

CLOSURE

BOB-091 — Closure Evidence

Revision: 1 **Last modified:** 2026-08-19T12:45:17Z **Status:** Completed
(→ Fixed.md) **Type:** Task **Closure evidence class:** source-verified + runtime-HTTP-probed

Task

Relocate mocked SearchOrchestrator tests to tests/unit/ per §11.4.27 (no mocks/stubs outside unit tests), and author real-service replacements in the original locations.

Investigation (§11.4.6 — verified, not assumed)

Ran the mandated audit:

```
grep -rn "mock.*SearchOrchestrator\|SearchOrchestrator.*mock\|@patch.*SearchOrchestrator" tests/
```

Result — 3 hits, all already under tests/unit/:

#	File	Line	Kind
1	tests/unit/ test_merge_api_route_contracts.py	4	docstring naming the mock target of an @patch("api.routes._get_orchestrator")
2	tests/unit/ test_api_init_coverage.py	220	actual patch("merge_service.search.SearchOrchestrator") docstring pointer — the file monkeypatches
3	tests/unit/ test_tracker_stats_shape.py	18	SearchOrchestrator._get_enabled_trackers

#	File	Line	Kind
			real replacement lives at tests/contract/ test_tracker_stats_contract.py

Zero VIOLATIONS. The mocked tests already live in tests/unit/ (the sole directory where §11.4.27 permits mocks). Prior GA-14 remediation (docs/GOVERNANCE_AUDIT_2026-08-07.md / ..._ROUND2.md) relocated them from tests/integration/ and tests/contract/ and authored real-service replacements in the ORIGINAL paths — cited in-file in every docstring.

Real-service replacements exist

- tests/integration/test_merge_api.py — real HTTP against a real merge service on port 7187, real SearchOrchestrator fan-out, real qBittorrent WebUI calls; NO @patch targets SearchOrchestrator / api.routes._get_orchestrator. Verified: `grep -c SearchOrchestrator tests/integration/test_merge_api.py` = 3 (all in docstring / real fan-out narrative, no mock patch).
- tests/contract/test_tracker_stats_contract.py — real HTTP contract test, no mock of SearchOrchestrator. Verified: `grep -c SearchOrchestrator tests/contract/test_tracker_stats_contract.py` = 4 (docstring + real assertions, no @patch).

Runtime evidence — real HTTP against live merge service

Real HTTP probe (§11.4.5 / §11.4.69
feature_class=merge_service_health):

```
$ curl -sS -m 5 -o /dev/null -w "HTTP:%{http_code}\n" http://localhost:7187/health
HTTP:200
$ curl -sS -m 5 http://localhost:7187/health
{"status":"healthy","service":"merge-search","version":"1.0.0"}
```

Real HTTP 200 with JSON payload — the real-service replacement path (tests/integration/test_merge_api.py) exercises this same live service.

Verdict

BOB-091 satisfied by prior GA-14 remediation. No code change required this session. All three mocked-SearchOrchestrator tests reside in tests/unit/ (legal); the real-service replacements exist at tests/integration/test_merge_api.py and tests/contract/test_tracker_stats_contract.py and drive real HTTP against the live merge service on port 7187.

§11.4.135 regression guard

Existing (compliance is checked by scripts/pre_build_verification.sh invariant checking §11.4.27 mock-scope). No new guard added — the existing invariant would FAIL if any mocked-SearchOrchestrator test were ever placed outside tests/unit/.
