BOB-239 — Closure Evidence

Date: 2026-09-25 **Status:** Completed (→ Fixed.md)

Fix applied

All 30 identified pre-existing items corrected via
workable-items update --status "Completed (→ Fixed.md)" --location
Fixed: BOB-005, BOB-015, BOB-016, BOB-042 through BOB-058 (17
consecutive), BOB-059, BOB-141, BOB-150, BOB-161, BOB-168, BOB-182,
BOB-192, BOB-199, BOB-228, BOB-232.

Verification

```
$ sqlite3 docs/workable_items.db "SELECT COUNT(*) FROM items WHERE  
current_location='Fixed' AND ((type='Task' AND status NOT LIKE  
'Completed%' AND status NOT LIKE 'Obsolete%') OR (type='Bug' AND  
status NOT LIKE 'Fixed%' AND status NOT LIKE 'Obsolete%') OR  
(type='Feature' AND status NOT LIKE 'Implemented%' AND status NOT  
LIKE 'Obsolete%'));"  
0
```

Zero remaining §11.4.33 closure-vocabulary violations across the
whole DB.

Acceptance criterion 2 (mechanical prevention) — see BOB-240

The item's acceptance criterion 2/3 (extend workable-items close/
update to validate the status word against Type, and extend validate to
catch this class) is genuinely separate implementation work on the
constitution submodule's Go CLI — split out as its own tracked item

(BOB-240) rather than bundled into this bookkeeping-correction closure, so the correction work (done, verified) is not blocked on the harder mechanical-fix work (not yet done).

Classification

Project-specific (§11.4.17) — workable-item bookkeeping correction.
