

evidence

Evidence — BOB-076/BOB-116 label-collision cleanup (2026-08-18)

Scope: rename docs/qa/BOB-076/ → docs/qa/BOB-116/ (filesystem, not a git operation — see finding below) + update forward references in docs/incidents/2026-08-18-perceived-forced-logout-2nd.md, docs/QA_DISCOVERY_LEDGER.md, docs/CONTINUATION.md, and the forced_logout_incidents.md memory playbook. Commit-message history is NOT rewritten (§11.4.113).

1. Directory rename

docs/qa/BOB-076/ contained 8 evidence artifacts, all *.log:

```
challenge_pass.log
challenge_polarity_forced_fail.log
const033_challenge_pass.log
journalctl_20-40_to_20-52.log
lid_and_session_events.log
oomctl_snapshot.log
psi_readings.log
ps_LRSS_snapshot.log
```

Finding: none of these 8 files were ever tracked by git.

git ls-files docs/qa/BOB-076/ returned empty before the rename, and git check-ignore -v confirmed every one matches the blanket *.log rule at .gitignore:64. This means git mv fails (“source directory is empty”) — the rename had to be a plain filesystem mv, and git status shows nothing for either the old or new path, before or after. Verified move (identical byte sizes, same 8 filenames, directory now empty at the old path):

```
$ mv docs/qa/BOB-076 docs/qa/BOB-116
$ ls docs/qa/BOB-116/ | wc -l
8
$ ls docs/qa/BOB-076
ls: cannot access 'docs/qa/BOB-076': No such file or directory
$ git status --porcelain docs/qa/BOB-116/ docs/qa/BOB-076/
(empty)
```

Concern (out of scope, flagged honestly per §11.4.6): this is itself a coverage-escape-shaped gap — .gitignore’s header comment at line 2 states “Curated QA evidence lives under docs/qa/ (§11.4.83)”, implying that tree is meant to be tracked, but the blanket *.log pattern silently defeats that for any .log-named evidence file anywhere under docs/qa/, including this entire incident’s raw-capture evidence set. This is independently already-documented (stale label) in docs/scripts/install-resource-pressure-timer.md:115 (“docs/qa/BOB-076/*.log is gitignored despite living under the [curated evidence directory]”) — i.e. Task #77’s own doc already flagged the same gap under the old label. Not fixed here: changing .gitignore scope is a separate, cross-cutting decision outside this task’s declared file scope.

2. Forward-reference updates (grep before/after, per file)

File	BOB-076 mentions before	BOB-076 mentions after	All post-edit mentions inside annotation context?
docs/incidents/2026-08-18-perceived-forced-logout-2nd.md	2 (both bare/stale)	4	yes — 2 in the new top-of-doc NOTE, 2 inline annotated (initially referenced as BOB-076 informal label, corrected 2026-08-18)
docs/QA_DISCOVERY_LEDGER.md		4	yes — id: field now

File	BOB-076 mentions before	BOB-076 mentions after	All post-edit mentions inside annotation context?
	4 (all bare/stale)		reads BOB-116 with an explanatory clause; the other 3 are annotated inline
docs/CONTINUATION.md	1 (bare)	1	yes — annotated inline, IMPORTANT-1 now keyed to BOB-116
forced_logout_incidents.md (memory, outside repo)	1 (bare)	2	yes — one annotated evidence-path line + one new explicit correction line

Revision headers bumped where present: docs/CONTINUATION.md
Revision 23→24 (§11.4.44), Last modified set to the real command-derived UTC timestamp (date -u +%Y-%m-%dT%H:%M:%SZ = 2026-08-18T21:10:20Z), never guessed. docs/QA_DISCOVERY_LEDGER.md has no §11.4.44 header (not in that doc's scope) — left as-is.

3. Whole-docs/ scan (context, not all in this task's scope)

grep -rln "BOB-076" docs/ before this task's edits returned files this task does NOT own, all of which carry LEGITIMATE, correct BOB-076 references (the real, distinct, unrelated Type=Task DB item — RD2-09

jackett fork bump, commit 99a486e) or belong to other subagents' historical evidence and are explicitly out of scope per this task's constraints:

- docs/Issues.md, docs/Issues_Summary.md, docs/Fixed.md, docs/Fixed_Summary.md (+ their .html twins), docs/features/Status.md — the real BOB-076 tracker entry. **Not touched** (explicit constraint).
- docs/qa/task-close-bob076/*, docs/qa/task-77/*, docs/qa/task-44/*, docs/qa/BOB-072-073/backup/Issues.md.pre-fix, docs/qa/task-review-457cca4-a7e55f9-nit-fixes/verdict.md, docs/qa/db-deltas/286192008b35dab7b00c59635ba424ed4b72674b.diff, docs/qa/task-rebuild-verify/summary.md, docs/qa/task-stress-chaos-session/6_systemd_timer_stress.txt — historical or concurrently-in-flight evidence belonging to other subagents/tasks. **Not touched** (explicit constraint — “do not touch other subagents' scopes”).
- docs/scripts/install-resource-pressure-timer.md (+ .html) — 2 residual stale BOB-076 mentions (line 6 task #77 (BOB-076 2nd forced-logout incident follow-up), line 115 the gitignore-gap note quoted above). **Not in this task's declared file scope — left as an honest residual for a future, separately-scoped follow-up.**
- docs/QA_DISCOVERY_LEDGER.html, docs/CONTINUATION.html, docs/incidents/2026-08-18-perceived-forced-logout-2nd.html, and the corresponding .pdf exports — stale generated exports of the .md sources this task DID edit. Regenerating them is a docs-chain (§11.4.106) export-pipeline action, not a plain edit, and was not run here to avoid colliding with any concurrent export/build activity from other in-flight subagents. **Honest gap, not fixed here.**

4. Literal acceptance-command result (context)

The task's literal verification command was:

```
grep -rn "BOB-076" docs/ | grep -v "old label\|informal label"
```

Run as specified, this is **not** empty (64 lines) — for two independent, expected reasons, neither of which represents an un-annotated stray reference introduced or left by this task:

1. **Legitimate out-of-scope files** (§3 above) genuinely and correctly mention the real, distinct BOB-076 tracker item, or belong to other subagents' historical evidence this task must not touch.
2. **The mandated NOTE text is multi-line-wrapped:** the exact NOTE block this task specifies to paste verbatim wraps the words

“informal” and “label” across two separate lines (...as an informal / label that collided...), so a single-line `grep -v "informal label"` does not suppress those two lines even though they are the mandated, correct annotation text, used verbatim as instructed.

Scoped to only the files this task edited, every post-edit B0B-076 occurrence sits inside an explicit “informal label” / “initially referenced as” annotation — verified individually per file in §2 above.
