BOBA_API_TOKEN (env or .env, printed, §11.4.10) and send it; when not available and the service demands one.
186	—	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
187	—	Fixed (→ Fixed.md)	Bug	—	loudly rather than skip. RED-first: local http.server fixture answering 401 with header. BOB-236 — Observed 2026-09-23 19:40 start.sh --reload-python: ‘StopSignal SIGHUP failed to stop container qbittorrent-py in 30 seconds, resorting to SIGKILL’. The container PID 1 does not exit on SIGTERM within the timeout period, so in-flight requests, SSE streams and any pending writes are cut off immediately. The container is drained, and every restart costs the full timeout. Root cause UNKNOWN: candidates are start-proxy.sh not being a shell wrapper (start-proxy.sh not forwarding SIGTERM to the uvicorn children, uvicorn not handling the signal, or SSE streams stay open, or a blocked event loop). Needs systematic-debugging: measure the time the process is PID 1 (podman top / inspect --format '{{.Pid}}' SIGTERM to a scratch instance and time until the child’s exit, then RED-first test (a container that must exit within a bound on SIGTERM). Related context: BOB-137 (event-loop not exiting), start-proxy.sh, docker-compose.yml stop_grace_period.
