BOB-076 closure evidence

Item: BOB-076 (RD2-09) — submodules/jackett fork 1 commit behind upstream (informational) **Type:** Task · **Closed as:** Completed (→ Fixed.md) per §11.4.33 **Closed:** 2026-08-20

Why this was still Queued

The substantive work was ALREADY DONE and the tracker row was never reconciled — the same drift class as BOB-117, found in the same §11.4.238 sweep.

```
$ git log -1 --format='%h %ad %s' --date=short 99a486e
99a486e 2026-08-15 chore(jackett,BOB-076): bump submodules/jackett
v0.24.2353 -> v0.24.2406
```

That commit's own message states: “closes BOB-076 (RD2-09 submodule 1-commit-behind was informational; now 6-releases-ahead)”. The pin it set — 09ecfadea — is the SHA checked out today.

Current drift is inert (measured, not assumed)

```
$ git submodule status -- submodules/jackett
09ecfadea8c4755afe852f78b2de7b7be5ebb1e4 submodules/jackett
(v0.24.2406)
$ git rev-list --count 09ecfadea..origin/master
25
$ git merge-base --is-ancestor 09ecfadea origin/master && echo YES
YES
```

The 25 new commits are third-party indexer-definition churn (24 files: tracker .yml definitions, one indexer's own captcha-login support, one updater housekeeping edit). No core-engine, WebUI-auth or security-boundary code.

Zero runtime linkage — checked, not assumed

```
docker-compose.yml:  jockett uses image lscr.io/linuxserver/
jockett:latest, AUTO_UPDATE=true
scripts/deploy-remote.sh:37  --exclude='submodules/jockett'
scripts/codegraph_validate.sh:110  third-party EXCLUDED (§11.4.79)
```

The live :9117 service runs the prebuilt LinuxServer image and self-updates. submodules/jockett is a vendored reference checkout that is never built, never copied into a container, and is excluded from deployment and CodeGraph indexing. Bumping or not bumping changes nothing at runtime.

Decision

NO further pin change. Advancing it today would be tidiness, not a justified fix (§11.4.124 investigate-before-change). The item is closed because its stated concern was resolved by 99a486e; the residual drift is routine third-party content with no relevance to this repo.

Honest boundary (§11.4.6)

This closes the TRACKER ROW to match reality. It does not assert the vendored checkout is current — it is deliberately 25 commits behind, and that is recorded here rather than hidden.
