§11.4.209 review MINOR-1..6 batch remediation

Revision: 1 Last modified: 2026-08-18T00:00:00Z

Evidence for the 6 MINOR findings from `.superpowers/sdd/task-review-457cca4-a7e55f9-report.md`, fixed in the same batch task on top of task #78's IMPORTANT-1 landing.

Finding	File	Verdict	Evidence
MINOR-1	<code>scripts/host-power-management/check-no-suspend-calls.sh</code>	FIXED	<u>minor-1.log</u>
MINOR-2	<code>challenges/scripts/resource_pressure_signature_challenge.sh</code>	FIXED	<u>minor-2.log</u>
MINOR-3	<code>challenges/scripts/resource_pressure_signature_challenge.sh</code>	FIXED	<u>minor-3.log</u>
MINOR-4	<code>challenges/scripts/resource_pressure_signature_challenge.sh</code>	FIXED (design revised after a caught regression — see <u>minor-4.log</u>)	<u>minor-4.log</u>
MINOR-5	<code>scripts/commit-push-all.sh</code>	FIXED	<u>minor-5.log</u>
MINOR-6	<code>scripts/install-dev-tools.sh</code>	SKIPPED — out of declared scope, concurrently owned by another in-	<u>minor-6.log</u>

Finding	File	Verdict	Evidence
		flight remediation stream (see minor-6.log)	

Notable finding during remediation

MINOR-1’s fix required touching `scripts/host-power-management/check-no-suspend-calls.sh`, which was **not** in this task’s originally declared 3-item scope (`challenges/scripts/resource_pressure_signature_challenge.sh + scripts/commit-push-all.sh + this evidence directory`). Before editing it, `git log / git status` were checked and showed **no** recent or in-flight concurrent activity on that file — the safe/reversible/bounded-blast-radius bar per §11.4.101 was met, so the edit proceeded and the file was added to this batch’s `--scope` commit. MINOR-6’s fix location (`scripts/install-dev-tools.sh`), by contrast, showed a commit from the SAME review’s IMPORTANT-3 remediation landing moments earlier — a live sibling stream — so it was left untouched and honestly SKIPPED (§11.4.3) rather than risking a shared-checkout collision.

Regression caught and fixed during MINOR-4’s own remediation

The first draft of the MINOR-4 fix (raising SIG-3’s required EAGAIN hit-count when SIG-2 reads low) was caught, via `verify_resource_pressure_polarity.sh`, regressing SIG-3’s own §11.4.115(F) RED fixture *before* it was ever committed. The design was revised to attach a confidence label to the verdict instead of changing the FAIL threshold — see `minor-4.log` for the full before/after transcript. This is the exact TDD/§11.4.4 test-interrupt-on-discovery discipline this constitution mandates, applied in-session.

Full regression proof (all 5 signature detectors, post-fix)

minor-4.log also contains the complete

verify_resource_pressure_polarity.sh re-run: **5/5 signatures RED CONFIRMED** against their real pathological artifacts after MINOR-2/3/4's fixes landed — zero regression in detection power for any of the five resource_pressure_signature_challenge.sh detectors.
