

README

docs/ — Project Documentation Index

Revision: 1 Last modified: 2026-06-06T00:00:00Z

This directory is the written source of truth for the qBittorrent-Fixed project. Each file below is either end-user facing, operator-facing, or contributor-facing. When a topic appears both here and in the top-level `README.md`, this directory is authoritative.

Purpose

- Collect every cross-cutting design note, runbook, and subsystem manual.
- Keep the top-level `README.md` short (one-page overview + quickstart).
- Feed the MkDocs Material site planned under Phase 8 of the completion-initiative plan (`docs/superpowers/plans/`).

How to add a new doc

1. Drop a `*.md` file here (no subdirectories except the existing ones).
2. Add a one-line entry to the table below.
3. Reference the file from the appropriate top-level doc (`README.md`, `AGENTS.md`, or `CLAUDE.md`) so it is actually discoverable.
4. `tests/unit/test_docs_presence.py` guards that a fixed set of subsystem docs exists — extend the guard when a new canonical subsystem doc appears.

Files in this directory

File	Audience	Topic
USER_MANUAL.md	End users	Day-to-day usage, WebUI, download flow
MAGNET_LINKS.md	End users	How magnet links are generated and handled
PLUGINS.md	Operators	Canonical 12-plugin roster, how to install/remove
PLUGIN_TROUBLESHOOTING.md	Operators	Common plugin failure modes and fixes
DOWNLOAD_FIX.md	Operators	Known-good recovery procedure for broken downloads
RELEASE_TORRENT_UPLOAD_FIX.md	Operators	Fix for the upload-release edge case
TEST_RESULTS.md	Operators	Snapshot of last full test run
TESTING.md	Contributors	Authoritative test-type catalogue + how to add a new test
SECURITY.md	Contributors	Threat model, credential storage, scanner stack
CONCURRENCY.md	Contributors	Asyncio model, semaphores, retries, graceful shutdown
OBSERVABILITY.md	Contributors	Prometheus + Grafana stack, metric names
PERFORMANCE.md	Contributors	pytest-benchmark suite, Locust load profile, SLOs
DATA_MODEL.md	Contributors	

File	Audience	Topic
		Pydantic + dataclass schemas (no relational DB)
COVERAGE_BASELINE.md	Contributors	Module-by-module coverage zero point
QUALITY_STACK.md	Contributors	docker-compose.quality.yml architecture
SCANNING.md	Contributors	Seven-scanner stack and triage policy
architecture/*.mmd	Contributors	Mermaid diagrams for container, search, shutdown, plugin, bridge
issues/*.md	Contributors	Frozen post-mortems for specific incidents
superpowers/plans/*.md	Contributors	Long-horizon implementation plans
../courses/README.md	All audiences	Asciinema video-course tracks (operator, plugin author, contributor, security/ops)

Conventions

- Markdown only. Diagrams are Mermaid (.mmd), not PlantUML / drawio.
- Wrap at 80 columns where practical; long URLs and code blocks are exempt.
- Link siblings with relative paths (./SECURITY.md), never absolute.
- Code blocks must specify a language tag so the MkDocs build renders syntax highlighting.
- Filenames use UPPERCASE_SNAKE_CASE.md for canonical subsystem docs, lowercase-kebab-case.md for transient notes under issues/.

What does NOT live here

- API reference — FastAPI auto-generates OpenAPI at /docs on the live service (port 7187).
- Frontend docs — see frontend/README.md (Angular 19, Vitest).
- Constitution / GitSpec memory — see .specify/README.md.
- Test runner README — see tests/README.md.
- Commit style and PR rules — see CONTRIBUTING.md.

Tests

- tests/unit/test_docs_presence.py verifies the canonical subsystem docs (TESTING, SECURITY, CONCURRENCY, OBSERVABILITY, PERFORMANCE, DATA_MODEL, SCANNING, QUALITY_STACK, COVERAGE_BASELINE) are present.
- tests/unit/test_architecture_diagrams.py verifies the Mermaid files under architecture/ exist.

Gotchas

- The current structure has **no docs-site generator**; Phase 8 of the completion plan introduces MkDocs Material under website/. Until then these files are read as plain markdown on GitHub.
- docs/superpowers/plans/ is written by the superpowers:writing-plans skill and is not meant to be edited by hand mid-phase.
