111	High	Completed (→ Fixed.md)	Task	—	BOB-136 — Closure seam does not bi tracker rows found stale in one swee workable-items diff is blind to body_
112	High	Fixed (→ Fixed.md)	Bug	—	BOB-137 — Merge service on 7187 w the same process still serves 7186 (G starvation by one spinning thread)
113	High	Fixed (→ Fixed.md)	Bug	—	BOB-138 — qbittorrent-proxy health probes only 7186, so a dead 7187 mer reports healthy forever
114	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-139 — SSE _client_gone() swallo exception into ‘client still connected’ raising disconnect probe streams for open)
115	Medium	Completed (→ Fixed.md)	Task	—	BOB-140 — Upstream the healthchec served-ports gate into constitution/sc and thin boba’s copy to a delegator (\$
116	Low	Fixed (→ Fixed.md)	Task	—	BOB-141 — CLAUDE.md claims the G serves 7186/7187/7188 but its contain only 7187 — doc contradicts the Dock
117	High	Fixed (→ Fixed.md)	Bug	—	BOB-142 — SearchRequest fields wer unbounded, so one request could am 43-tracker fan-out carrying arbitrary
118	Medium	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					BOB-143 — Orphaned .worktrees/ dir (unresolvable gitdir) pollute gate scan; manufacture false BOB-126-class find
119	Low	Fixed (→ Fixed.md)	Bug	—	BOB-144 — /theme/stream calls the d probe unguarded — fail-closed but v; uncaught traceback, inconsistent with SSE generators
120	High	Fixed (→ Fixed.md)	Bug	—	BOB-145 — Fix the 7187 wedge: offload memoise Deduplicator.merge_results; regex work stops blocking the async loop
121	High	Fixed (→ Fixed.md)	Bug	—	BOB-146 — Constitution §11.4.252 de undercounts by 29% (30 vs 42 AST gr — 4 distinct blind spots make its outp not a census
122	Medium	Completed (→ Fixed.md)	Task	—	BOB-147 — Triage all 36 §11.4.252 fail 9 real defects fixed, 14 correct idioms vendored
123	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-148 — Standing red unit test not tracked: test_no_credentials asserts h False, gets True — real defect or non-test, undecided
124	Low	Fixed (→ Fixed.md)	Bug	—	BOB-149 — Managed-plugin count di 43/42/48 across constitution, CLAUDE the README badge; the badge is han maintained and unguarded
125	Low	Fixed (→ Fixed.md)	Task	—	BOB-150 — pre_build_verification.sh labels read N/44 but only 35 invarian labelled
126	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-152 — Constitution sweep walks third-party code: 82% of one gate's 38 findings come from submodules/
127	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-153 — Go profile cannot build: g requires go 1.26.2 but the Dockerfile golang:1.23-alpine
128	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-154 — Host venv and production run different starlette versions (1.4.1

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
129	High	Fixed (→ Fixed.md)	Bug	—	BOB-155 — workable-items diff repo. Markdown are in sync' having opened Markdown files when –issues/–fixed
130	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-156 — BOB-145 event-loop regression is load-sensitive and flaky: 8786ms under load vs a 900-1500ms ceiling calibrated on quiet host
131	High	Fixed (→ Fixed.md)	Bug	—	BOB-157 — Our own BOB-137 stall with segfault the merge service: faulthandling dump_traceback(all_threads=True) has an unpatched CPython 3.12 defect
132	High	Fixed (→ Fixed.md)	Bug	—	BOB-158 — tests/conftest.py cannot run on production interpreter: binds asyncio.events._get_event_loop_policy to a private API, while production is 3.12.1
133	Medium	Completed (→ Fixed.md)	Task	—	BOB-160 — Reported-Via: §11.4.202 (2026-08-21T19:02:40Z) Reported-By: AI What (the report, v1.0) Independent §11.4.209 review (IMPOSSIBLE) found two of the feature's strongest assertions checks were never executed by any regression tests/ownership/ test_container_writes_owned_files.py §11.4.115 RED-turned-regression-guarantee FR-011/FR-007, proven via a docker-compose.yml revert mutation — was a failure of tests/integration/ (commit 58d340a) an autouse fixture hang) but no runner test.sh, run-all-tests.sh) was ever extended to cover tests/ownership/. (2) tests/pre_build/test.sh, the §1.1 paired-mutation method in the scripts/pre_build/check_cm.sh garbage was executed by NOTHING — self-reported honestly in commit 04742d7's own message ('STILL OPEN (reported, not fixed): tests/pre_build/ is executed by NOTHING') tracked as a workable item (a §11.4.1 requirements gap) and never wired into pre_build_verification.sh invariant 3

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
134	High	Fixed (→ Fixed.md)	Task	—	globbed only tests/unit/test_.sh. Affected file-scope manifest: ci.sh; scripts/pre_build_verification.sh invariant 30 (UNIT-TESTS-EXECUTED) Reproduction context: grep -rn test_container_writes_owned_files ci.s run-all-tests.sh scripts/ returned zero (only docs/specs mentioned the path); scripts/pre_build_verification.sh shows 30's for-loop globbing only tests/unit/t never tests/pre_build/test_.sh. Acceptance criteria: ci.sh gains a runtime-gated ownership/ stage (skips honestly, rc=0 if podman/docker present); scripts/pre_build_verification.sh invariant 30 covers both tests/unit/test_.sh and tests/pre_build/test_*.sh, verified by an external standalone run of the invariant's exact reporting a non-zero RAN count that includes files from both directories. BOB-161 — Reported-Via: §11.4.202 directive task on 2026-08-21T19:31:10. Reported-By: BOB-092 remediation, finding What (the report, verbatim) names CM-NO-FAIL-OPEN-SKIP as one mandatory pre-build gates: it audits probe helpers and FAILs if any code probe converts an empty or unreachable result a PASS-counting SKIP for a feature class sink-side probe. This project does not. Why this matters now rather than in the abstract: the BOB-092 remediation just TWO fail-opens of exactly this class found in e2e/test_live_stack_evidence.py — the SKIP-on-404 (already removed at 7ba) surviving sibling at test_iporrents_is_authenticated_in_s skipped on 'not authenticated and stage success' while asserting 'treating as timeout'. That assertion was false for m

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					credentials (upstream_http_403) and broken container (plugin_env_missing) which are definitive product failures product already classifies via error_type fail-opens of one class, found one at the §11.4.146 extend-to-all-cases signal §11.4.238 coverage-escape signal together regime did not surface either, an age code did. The remediation's own guard structural and lethal under three distributions, but they LIVE IN THE FILE GUARD, so deleting that file evades the entirely. A pre-build gate is the durable because it audits the corpus rather than Honest boundary (§11.4.6): this item claim the two remediated fail-opens unguarded — they are guarded, with evidence (13 passed in 97.36s against stack). It claims the CLASS has no core detector, so the next instance in a diff invisible again. Affected scope / file-manifest: scripts/pre_build/ (gate above e2e/test_live_stack_evidence.py (guards currently live inside the file they guard Reproduction / context: grep -rl 'CM-OPEN-SKIP' scripts/ tests/ returns exact hit, and it is tests/e2e/test_live_stack_ — the file the guards live in, not a gate needle: the same query for CM-OWN INVARIANTS (a gate that does exist) not files, so the instrument can see gate to the single hit is a real absence, not a (§11.4.201(7)(b)). Acceptance criteria pre_build/ gate named CM-NO-FAIL-C exists, is wired into scripts/pre_build_verification.sh, and audits probe helpers for code paths convert empty/unreachable/error response in counting SKIP for a feature class that sink-side probe. It ships a golden-TRUE real fail-open -> gate FIRES) and a go

					verbatim. RELATED, and worth deciding together rather than twice: BOB-154 rebuilt on 3.12 to match the container runs CPython 3.12.13 while both system venv run 3.14.6). There are therefore two interpreters in play. Whoever rebuilds should confirm rpds resolves for the interpreter afterwards, or this same problem reappears one directory over. HONEST BOUNDARY (11.4.6): this item does NOT any test is wrong or any product code. The product and the venv-run suites are unaffected. What is broken is the documentation entry point. Affected scope / file-scope manifest: host user site-packages (~/.python3/site-packages/rpds/); every C documented ‘python3 -m pytest ...’ in any tooling that uses system python3 than .venv/bin/python Reproduction python3 -m pytest tests/e2e/test_live_stack_evidence.py -q –importmode=importlib -> ModuleNotFoundError: module named ‘rpds.rpds’, raised during collection via the schemathesis plugin -> jsonschema -> referencing._core -> MEASURED root cause: system python but ~/.local/lib/python3/site-packages/rpds.cpython-313-x86_64-linux-gnu.so extension built for 3.13. rpds/init.py ‘from .rpds import *’, and a 313-tagged importable by 3.14, so the submodule does not exist for this interpreter. The CORRECT and unaffected: .venv/lib64/site-packages/rpds/ ships rpds.cpython313-x86_64-linux-gnu.so and’.venv/bin/python3 -m pytest tests/unit/ -v –importmode=importlib – the command CLAs documents – reaches collection with ModuleNotFoundError, OR CLAUDE.1 corrected to document the supported

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					explicitly. Either way the documented and the working command agree (11 guide that misleads is the documentation equivalent of a PASS-bluff). WORKAROUND EFFECTS MEASURED 2026-08-21 — the not free, and the item previously impacted PYTEST_DISABLE_PLUGIN_AUTOLOAD disables ALL plugin autoloader, not just broken one, so anything the suite silently on must be re-enabled by hand: - It breaks pre-existing env-dependent tests in test_plugin_rutacker.py — TestConfig::test_default_mirrors, test_env_mirrors_override, test_get_env_with_default, test_get_mirrors_from_env_empty, test_get_mirrors_from_env_whitespace need an autoloader plugin. PROBLEM caused by any in-flight change: running OWN copy of that file under identical produces the same 5 failures. - It makes -timeout=60 (set in pyproject.toml) a UNKNOWN ARGUMENT unless -p pytest is passed explicitly, so pytest.mark.timeout is silently inert under the naive recipe believed to be time-bounded is not. - autoloader ON and only schemathesis (no:schemathesis), that same file is 96% CONSEQUENCE FOR ANYONE USING WORKAROUND: -p no:schemathesis is strictly better than blanket autoloader where it suffices, because it removes broken plugin. Where the blanket for -p pytest_timeout must be added or the inert, and the 5 env-dependent failures recognised as workaround artifacts not filed as defects. That last point is the the workaround manufactures failures exactly like product defects. This does change the root cause (the venv's rpython-cpython-313 ABI tag CPython 3.14 can

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
138	High	Fixed (→ Fixed.md)	Bug	—	import) or the fix (rebuild the venv – It documents that the interim recipe radius, so nobody reads a workaround as a regression. BOB-166 — WHAT. §11.4.19 requires migration to be ATOMIC: a resolving to Fixed.md, DISAPPEARS from Issue (open-only) and APPEARS in Fixed_S (closed-only). Ten rows violate all three properties right now — they carry a status yet current_location='Issues', so render in docs/Issues.md and are listed in Issues_Summary.md with a status that reads '(→ Fixed.md)', while appearing in Fixed_Summary.md. Any reader of the open tracker is told these are open with MANIFEST (measured 2026-08-21): BOB-128 (Completed), BOB-129, BOB-131, BOB-145, BOB-146, BOB-148, BOB-153, BOB-157 (all 'Fixed (→ Fixed.md)'). Counting: BOB-155/087/157 each gre Issues.md, 0 in Fixed.md, present in Issues_Summary.md, 0 hits in Fixed_Summary.md. ROOT CAUSE (rooted at runtime, not inferred). 'close' performs atomic migration and REQUIRES –even 'update –status' sets any §11.4.15 close value with NO evidence and NO migration and it knows the location, because it has a COPY of the real DB: \$ workable-item –id BOB-065 –db repro.db –status 'Fixed (→ Fixed.md)' update: BOB-065 updated (status=Fixed (→ Fixed.md), type=Task repro.db 'SELECT atm_id,status,current...' BOB-065 Fixed (→ Fixed.md) Issue seem that is supposed to be the ONLY path (close, evidence-gated per §11.4.15) has a parallel unguarded path that reads the same status while skipping BOTH the requirement and the migration. WHY?

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					CAUGHT IT (§11.4.238 coverage-escape) Three standing checks stay GREEN on holding the forbidden row, verified on a poisoned copy from the repo root so no artifact is involved: (1) ‘validate’ → ‘Close’ items, all invariants satisfied’ (it has a status↔location coherence invariant — ‘in sync’ (DB and Markdown agree — WRONG state; agreement is not correct). CM-CLOSURE-SEAM-BINDS CHECK A flags NON-terminal rows whose id appears in work commit; these rows are terminal if they are outside its predicate by construction. This was found by reading a status tally, not by the automated regime — a §11.4.238 disclosure of a channel escape, which is itself a defect. It is standing to the mis-located rows. ACCIDENT (a) ‘update’ REFUSES a terminal status change, names ‘close’ as the correct path, with a §1.1 mutation proving the refusal (re-opening guard must make the mutation pass). (b) ‘validate’ grows a status↔location coherence invariant that FAILS on the forbidden row, a golden-bad fixture and a negative condition. (c) A legitimately terminal row in Fixed mode is not a fire — §11.4.201(1)). (c) The 10 existing rows are drained to Fixed with class-matched evidence per row, or, where a row’s evidence could not be produced, honestly re-opened rather than migrated on a bare assertion. (d) Horizontal boundary: this closes the update-path, leaving the detection gap; it does not claim evidence. (e) historical status write was evidence-based. (f) NOT CLAIMED. No fix is implemented. (g) filing. The 10 rows are untouched; draining them is acceptance (c) and each needs evidence, not a bulk UPDATE. BOB-167 — WHAT. download-proxy and Server-Sent-Events routes. They are too expensive class — long-lived connections.

					independent reviewer of the BOB-133. This is a defect in the isolation work — this swallow is what caused the defect to get that defect into an ‘assert 0 == 1’ mypy error. This is because the EACCES on /config was logged, but the log was discarded while the endpoint kept receiving requests. BOB-200. Verified here directly from source code. This is a filing (the function body and both callers) that was not taken above), not taken on report. Recorded as a defect. BOB-§11.4.238 discovery-channel escape: the defect is in the agent reading code during an unrelated investigation, not by the automated CI. This is a defect — the coverage gap is a defect of equal magnitude to the defect itself. ACCEPTANCE. (a) The defect is that _save_hooks propagates failure — rather than return a status the callers must consistently check. Both endpoints translate a persistence failure into an HTTP error (500-class), never returning a response body; a create that did not persist must return a hook_id. (c) A test drives each endpoint with the hooks file unwritable (read-only) and a patched open raising OSError) and that the endpoint returns non-2xx status AND that a subsequent request does not list the phantom hook — assert on the observable outcome, not on the log line. Paired §1.1 mutation: restore the swallow. The test must FAIL. (e) Audit the same file for other swallows — this is a pattern, and one that is rarely alone. (f) Honest boundary: the defect is to claim the write currently fails in production. The claim is that WHEN it fails the user is notified. The opposite, and the BOB-135 investigation, is that the defect does fail in at least one real environment. CLAIMED. No change made. No assessment of how often the write fails in the operational environment. deployment. RECORDING A SHELL ERROR. MY OWN (§11.4.6): the first version of the defect description was written with the ant command snippet inside backticks in a double-quoted string argument, so the shell ran it as command. The substitution and the text was replaced with nothing — the stored description read

144	High	Fixed (→ Fixed.md)	Bug	—	the exact anti-pattern’. This is the SE this session that backticks-inside-dou has corrupted content (the first many commit message). Fixed here by editing a Python client with no shell quoting. Noted because a silently-truncated description is exactly the kind of quiet corruption §11.4.201(7)(c) warns about. path is part of the instrument, and it without erroring. BOB-174 — WHAT. A corrupt hooks file silently indistinguishable from “no hooks configured”, and the next create then every existing hook while returning Three defects on one path, filed together because fixing any one alone leaves the reachable. A1 — download-proxy/src/hooks.py:104-112. <code>_load_hooks</code> wraps <code>except Exception: logger.error(...)</code> through to return <code>[]</code>. A truncated or <code>hooks.json</code> is therefore reported to even as an empty, healthy hook list. Confirmed source. A2 — the consequence, and this is High. <code>create_hook</code> loads, appends. Given a corrupt file that load turns into <code>save</code> writes a one-element list over the. Every previously-configured hook is. Measured by the implementing agent. the ALREADY-FIXED tree, so this survives. BOB-173 write-failure fix: BEFORE on <code>['prod-hook-0', 'prod-hook-1', 'prod-hook-2']</code> reports : 200 {'hooks': [], 'count': 0} <- ZERO hooks configured DELETE reports {'detail': 'Hook not found'} <- for a hook in the file POST reports : 200 hook_id=3c8a5930-... AFTER on disk : ['3c8a5930-...'] Three prod hooks destroyed HTTP 200 throughout, nothing surfaced to user. A5 — <code>_save_hooks</code> writes with <code>open(path, "w")</code>. A crash, ENOSPC, on

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					write truncates the file in place. That the corruption A1 then reads as “no l A2 overwrites. The same codebase al the correct pattern: theme_state.py:1 tmp-file + os.replace. WHY THE THRE ITEM. A5 manufactures the corrupt f misreads it as empty, A2 destroys the Fixing only A1 leaves truncation read fixing only A5 leaves an existing corrn data-loss trigger; fixing only A2 leave lying about what is configured. The c defect. DELIBERATELY NOT FIXED U BOB-173, and the reasoning is sound. implementing agent identified all thr auditing sibling swallows as that item and declined to fix them in the same because: they change GET semantics endpoint the frontend consumes (200 they need a CORRUPT-file reproduction than the UNWRITABLE-file one BOB- and they need a design decision that genuinely not obvious — a MISSING legitimately means “no hooks config a CORRUPT one does not, and today’s cannot tell those apart. Expanding B scope to cover them would have mea that decision unexamined. ACCEPTA Distinguish MISSING from CORRUPT file remains an empty list; a corrupt error; never silently []. (b) Decide and what GET does on corruption — 5xx, an explicit degraded marker the fron render. This is the design decision, ar be stated rather than inferred from v the patch happens to do. (c) create/de NOT overwrite a file they could not p refuse, do not clobber (§11.4.252: mu external side effect must fail closed). the write atomic via tmp + os.replace theme_state.py’s existing pattern ratl inventing it (§11.4.28). (e) Tests asser

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					USER-OBSERVABLE outcome, not log a corrupt file, assert GET does not call hooks, assert a create refuses rather than destroying, and assert the file still has original hooks afterwards. (f) Paired mutation per guard. (g) NEGATIVE CO (\$11.4.201(1)): a MISSING file must start empty list and a working create; a VA must behave exactly as today. A fix that every load fail closed by failing always fix. A3, RECORDED SEPARATELY, NOT THIS CHAIN. VALID_EVENTS and HookEventType are two sources of true closed set. Verified identical today, un against drift: if they diverge a hook r successfully and then silently never f assertion pinning them would close i CLAIMED. No change made. The BOB failure fix is real and orthogonal — it FAILED write honest; it does nothing SUCCESSFUL write of wrong data der misread file. BOB-176 — WHAT. _get_enabled_trac download-proxy/src/merge_service/s gates rutracker on RUTRACKER_USE RUTRACKER_PASSWORD only. It neve RUTRACKER_COOKIES. So an operato configured with cookies alone — no no password — never has rutracker all, and the tracker is silently absent fan-out rather than failing visibly. W INCOHERENT WITH THE REST OF TH _search_rutracker treats COOKIES as PREFERRED auth path, not a fallback nnmclub sibling DOES check its own variable. So the same codebase holds positions at once: cookies preferred a search site, cookies ignored at the en gate, and cookies honoured for a sibl WHY IT MATTERS MORE THAN IT LO
145	Medium	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					CLAUDE.md documents a standing order to implement a mandate (2026-08-15) that per-tracker cookies files at \${TRACKER_COOKIE_PATH}/cookies_<tracker>.txt are auto-loaded as <TRACKER>_COOKIES before ever starting up, restart, install Stage 6 and start.sh and rutracker is named in that set. So SANCTIONED, documented configuration for this tracker produces exactly the gate ignores. An operator who follows documented instructions gets a tracker that never runs, with no error to explain the MODE. Silent absence, not a visible failure. Same §11.4.201(6) false-null shape as one layer earlier. BOB-172 fixes a tracker that RAN and was REFUSED being reported as empty; this is a tracker that never ran, the merged result simply has one fewer contributor with nothing to indicate PROVENANCE. Found by the BOB-172 implementing agent while tracing the enablement path to locate the status-defect. Recorded here rather than fixed, because: it is a separate defect on a separate seam with its own oracle, and folding it in would have widened BOB-172 past its capture of evidence. ACCEPTANCE. (a) The enablement honours RUTRACKER_COOKIES as an independently sufficient credential, not what _search_rutracker already prefers, or what the nnmclub sibling already does, or asserting that a cookies-only configuration ENABLES rutracker, driving the real _get_enabled_trackers rather than a mock. Paired §1.1 mutation restoring the use of password-only gate — the test must generate a NEGATIVE CONTROL (§11.4.201(1)): a configuration with NO credentials at all, still leave rutracker DISABLED. A fix that enables an unauthenticated tracker is not the gap, because it produces failures

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					searches instead of absent ones. (e) A other trackers' gates for the same asy rather than fixing only the one that v — three positions in one codebase su nobody has checked them together (S HONEST BOUNDARY. Not verified ag cookies-only deployment; read from the BOB-172 agent and recorded on i The reading is specific and checkable whoever takes this should confirm by before relying on it. 146 High Fixed.md) Bug — BOB-177 — W BOB-172 wired an identical 4-line HT guard at five private-tracker fetch sit download-proxy/src/merge_service/s (rutracker cookie :1390, rutracker cre :1468, kinozal :1648, nnmclub :1761, :1934). Only the rutracker COOKIE pa exercised by tests. EVIDENCE (review authored mutation R1, per 11.4.194(6 the BOB-172 independent review): de ONLY the kinozal guard wiring (search.py:1655-1658) while leaving t classifier intact left the full merge_se at 883 passed, ZERO failures. The suit see four of the five sites. FAILING SCI refactor drops or subtly breaks the w kinozal, nnmclub, iptorrents, or rutra credential. A 403 at that site silently f to status=empty with error=None -- t BOB-172 signature -- and no test redd DIRECTION (reviewer preferred): col five duplicated wirings into one shar e.g. _check_search_response(tracker_ status, body) -> bool, so there is ONE and a sixth site cannot be added ung (11.4.251 byte-identical-fork extracti Alternative: parametrise the guard to all five sites with per-site stub sessio ACCEPTANCE: mutating the wiring at five sites reddens at least one test. Pr

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					running the same R1 deletion at each turn. 147 Medium Fixed (→ Fixed.md) BOB-178 — WHAT: download of src/merge_service/search.py:1638-1640 a failed kinozal LOGIN response with login_resp.status not in (200, 301, 302) logger.error(...); return [] -- and sets N diagnostic. FAILING SCENARIO: Cloud returns 403 on takelogin.php. The kino reads status=empty, error=None. That BOB-172 signature exactly: a refusal the user as an empty result set. CONT establishing this is an oversight, not a choice: the rutracker and nnmclub log DO set diagnostics (upstream_captcha_auth_failure), and the iptorrents login falls through to the search fetch where BOB-172's new guard catches it. Kino one leg with neither. FIX DIRECTION: _classify_upstream_http_status(login, "") before the early return, or an auth diag for the status-in-(200,301,302)-by case. ACCEPTANCE: a stubbed 403 on login endpoint produces a non-None the kinozal chip, with a RED captured the pre-fix code first (11.4.115). 148 Medium Completed (→ Fixed.md) BOB-179 — WHAT: the BOB-172 index review demonstrated two further problems report a refusing or unreachable track empty result. Both are PRE-EXISTING neither is a regression from BOB-172 evidence log presents the five-site comparison without stating the boundary (11.4.115) requires un-analysed dimensions be gaps, never silently assumed safe). G exception before resp.status is read. probe B, captured: a connection-refused rutracker yields status=empty, error=http_status=None, metadata.errors=[metadata.status=completed. Each _se

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					method swallows exceptions (except logger.error; return results) before _s error handling can see them, so a tra DOWN is indistinguishable from one genuinely empty. GAP B -- soft refusal 200. Reviewer probe A, captured: _classify_upstream_http_status(200, <body>) returns None, which is CORRE design (a 2xx is a usable response; bo triggering would risk the over-fire th controls exist to prevent). But all five GETs use aiohttp's default allow_redi so a session-expiry 302 -> login-page- parses to zero rows and reports emp DIRECTION: Gap A needs the excepti a diagnostic rather than being swallo needs a DISTINCT detector (final-URL login-form marker) with its own RED NOT a widening of the status-code tr ACCEPTANCE: both gaps closed with REDs, or explicitly closed per 11.4.11 evidence. Immediate sub-task: apper gaps paragraph to docs/qa/BOB-172/ fix_evidence_20260822.log. 149 (→ Fixed.md) Bug — BOB-180 — download-proxy/src/api/routes.py:72 status=captcha_required with a hard message naming RuTracker: 'RuTrack CAPTCHA. Use /api/v1/auth/rutracken FAILING SCENARIO: a whole search r results and the captcha-flavoured dia came from NNMClub's Turnstile, not The user is told to visit a RuTracker c endpoint for an NNMClub problem. S BOUNDED: the full errors[] and track travel in the same response payload, is present and a client that reads the misled -- only the headline is wrong. was revived by BOB-172's error propo (correctly: suppressing that propagat recreate the same false-null one laye

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					11.4.247) and is already covered at the layer by tests/unit/api_layer/test_routes_coverage.py:782. FIX DIR derive the message from the tracker(actually erred rather than hardcoding SCOPE NOTE: api/ was owned by a si stream during BOB-172; the author w not to touch it. ACCEPTANCE: an NNM captcha diagnostic on a zero-result s produces a headline naming NNMClu High Fixed (→ Fixed.md) Bug — — WHAT: scripts/generate_markdown_exports.sh accepts arguments. It unconditionally scans PROJECT_ROOT/*.md, docs/ recursive scripts/ recursively (scan loops at line 105/111/116 as of 2026-08-23; they were when this was filed — line numbers 105/111/116 as of 2026-08-23; they were the BOB-169 fix, the substance is unclear was independently verified by executing invoking the generator with an explicit produced an out-of-scope export and requested one), and PROJECT_ROOT from BASH_SOURCE (line 17). A caller writes 'bash scripts/generate_markdown_exports.sh docs file.md' gets a WHOLE-TREE run with argument silently discarded. WHY IT the caller reasonably believes the run scoped to one file. It was not. In a sha checkout with parallel work streams regenerates any export whose .md is its derived files anywhere in the tree artifacts in other streams' scopes and BOB-068 auto-commit hazard, into a stream's commit. CLASS: a false afford script's interface implies a capability have (11.4.201: an interface must meet claims). FIX DIRECTION: either accept path arguments and honour them (so run to exactly those files), or REFUSE

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					clear message when arguments are p Silently discarding them is the one o must not remain. ACCEPTANCE: pass either scopes the run to it, or exits n naming the unsupported argument. A capturing today's silent-discard beha (11.4.115). LIVE INSTANCE, MEASUR 2026-08-23 (this is no longer hypothe During the BOB-169 fix the conductor the generator with an explicit path to ONE document. The argument was d and the whole tree was scanned. It g docs/qa/BOB-174/DESIGN_DECISION. {html,pdf,docx} at 11:50 -- a SIBLING document, while that stream's autho editing the source (.md mtime 12:00) exports were therefore stale on arriv additionally carried the pre-fix BOB- defect. The sibling author independe reported them as stale in its own har having no idea another stream had c them. SECOND-ORDER LESSON worth with this item: the conductor's attem the blast radius ALSO failed, and fail 'git status --porcelain \\\ grep -E "\.(htr returned only its own files and read but docs/qa/BOB-174/ is an UNTRACK DIRECTORY, which porcelain collapse single line, so the grep was structur incapable of seeing the files inside it (a): matched the wrong surface; the c read as absence). The instrument tha it is 'find BOB-182 — OPERATOR DECISION (2 §11.4.66 interactive clarification): MONOTONE RATCHET §11.4.224(E) adoption answer, recorded as consun the adoption model for CM-EXPORT- VALID is the MONOTONE-DECREASE The count may only go down, never u
151	Medium	Fixed (→ Fixed.md)	Task	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					Immediate hard floor, changed-code-deadline, and per-corpus phase-in were offered and NOT chosen. This closes BOB-182 — the half that was genuine operator's. THE REMAINING HALF IS DEFECT STILL OWED: BASELINE is a constant, so the ratchet does not actually — on improvement the gate PASSES the value to lower it to, but nothing happens and the gate keeps permitting regression the original count after the corpus has must NOT collapse §11.4.249 role separator gate that writes its own threshold during build run becomes a PRODUCER as well GATE. Acceptable shapes include a pre-baseline the gate READS but never writes lowering via a separate explicitly-invoked command, or a gate that FAILS loudly if live count is below baseline so drift becomes actionable refusal. This answer is recorded consumer DATA per §11.4.35 — it is the operator's stated choice, not an agent's and supersedes any prior agent-chosen on this question. Options not chosen above so a future reader does not re-settled call (§11.4.112(5) bounded-verdict discipline applied to decisions). — pre-text follows — WHAT: CM-EXPORT-COMMAND VALID (pre-build invariant 50) adopted pre-existing violations via a monotonic ratchet rather than a hard floor. Two owed. (1) THE ADOPTION DECISION OPERATOR'S, NOT THE SCRIPT'S. 11.4 requires the brownfield adoption question SURFACED to the operator and the answer recorded as consumer DATA – never a ratchet. What exists today is a header plus a BOBA_EXPORT_CHARSET_BASELINE override: that DOCUMENTS a decision made, it does not RECORD an answer the operator gave. The independent review

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
152	High	Fixed (→ Fixed.md)	Bug	—	judged the choice defensible and won't reverse it (a hard floor on 301 violations if the build unreachable, which 11.4.23 11.4.101 favours the reversible option). I correctly held that it is not yet complete. Options for the operator: immediate (BASELINE=0) / keep the monotone regression corpus phase-in / changed-code-only scheduled full-corpus deadline. (2) THE RATCHET DOES NOT ACTUALLY RATCHET. BASELINE is a hardcoded constant. CANNOT improve the gate PASSES and PASSES value to lower it to, but nothing lower. The gate keeps permitting regression all the way back to 301 after the corpus heals. The fix now says tightening is MANUAL rather than claiming automatic behaviour that doesn't exist (11.4.6), but the honest statement is stopgap, not the fix. WHY IT WAS NOT WITH THE FIX: a gate that writes its threshold during a pre-build run becomes PRODUCER as well as a GATE (11.4.24 separation), and that is a design change. The operator should approve rather than a side effect. ACCEPTANCE: the operator's adoption answer recorded as consumed and either a persisted baseline the gate and never raises (with the role-separation question answered), or an explicit decision. manual tightening is acceptable. BOB-183 — The compiled Angular build shipped at download-proxy/src/ui/dist/browser still carries the BOB-164 color defect verbatim: scanned 2026-08-23 21 violation nodes on darcula/dark and darcula/light, while the same sources on scratch path report 0 across all 16 palette mode combinations. The fix is therefore at the SOURCE layer and absent at the layer, so §11.4.108 layer 2 is NOT closed.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
153	—	Fixed (→ Fixed.md)	Bug	—	users still see the low-contrast dashb compounding facts make this silent m obvious: dist/ is gitignored, so the div never shows in a diff; and scripts/ins asserts only that the directory EXISTS that it is newer than the sources it wa from, so a stale bundle passes install unchallenged. Acceptance: install (or equivalent gate) FAILS on a bundle o sources, the bundle is rebuilt, and do BOB-164/axe_contrast_scan.py run ag download-proxy/src/ui/dist/frontend/ exits 0 with zero violation nodes and blocking incomplete nodes. BOB-186 — workable-items diff retur and the verdict “DB and Markdown a on a PARTIAL read: invoked with –iss without –fixed it compared 77 Markd against 184 DB items and called that printing both mismatched counts in output while 107 DB items were neve compared against anything. Measure 2026-08-25: (A) no markdown paths – REFUSES exit 1; (B) –db-only -> hones Markdown compared”; (C) –issues al 0, “in sync (compared 77 Markdown against 184 DB item(s))”. The 11.4.20 null: a partially blind instrument retu same quiet green a genuinely-synced returns. IMPACT — CORRECTED 2026 original filing OVERSTATED this. I wr CHECK 2 of the 11.4.106(F) commit se exposed. It was NOT. scripts/hooks/do commit-seam.sh:277 passes BOTH –is –fixed, and a repo-wide sweep found executable caller that breaks: the two callers (that seam and pre_build_verification.sh:549) both p paths; the single-path hits are prose o files plus a static-scan test fixture. So

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					was real and latent, never live in this The corrected claim is: any FUTURE s caller would have been silently mis-t PROVENANCE, twice corrected. A suk attributed the false-null to the no-pat which actually refuses correctly; the re-measured and relocated it to the p Then the fixing agent corrected the c on impact. Both corrections are recor neither wrong version propagates. F (uncommitted, constitution submodu to upstream tip 7f16739 before edit p Design: refuse by default (11.4.201(4) narrow per-tracker comparison PRES behind an explicit –partial-scope rath deleted (deleting an existing docume capability would be an 11.4.122 silen mirroring how –db-only preserved th Markdown shape. Keyed on MEASUR content, never on flag presence — a l zero Fixed rows IS fully accounted fo alone and still passes, so flag-keying traded the false-null for an 11.4.201(3 positive refusal. Resulting property: ‘ reachable only when the two printed account for each other. 154	—	Fixed (→ Fixed.md)	Bug	—	is not stuck-on-FAIL. Needle A (flip B status, Issues leg) detected exit 1. Need (delete BOB-067 on the FIXED leg - the this defect was blind to) detected as “DB, absent in Markdown” (200 vs 201). Each needle byte-verified applied before running. HONEST GAP (11.4.6): UNKNOWN whether the shipped binaries are byte-reproducible from HEAD source - the rebuilt. Both were proven to carry the and behave identically on the real code is the behavioural evidence this closely. No claim is made about classes different compare (revision headers, *_Summary). BOB-189 — WHAT: the fail-open scan shape-(A2) heuristic cannot distinguish ‘False’ meaning PROCEED-AS-IF-FINE. ‘return False’ meaning REFUSE. It flags textbook fail-CLOSED guards as fail-c defects: <code>_is_safe_fetch_url</code> (x3), <code>_qbit_add_succeeded</code> (x2), and the ho boundary guard. INDEPENDENTLY V 2026-08-25 by the conductor rather than on the triage agent’s word: downloading <code>api/routes.py:1122</code> defines <code>_is_safe_fetch</code> returning bool, and its only call site reads ‘if not <code>_is_safe_fetch_url(url)</code>: <code>logger.warning(Refusing SSRF-unsafe URL (non-public target); skipping); continue</code> False return REFUSES the URL. WHY MATTERS: per §11.4.201(1) a false-positive refusal is a FAIL-bluff of equal severity negative pass, and here the consequence worse than noise - acting on the finding mean making the SSRF guard stop returning False, i.e. deleting an SSRF protection gate. A gate that instructs you to remove security control is actively dangerous. merely imprecise. REPRO: run the fail scan; observe six hits; read each call

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
155	—	Fixed (→ Fixed.md)	Bug	—	ACCEPTANCE: the scanner distinguishes shapes from proceed-shaped False records, site-aware, or an audited waiver list (entry justification), the six drop out, golden-FALSE fixture containing a record closed guard is added so the discriminator itself falsifiable per §1.1. BOB-190 — WHAT: ~/.local/lib/python3.14, so pydantic_core and rpds fail to load and every test importing FastAPI dies at import time. CONFIRMED NOT OURS: an untested file fails identically, so this is environment pre-existing. WHY IT MATTERS: CLAUDE documents ‘python3 -m pytest tests/unit/ -import-mode=importlib’ as the canonical invocation and that documented command currently cannot run - docs and host mismatch the §11.4.99 misguidance class at the environment layer. scripts/run-tests.sh sidesteps it by selecting .venv/bin/python working path exists and simply is not in docs tell a reader to type. IMPACT: any following CLAUDE.md literally concludes the suite is broken; worse, an agent could go green by rewriting tests. ACCEPTANCE: repair the host site-packages so the docs command works, or correct CLAUDE TESTING.md to name the venv interpreter canonical - decided explicitly, not left to whoever hits it next. Discovered outside the fail-open triage agent, so per §11.4.2 also owes a coverage-escape note: no check asserts the documented test in fact actually runs. BOB-192 — WHAT: the BOB-161 gate has 6 real fail-open skips RATCHETED rather fixed. Ratcheting is the constitution’s brownfield default (§11.4.135/§11.4.2)

159	—	Fixed (→ Fixed.md)	Bug	—	contextlib.suppress(Exception) around IDENTICAL call -> 'PASS - no swallow exception ... anti-patterns found'. Both untrusted input with an irreversible both swallow everything; one is caught is not. WHY IT IS WORSE THAN A PL pyproject.toml enables ruff's SIM rule SIM105 is 'use contextlib.suppress in except-pass'. Our own linter therefore authors to rewrite the form this gate into the form it CANNOT. The two too pulling in opposite directions and the runs more often. Every SIM105 autof shrinks this gate's coverage while the down, which reads as progress. CON FOR THE NUMBER: the scanner's find is a FLOOR over try/except shapes, not of swallows. Any statement of the form 'open sites remain' must be read as 'N except shapes'. ACCEPTANCE: the scanner recognises contextlib.suppress (a Win items call contextlib.suppress with a exception type) and applies the same capability test; a golden-TRUE fixture suppress form; a golden-FALSE fixture suppress wraps a single-capability diagnostic-emitter and must NOT fire; and an exception decision on the SIM105 tension - either the shapes this gate governs, or accept and teach the gate to read it. Discover §11.4.252 remediation agent when its MINOR-3 fix required using contextlib at three diagnostic-emitter sites; those are legitimate and justified in-source BOB-197 — OPERATOR DECISION (2 §11.4.66): GENERATE THE TOKEN A IT The conductor generates a 32-byte token and writes BOBA_API_TOKEN in the operator configures clients with it 2026-08-26: token generated via

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					secrets.token_hex(32), appended to .env file. Safety verified BEFORE writing (§11.4.10): .env matched .gitignore:27 was untracked (needle-proven — the matcher confirmed docker-compose. tracked, so the negative is real); a \$9. backup was taken and is itself ignore write re-check confirmed .env still ig absent from git status. Pre-store audi only tracked BOBA_API_TOKEN= occur are the docker-compose passthrough {BOBA_API_TOKEN:-} and prose in the challenge — no literal value has ever committed. STILL OWED, and the iter open until it lands: the BOOT-TIME II (§11.4.254) that refuses to start LAN-I when the token is unset or empty. Warming is a state fix, not a defect fix - §11.4.226(5) is explicit that a state-on cannot close a defect item. Options n operator sets it themselves with the i blocking until then; invariant warns blocks on a named date. Recorded as DATA per §11.4.35 — the operator's s choice, not an agent inference. Optio chosen are named so a future reader re-litigate a settled call. --- prior item --- OPERATOR DECISION (2026-08-26) BOBA_API_TOKEN and keep 0.0.0.0, h BOOT-TIME invariant that refuses to bound with the token unset. This iter invariant. MEASURED FACT, not infer download-proxy/src/api/routes.py:83 require_api_token() reads BOBA_API request time and returns immediately unset or empty. Its own docstring sta plainly: "BOBA_API_TOKEN unset/em return (OPEN). This is the DEFAULT a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					preserves the current no-auth contra workflow". docker-compose.yml:237 BOBA_API_TOKEN=\${BOBA_API_TOK the container inherits empty unless t declares it. The operator .env does N it, needle-verified per 11.4.201(7)(b): matcher hit QBITTORRENT_DATA_DI same file, so the miss is a real absenc blind read. The qbittorrent-proxy cor RUNNING and LAN-bound at measur time. Consequence: the ten routes th guard resolves as auth-wired are ope practice on a default deploy. WHY A GATE CANNOT COVER THIS. The BOB asserts static route WIRING - that a Depends(require_api_token) marker handler, decorator or router. It canno runtime ARMING, which depends on read per request. Claiming the static it would be exactly the bluff the gate prevent (11.4.262: machine evidence match the layer it claims). This is a b invariant class per 11.4.254. ACCEPTA boot-time check that, when the listen bound (not loopback), refuses to star non-zero exit and a named cause if BOBA_API_TOKEN is unset or empty, state becomes UNREACHABLE rather default. Paired 1.1 mutation: remove prove the service starts LAN-bound-a Golden-FALSE per 11.4.201(1): a loop listener with the token unset must N refused, or the check becomes a false refusal blocking legitimate dev work COVERAGE-ESCAPE NOTE: found by reading source during BOB-102 guar construction, NOT by the automated which is itself the defect class 11.4.23 The boot-time check IS the new autom check that would have caught it.

160	—	Fixed (→ Fixed.md)	Bug	—	BOB-198 — OPERATOR DECISION (2 §11.4.66): REFUSE TO START LAN-B Go profile gets a boot-time guard: bin only, or refuse to start. It does NOT go middleware in this cycle. Rationale c the decision: the profile is opt-in via - was not running when measured, and for development — so closing the exp a guard rather than a parity implement Options not chosen: write auth midd parity with the Python route set (real it would partially un-defer BOB-101); dev-only with no guard (rejected — n would enforce it, and the next -profil this network silently re-opens 22 rou ACCEPTANCE: a boot-time check that the listener's bind address and refuse when it is not loopback, with a paire mutation proving the check FAILs on bind, and a golden-FALSE proving a l bind is NOT refused (§11.4.201(1)). Sc reminder recorded so it is not lost: th covered by BOB-101's parity deferral about ports; folding it in would be a verdict leak. Recorded as consumer I §11.4.35 — the operator's stated choi agent inference. Options not chosen so a future reader does not re-litigate call. — prior item text follows — MEA conductor-verified independently of reporting subagent. qBitTorrent-go/c qbittorrent-proxy/main.go registers e three middlewares, at lines 62, 63 and middleware.CORS, middleware.Logg middleware.GinRateLimit. There is N authentication middleware and no p auth dependency. main.go:119-121 b addr=":" which is ALL interfaces, so c is LAN-reachable when the profile ru 22 routes, of which the mutating one most - POST /api/v1/download, POST

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					magnet, DELETE /api/v1/hooks/:id, PORT parity, DELETE /api/v1/schedules. A LAN peer can queue downloads and delete webhooks with configuration with no credential. PARITY is stated as fact: PUT /api/v1/theme is available on the Python service and open in Go. The asymmetry holds for the download, but not for schedules mutations. Two implementations of one advertised surface disagree about whether it needs a credential. RELATIONSHIP: BOB-101 (Go parity deferred past v1.10.0, operator decision 2026-08-26): that download is covered PORT parity - the Go container listens on :7186 and :7188 as well as :7187. It does not cover an authentication hole, and the Python service was not asked about one, because the question has not been measured when the question was first posed. Treating this as covered by the Python service would be a 11.4.112(5) verdict leak: covered by a bounded decision outside the scope of the Python service supports. This item stands separately from BOB-101, severity is NOT settled by BOB-101. MITIGATION: FACT, so severity is not overstated: the Python service is opt-in via -profile go and was NOT covered by measurement time (the container listens on qbittorrent-proxy, the Python service listens on Go sibling). The exposure is latent, not covered by ACCEPTANCE: either auth middleware is set on the Go service with parity to the Python service, or an explicit operator decision requires the Go profile as dev-only that must not be used to start LAN-bound - with a guard enforcing parity, whichever is chosen. BOB-199 — OPERATOR DECISION (2026-08-26): §11.4.66): FLAG NARROW SUPPRESSION WITH AN IRREVERSIBLE CAPABILITY scanner flags a narrow contextlib.suppress() flag ONLY when combined with an irreversible capability (delete / truncate / kill) — that actually causes harm. Idiomatic

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					tolerances stay quiet, so the gate keeps its credibility and no false-positive storm alerts lead readers to ignore it. Options not chosen to fix the asymmetry permanently with a hard statement; flag all narrow suppress all existing sites via a justified exemption. MEASUREMENT CORRECTED TWICE. The second correction explains the first: the '37 narrow sites, all idiomatic' was produced by this conductor without verification, measured by the authoring agent as CONTAMINATION (§11.4.201(10)) — 2 third-party + 9 sibling-agent worktrees, the very tree being measured + 1 real instrument was counting other agents' duplicates of its own subject. Reproduced figures, each with its scope stated: core repo 0 narrow with-suppress; boba DANGER_ROOTS 0 narrow with-suppress narrow except-pass; boba repo minus 1 narrow with-suppress (a suppress(narrow except-pass RETRACTED-AND 2026-08-26 per 11.4.201(9): the figure previously recorded here reproduces scope and is withdrawn. Measured replacements, each with its scope and independently reproduced: 34 narrow pass git-tracked first-party (canonical narrow except-pass on-disk minus scope (the 'minus vendored' scope this sentence states). Brackets that explain the bad ALL-except-pass git-tracked and 113 pass on-disk-minus-scratch straddle ! was a class-scope conflation (narrow a corpus-scope one. The 35 cited later record is the same measurement at g scope and agrees with 34 within one 'every one idiomatic' claim was also except-pass census contains SystemE unit/test_plugin_torrentscsv.py:305,3 is not a benign tolerance. CORRECTIO

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					2026-08-26: a ‘KeyboardInterrupt x1’ written in this sentence was itself un and is WITHDRAWN — it reproduces NEITHER stated scope. Independent over git-tracked *.py: ZERO genuine ‘KeyboardInterrupt: pass’. The only g instance in the checkout is .worktree workflows/tests/unit/test_main.py:63 sibling-agent scratch worktree, i.e. th observer-contamination class (11.4.2 very record teaches to exclude — and main-tree textual match (tests/unit/ test_graceful_shutdown.py:165) sits i triple-quoted string literal, a carrier (11.4.201(7)(a)). Recorded because th instructive: it was introduced BY the that removed the 97, so a correction exempt from the discipline it applies as consumer DATA per §11.4.35 — th stated choice, not an agent inference not chosen are named so a future rea not re-litigate a settled call. — prior i follows — RESIDUAL ASYMMETRY su the BOB-195 fix, reported rather than closed. After teaching the scanner W BROAD suppress (Exception / BaseEx detected with the same severity as tr pass. A NARROW suppress (suppress(FileNotFoundError)) is not semantically identical narrow try/ex FileNotFoundError: pass IS flagged. S SIM105 rewriting a narrow handler s that site out of the gate’s scope, a sma of the exact mechanism BOB-195 was close. WHY IT WAS NOT CLOSED IN 7 with the measurement that decided i authoring agent reported 37 narrow sites, all idiomatic. CORRECTION (202 independent review): that figure DOI REPRODUCE and this conductor prop into this item as fact without verifyin

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					error is mine, not the reviewer's. Me constitution repo has 0 narrow with sites; boba first-party has exactly 1 (a suppress(OSError)). The nearest corp 35 narrow except X: pass handlers i party - a DIFFERENT construct - and census (OSError x7, ImportError x7, BrokenPipeError x3, RuntimeError x ValueError x2, FileNotFoundError x2 IndexError x2, SystemExit x2) contra one idiomatic': a bare SystemExit: pa benign tolerance. The two population be conflated, and the distinction is th substance of this item. The false-posi argument therefore rests on the 35 n except-handlers, not on 37 suppress : strength should be re-judged on that which under 11.4.201(1) is a FAIL-bl severity to the gap it would close, and practice because it trains readers to i gate. The subagent recorded the asyn the gate header as a known gap rather shipping the storm. That was the right is why this is a separate tracked item an unfinished one. THE DECISION IS OPERATOR'S, mirroring BOB-195 itse accept the asymmetry permanently, r gate header stating it so no reader m count for a census; (b) flag narrow su ONLY when combined with an irreve capability (delete / truncate / kill), cat shape that actually matters and leavi idiomatic sites quiet; (c) flag all narrow and absorb the 37 via a justified exer like the LAN-route guard uses. RELAT worth carrying: the five newly-visibl production sites in download-proxy/ merge_service/search.py (1294, 1303, 1333) wrap proc.kill / os.killpg / proc. BOB-126 cleanup path. The conducto the 11.4.263 pgid guard IS present an

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
162	Medium	Fixed (→ Fixed.md)	Bug	—	both killpg sites - _pid and _pgid each isinstance(int) and > 1 before the sys the BOB-126 forensic reasoning inline sites are true-by-the-scanner's-definition SAFE in fact, and want a justified execution entry rather than a code change. BOB-200 — WHAT: scripts/gates/cm_dangerous_combination_fail_close builds its scan file list with find(1). If DIES (permission error, resource exhausted interrupted), the gate receives an EM and interprets that as 'no files in scope topology SKIP -> exit 0. The failure IS stderr but SILENT in the exit code, so gating on exit status reads a dead instead a clean corpus. WHY IT MATTERS: the textbook 11.4.201(6) FALSE-NULL – a instrument and a clean artifact return identical quiet zero. It is also a 11.4.2 OPEN on exactly the 'cannot enumerate corpus' condition where the gate's own discipline is to fail CLOSED. A gate that see must refuse, not pass. AFFECTED constitution/scripts/gates/cm_dangerous_combination_fail_close find invocation and the empty-list branch EXISTING – NOT introduced by the BOB change; found by the independent reviewer while reviewing that change explicitly scoped OUT of its remediation REPRODUCTION: make find(1) fail during gate run (unreadable scan root, or a returning non-zero with empty stdout observe the gate exit 0 with a topology message, indistinguishable from a gate empty corpus. ACCEPTANCE: (1) the gate distinguishes 'find succeeded and found files' from 'find failed' – check find's not only its output; (2) a failed enumeration FINDING (non-zero exit) naming the

It deliberately d assert "the probe must call stat %g"— implementation assertion that surviv cosmetic fix AND hard-wires one fix asserts the user-observable invariant probe_location(L) == ok IFF ownersh --dry-run selects ZERO items under L 4 passed / 1 failed / EXIT=1, the failur PRECONDITION certifies it (ok) while reports it broken (selects:2)". VALIDA AGAINST BOTH CANDIDATE FIXES fr COPIES (production untouched): bas FAIL(1) · narrow-the-repair PASS(0) · probe PASS(0). Golden-FALSE passes so neither direction can go green by everything. That is what makes this direction-agnostic rather than a vote NOT APPLIED — scripts/ ownership_repair.sh:963: - find_args "\${OP_UID}" -o ! -gid "\${OP_GID}" \) -j '%U\t%G\t%m\t%p\0') + find_args+=(! {OP_UID}" -printf"%U 170 BOB-210 — WHAT: scripts/ ownership_precondition.sh:342-348 the docker branch of detect_rootless documented-not-measured (accurate verbatim). The header then claims th built so that ‘an unverified reading c manufacture a refusal’. IT CAN. Line CONFIDENT rootful verdict whenever info succeeds with non-empty output no name=rootless field. Only the FAIL fall through to unknown (:387-394). T TO HARM: PUID=0 is declared in doc compose.yml:32 (and again for jacke deliberate per project policy). With a rootful verdict, that reaches the R3 r :517. So a genuinely ROOTLESS Dock whose docker info output SHAPE diff the documented one gets a FALSE RE

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
173	critical	Fixed (→ Fixed.md)	Bug	—	produced by a branch the source itself was never measured — precisely the the header promises is impossible. THE PROBLEM (§11.4.245 independence): tests DO cover this path (tests/unit/test_ownership_rootless_detection.sh) the shim's output shape was authored SAME documentation as the code. Our code share the unvalidated premise, cannot discover that the premise is wrong confirms the code matches the doc; not confirmed the doc matches Docker. ACCEPTANCE: (1) either the header corrected to match :413's real behavior is changed to yield unknown when the is unverified — the two must agree (2) the docker branch's premise is validated REAL docker info output from a real daemon, or the branch is honestly not unmeasured at the point of USE, not header; (3) if validation is operator-g (a rootless Docker host), record it as §11.4.21 rather than leaving the header promise standing. ALSO VERIFIED G recorded so it is not re-investigated: unknown branch is handled IDENTIC both consumers (R3 :519-531, R4 :832 both a named SKIP, both return 0, neither refuses), ROOTLESS_VERDICT is cached so both read ONE measurement, and trap golden-FALSE fixture EXISTS (test_ownership_rootless_detection.sh drives name=rootless-lookalike inside path and must NOT read rootless; string guard at :396-411 uses exact field equality substring). DISCOVERY CHANNEL (§1 found by the BOB-206 verification string BOB-212 — WHAT: .gitignore:31 is a glob <i>credentials</i>, followed by a HAND MAINTAINED per-file allowlist of ! ex

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					(lines 34-50). Any NEW source file which contains 'credentials' (or 'creds') is silently ignored: git add refuses it and git status reports NOTHING. The author gets no signal that the file simply does not exist as far as the repository path is concerned. HOW IT SURFACED: BOB-204 stream authored a RED test file <code>credentials_failclosed_test.go</code>. It vanished because the agent noticed only because it went looking for the file it had just written. It renamed it to <code>bob204_failclosed_test.go</code> to escape both <code>credentials</code> and <code>creds</code>, and the file became visible. A silent deliverable loss, caught by the needle rather than by any gate. INDEPENDENTLY CONFIRMED BY THE CONDUCTOR, confirmed by the needle proven: <code>git check-ignore -v --no-index qBitTorrent-go/internal/jackettapi/credentials_failclosed_test.go</code> -> <code>.gitignore:31:credentials</code> (IGNORED) <code>git check-ignore -v --no-index qBitTorrent-go/internal/jackettapi/zzz_probe_test.go</code> -> no match (not ignored) <- the needle: instrument probe saw it, seeing, so the hit above is real git check-ignore -no-index frontend/e2e/credentials.spec.ts -> <code>.gitignore:31:credentials</code> (IGNORED) <code>git check-ignore -v --error-unmatch frontend/e2e/credentials.spec.ts</code> -> tracked SECOND, LATENT INSTANCES <code>frontend/e2e/credentials.spec.ts</code> is matched by the same rule and survives ONLY because it was already tracked (git honours the index over <code>.gitignore</code> for tracked paths). Despite the add it — an ordinary refactor, a branch operation, a file move — and it disappeared silently. It is one routine operation and a file being lost. (For contrast, <code>credential-dialog.component.spec.ts</code> is genuinely covered by the DIRECTORY rule !from <code>app/jackett/credentials/</code> at line 43, not a file entry.) WHY THIS IS A §11.4.201(1) NULL, NOT MERELY AN INCONVENIENCE: the blind instrument and the clean tree

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					identical quiet zero. git status showing means BOTH ‘no new files’ AND ‘a new file but is invisible’. There is no signal that distinguishes them. The commit path is something every other gate’s output event travel through — cannot see its own path. WHY IT IS NOT SIMPLY ‘ADD ANOTHER FILE’ that is the mechanism that produced the problem. A hand-maintained allowlist against the glob has the §11.4.251/§11.4.205 shape. A future legitimate credential-named source needs a hand edit nobody will remember to make, and the failure mode of forgetting is SILENT. The same shape as BOB-205’s. The maintained DANGER_ROOTS: a list that is edited in lockstep with the tree, with the gate that notices when it was not. TENSION. RESOLVE HONESTLY (§11.4.10 vs §11.4.205) the glob exists for a real reason — §11.4.205 forbids credential material reaching the gate. A broad deny-all is the conservative-safest fix. Narrowing it carelessly would re-open the leak channel. So the fix is NOT ‘delete the file’. Candidate directions, operator decision: (a) RESOLVE HONESTLY (§11.4.66): (a) narrow the deny to what carries secrets — extensions and directories (e.g. <code>.env</code>, <code>secrets/</code>, <code>credentials.json yaml etc</code>) rather than every path containing the name; (b) keep the deny-all but add a GATE that when an untracked file matches an ignore rule AND lives under a first-party source root that has a source extension, so the swallow is loud instead of silent; (c) both. (b) alone is false-null even if the glob stays exactly the same and is the smaller change. ACCEPTANCE: A NEW credential-named source file under a first-party source root either commits normally or produces a LOUD refusal naming the problem. If blocked it and the remedy — never silent. The RED that creates such a file and asserts the current silence, flipping to the loud path.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					(§11.4.115); (3) a golden-FALSE providing secret material (a .env, a key) is STILL the §11.4.201(1) guard, because a fix to credentials to close a false-null is stricter than the defect; (4) frontend/e2e/credentials.spec.ts is made safe by rule than by the accident of already being a DISCOVERY CHANNEL (§11.4.238): for BOB-204 stream when its own deliver disappeared — NOT by the automated and not by any gate. Nothing in the re that an authored file actually became git. Coverage-escape audit: no surface this class at all. === SCOPED AND ME 2026-08-26 — RECOMMENDATION (b) IS DISPROVEN NOT MERELY DISFAVOR TASK 1a — TRACKED FILES SURVIVAL BEING TRACKED: 3, not 157. A raw s 2795 tracked paths hit 157 ignore rule of those are NEGATIONS (! lines), i.e. re-included and safe BY RULE. Report the blast radius would have been a §1 false positive; the investigating stream this itself. Two independent instrumen ignore -v filtered on non-negated patte bare check-ignore which emits only tr excluded paths) produced IDENTICAL frontend/e2e/credentials.spec.ts — .git credentials* — HAZARD (the known line Playwright spec) 2. tests/security test_jackett_autoconfig_secrets.py — .gitignore:51 secrets — HAZARD, NAMED IN THIS ITEM WHEN FILED Conductor-verified: matched by :51, c tracked. It is a 113-line SECURITY / PR asserting no credential value reaches body, traceback, or log. Losing it silen remove the test that guards §11.4.10 all glob's own purpose. That is the sh instance available: the rule protectin credentials is one refactor away from

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					the test that proves credentials are present in submodules/jackett — .gitignore:260 hazard: mode 160000 gitlink, and that is documented as deliberately inert for CodeGraph per §11.4.79). THE MECHANISM DECIDES THE FIX: the directory negates and re-includes the DIRECTORY ONLY. A new frontend/src/app/jackett/credentials/credentials.guard.ts is STILL swallowed because <i>credentials</i> contains no slash and is therefore BASENAME-scoped — the added directory buys nothing for new files. safe files, 124 are held by ONE robust negation (!docs/qa//.log) and 13 by file hand-maintained per-file entries (currently live, none stale — but expect future silent loss). TASK 1b — ALREADY SWALLOWED UNTRACKED FILES: ignored+untracked paths. Two are losses (the tracker-credentials experiment and the BOB-124 .txt evidence — file own item); set_password.py is recorded UNKNOWN: provenance and deliberate NOT called lost work; download-proxy/qbittorrent_creds.json is the POSITIVE CONTROL — shape-inspected keys (never values) as [password, username] genuinely credential-bearing, CORRUPT ignored. TASK 2 — MEASURED IN A TREE, 10 source paths x 15 secret paths baseline (full 316-line file) swallowed 0 (a) EXACTLY AS THIS ITEM WORKS swallows 0 leaks 3 (a) repaired to those 3 swallows 1 leaks 1 (b) deranged unchanged + loud gate swallows 0 (a) LEAKS download-proxy/qbittorrent_creds.json — A REAL CREDENTIAL FILE SITTING IN THE TODAY — because credentials.json match “creds”. It also leaks my_password and service_credentials. Repairing

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					<i>leaves service_credentials: an extended scoped deny cannot cover EXTENS secret files without collapsing back deny-all it was meant to replace. So this item worded it is DISPROVEN, disfavoured — and I wrote (a) first candidate list, which was wrong. V NEWLY ALLOWS INTO GIT: NOTHING set is EMPTY. No pattern changes, §11.4.10-vs-§11.4.201(1) proof obligation discharges trivially. No variant of make that argument. TASK 3 — THE tests/security/</i> <i>test_gitignore_swallow_is_loud.sh verified not swallowed BEFORE work joke this item is about). It asserts the acceptance DISJUNCTION (commit OR refuses loudly), so it is FIX-DIR AGNOSTIC and leaves the direction operator decision. The load-bearing assertion is A3: git status is BYTE-1 with and without the file — world (authored) 330ceb52074cdbbe, work made) 330ceb52074cdbbe. That is the null proven directly, not argued. P a tautology: RED_MODE=1 -> exit 0 stand-in -> exit 0; narrowed glob -> and the §1.1 mutation DELETING the exit 2 with 11 leaks caught, which makes the golden-FALSE load-bearing than decorative. Exit 2 is deliberate from exit 1 so a blind harness can it as “defect present”. BEYOND WH ITEM FRAMED: it is not a credential problem. secrets, _password* and *_ EACH already swallowed something *_user* is the broadest — it will match future *_user.txt / .json evidence or fix must be evaluated against the whole not the one glob that surfaced first. == LIVE TRAP HIT, SAME SESSION (2026</i>

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
174	critical	Fixed (→ Fixed.md)	Bug	—	The BOB-207 stream chose the natural tests/unit/test_ownership_user_ownership RED. Conductor-verified: that path SWALLOWED by .gitignore:60 _user. checked before writing (having been renamed to test_ownership_gid_agree which is clean. That is the SECOND de one session that the deny-all globs were silently eaten — the first (BOB-204's credentials_failclosed_test.go) was caught after the fact. It also confirms this item “beyond the item” warning empirically the broadest of the four globs and it whose name contains no secret and no credential — merely the word ‘user’ ‘user_owned’, which is the FEATURE NAME (spec 002-user-owned-downloaded test named after this feature is a canonical silent loss. Two hits in one session, from independent streams, is not a coincidence — it is the defect operating normally. BOB-213 — WHAT: the §11.4.252 fail-gate’s extension list omits shell entirely. Measured verbatim by the conductor constitution/scripts/gates/cm_dangerous_combination_fail_closed — exts=“\${DANGEROUS_COMBO_EXT cc cpp h hpp java cs js ts jsx tsx php r No bash. THE CONSEQUENCE, MEAS scripts/ IS a declared DANGER_ROOT pre_build_verification.sh:1511). It counted tracked .sh files and 3 .py files. So 71 files in a root the gate is explicitly possible SILENTLY INVISIBLE — while invariably driver prints "no fail-open anti-pattern first-party source root(s)". Project-wide 198 tracked .sh files (negative control instrument proven seeing). WHY THE WORST OF THE THREE HOLES: BOB-scope hole (root never looked at). BO

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					matcher hole (Go enumerated but unanalysable). THIS one is worse than the other because the root IS declared, IS scanned, counted as covered, and 96% of what was never examined. The count in the driver summary is an under-count presented as a census. AND SHELL IS THE HIGHEST LANGUAGE HERE, not the lowest: the orchestration, credential handling, control and gates are shell. start.sh and LOC and is, per CLAUDE.md, THE orchestration. Fail-open in shell is also unusually easy — a bare `cmd \\\  true`, an unchecked +eregion, a swallowed2>/dev/null- a §11.4.67(6) already records one line of exactly this class (a bare exec redirection silencing an interaction for its lifetime). CORRECTION TO PREVIOUSLY-STATED ACCEPTANCE CRITERIA (§11.4.6): I asserted, when filing that "the honest-blindness path (§ SKIP-with-reason, which the gate implements correctly for unenumerated extensions) is preserved". THAT IS the gate's honest SKIP-with-reason excluding PYTHON ARM's degradations, NOT for absent from the ext list. An unenumerated extension is a SILENT false-null, honest skip. The distinction is lost and I stated it backwards. NOTE ON NUMBERS: the BOB-205 stream cited in the ext list at :318; the conductor measurement at :457. Both are correct at their respective positions. A sibling stream (BOB-195 r7) is added while editing this file. Re-derive before ACCEPTANCE: (1) either shell is added to the ext list WITH an arm that can actually analyse it, or unenumerated extensions produce an explicit UNANALYSED version of the file — never a silent pass (this is the analyser-registry fix BOB-191 needed)

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					doing it once covers both); (2) the summary reports files ANALYSED, not present, so an under-count cannot be as a census; (3) a RED planting a open under scripts/ and asserting (4) golden-FALSE per §11.4.201(1) . correctly fail-CLOSED shell guard is flagged; §11.4.67's own brace-scope form is the natural fixture. COMP B0B-191 (matcher hole – same primitive classify by local shape, never con semantic role; and the analyser-re closes both) and B0B-205 (scope ho §11.4.250 these are three symptoms primitive defect; per §11.4.214 th three items because the fixes diff DISCOVERY CHANNEL (§11.4.238): fou B0B-205 verification stream, confi independently by the conductor. Beca FIRST-PARTY, §11.4.224(E) requires exclusion carry a tracked §11.4.19 and the two REAL defects found in tracked regardless of scope, since --update still executes them. Fixed (→ Fixed.md) Bug – B WHAT: cmd/boba-ctl/main.go:498-509 authMethod(). Its default branch (returns remote.AuthSSHKey. A deplo entry whose auth: key is misspelle or set to an unrecognised value th resolves SILENTLY to SSH-key authen rather than refusing to act. WHY §11.4.252 VIOLATION: this is a cre selection decision on a path that performs remote mutation and exter effects. §11.4.252 requires a path >=2 dangerous capabilities to FAIL

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					verify every precondition, refuse v unverifiable, and name the unresol precondition. Silently substitutin credential MECHANISM for an unread declaration is the textbook fail-o the operator's intent was not dete the code proceeded anyway using a may not have chosen. WHY NO GATE three independent reasons, each su its own – (a) cmd/boba-ctl is in n DANGER_ROOT (BOB-205); (b) even in files are structurally unanalysabl current gate (BOB-191); (c) this s semantic default-branch decision, the two text patterns the non-Pyth match. It was found by a human-equ read, which is precisely the §11.4 class. HONEST QUALIFICATION (§11. boba-ctl/main.go has NO_ = err, NO = nil {}, and NO silentreturn nil toda verified with a control needle aga qBitTorrent-go/internal/config/con This finding is the exception, not many; the scope hole around boba-c otherwise LATENT (it hides nothing it guarantees a future one lands u ACCEPTANCE: (1) an unrecognised/em value REFUSES with an error naming offending key and its declared val silently defaults; (2) a RED driv auth: and asserting today's silent resolution, flipping to refusal po golden-FALSE proving every LEGITIM value still resolves correctly – a refusal here would break real depl (§11.4.201(1)). DISCOVERY CHANNEL (§11.4.238): found by the BOB-205 verification stream while confirmi qualifies as a §11.4.252 surface. major Fixed (→ Fixed.md) Bug BOB-216 – WHAT: three carrier clas

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					the gate's PRIMARY mode, not only degraded text fallback. Measured a text_rc=1 (both modes report the h COMMENT or DOCSTRING quoting the c anti-pattern is reported as a LIVE default – both spellings; (b) a / or a string constant holdingtry { x{ }is reported as an empty catch, o carrier line. Shape (b), and the C half of shape (a), are LANGUAGE-AG GREPS with NO structural counterpa mode – so there is no parser to be WHY IT MATTERS: the gate's header blanket claim that "A parser is im both by construction". That is OVE now corrected in place, scoped to Try/With shapes where it is actual Everything else – every non-Python and the credential/empty-catch tex even on Python – has no AST arm at the immunity never applied there. §11.4.201(1) false refusal in the mode is materially worse than one fallback nobody expects to be exac refuses provably-healthy code on t gate is trusted on. THE CONTROL N SHARPENS IT (recorded so the next inherits the measurement): a #-COM import does NOT poison the licensi (text=0), because those regexes ar anchored. So the blindness is to S specifically, not to non-code gene distinction is what makes the comm fix tractable for one class and no others. WHY IT WAS NOT FIXED IN T THAT FOUND IT (§11.4.6 honest bound this is the right call): closing t a PER-LANGUAGE comment-and-string across every configured extension. model's failure direction is the U reporting one – a mis-parsed strin

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					silently swallows real violations remainder of the file. The same re made the round DECLINE the triple-counter for OVER-1 while ACCEPTING comment strip for OVER-A: the comm ambiguity resolves toward KEEPING (proven by three control needles – violation + comment, # inside a st escaped quote before # – all 1/1), fence counter's ambiguity resolves DROPPING text. Direction of failure difficulty, is the discriminator. full lexer here would import the u reporting failure mode this gate r everywhere else. OPERATOR DECISIO (§11.4.66 / §11.4.197): whether to language comment-and-string models consumer call, not a default this pick unilaterally. Options: (a) ac over-reports and DISCLOSE them per (what the round did – a new MODE-I CARRIERS section now enumerates al (b) build the models per language under-report risk with a fixture p language; (c) narrow the language-greps so they only fire where a st arm exists, trading coverage for p RELATION TO SIBLINGS (§11.4.214 di similar, deliberately not merged): the gate flagging a fail-CLOSED SS a semantic-role miss in the PYTHON is a CARRIER miss (comment/string code) that is MODE-INDEPENDENT. BO language absent from the ext list All three share the primitive §11. in BOB-191: classify by local synt shape, never consult semantic role fixes differ, so the items stay se ACCEPTANCE: (1) the operator decis is taken and recorded; (2) whichever chosen, each of the three classes

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					fixture proving current behaviour, future change cannot silently alter if (b) is chosen, a golden-FALSE proving a REAL violation adjacent carrier is still caught – the underguard, which is the whole risk. D CHANNEL (§11.4.238): found by the round-7 remediation stream while a different finding, NOT by the autonomous regime and NOT by the independent that audited the same file in round 178 critical Fixed (→ Fixed.md BOB-217 – WHAT: tools/plugin_update_automation.py update combines three §11.4.252 dangerous capabilities and is gated by nothing could stop a hostile payload: - U INPUT: 14 URLs across four GitHub repositories, THREE of which are PERSONAL repos, not the official organisation. - MUTATION: writes <name>.py. - DEFERRED CODE EXECUTION qBittorrent EXECUTES those engine bytes fetched over the network become code on the operator's host. The 0 validation is compile(content, "<s "exec") at tools/plugin_update_automation.py:213 – verified as the sole compile call. SYNTAX check. A syntactically valid exactly what a hostile payload is. NO signature verification, NO pinning SHA, NO hash allowlist, NO provenance of any kind. §11.4.252 requires a combining >=2 dangerous capabilities CLOSED – verify every precondition when any is unverifiable. This pattern THREE and verifies none of them. § supply-chain clause is the direct counterpart: dependencies are either hash-verified, provenance-attested

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					mirrored through a hash-pinning re unattested public source is an int risk, and here the unattested publ becomes EXECUTED CODE. THE SHARPE ABOUT THIS FINDING: the fail-close produced THREE FALSE POSITIVES in file (:189, :198, :215 – all triag POSITIVE, see BOB-214's correction MISSING this, the one genuine dang combination in it. That is the §11 both-directions failure – false-po false-negative – demonstrated insi file. It is the strongest availabl that the detector classifies by lo syntactic shape and never consults role (the §11.4.250 primitive name BOB-191/BOB-216). REACHABILITY, S HONESTLY (§11.4.6): the script is NOTHING – control-needle-proven (9 hits, 0 negative control) it is re only by its own README, its own do and a tracker note; zero hits acro *.yaml / *.py / Makefile outside to own README self-declares "not invo normal start/stop flow". Last func commit 2026-04-12. So this is NOT automated path. It IS reachable by --update, which is exactly what th exists for. Severity is Critical o capability combination, bounded by reachability – not on an active ex path. ACCEPTANCE: (1) plugin sour pinned (commit SHA or content hash verified before write; (2) an unve source REFUSES and names which che (§11.4.252) rather than proceeding syntax pass; (3) the compile() cal documented in-source as a syntax c is NOT a safety gate, so nobody re one; (4) a RED serving a syntactic hostile payload and asserting it i

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					pre-fix-absent / post-fix-present; golden-FALSE proving a legitimate update still succeeds (§11.4.201(1) DISCOVERY CHANNEL (§11.4.238): four concealed-hits triage stream while establishing that the gate's four this area were false positives. No automated QA regime – and the region pointed here reported the wrong thing 179 major Fixed (→ Fixed.m – BOB-218 – WHAT: tools/README.m "the backup is restored" on validation failure. Conductor-verified: shutting appears EXACTLY ONCE in tools/plugin_update_automation.py and control FORWARD only – a reverse-direction has ZERO occurrences (grep control proven seeing: needle 2 hits, negative control 0). The plugin write opens "w", which TRUNCATES IMMEDIATELY. OBSERVABLE HARM (the reason this is merely a doc defect): a failure passing through the write leaves a TRUNCATED IMPORTABLE plugin on disk. The operator told the update FAILED and reasonably concludes the previous file survived because the README says it was restored was not. The next ./install-plugin the corrupt file into config/qBittorrent nova3/engines/ and that search engine SILENTLY STOPS WORKING. The .bak name recover DOES exist on disk; the tool mentions it and never uses it. The §11.4 documentation-layer bluff with downstream consequence: the doc as safety property the code does not and the operator's recovery decision on that false assertion. SECOND, DIVERGENCE: the README claims JSON stdout; :274 writes it to a FILE (open(args.output, "w")). THIRD,

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					MINOR DEFECT in the same file (rec rather than as its own item because the file and the fix window): <code>_extract_version</code> at ~:198 uses a <code>BAREexcept:</code>, so a <code>Ctrl-C</code> during the sweep is <code>SWALLOWED</code>. That is a sign defect, not a fail-open – the gate this line, but for the wrong reason the silent default return; the real the bare except catching <code>KeyboardInterrupt</code> ACCEPTANCE: (1) either the rollback IMPLEMENTED (restore the <code>.bak</code> on failure the README claim is DELETED – the code must agree (§11.4.6); if implemented write to a temp file and rename at rather than truncating in place; (2) <code>stdout-vs-file</code> claim corrected; (3) except narrowed so <code>KeyboardInterrupt</code> propagates; (4) a RED that fails to mid-way and asserts the previous path intact (post-fix) / truncated (pre-REACHABILITY: same as the sibling hand-run only, not in any automated last functional commit 2026-04-12. Major on the harm shape, bounded by reachability. DISCOVERY CHANNEL (found by the concealed-hits triage Not by the automated QA regime. minor Fixed (→ Fixed.md) Bug BOB-220 – WHAT: <code>scripts/ownership_repair.sh:891-895</code> runs c intending to strip <code>setuid/setgid</code> b live: the <code>chmod RUNS</code> and <code>SUCCEEDS</code>, mode stays 2755. Root cause measured <code>chmod</code> with a 3-DIGIT symbolic-equivalent octal PRESERVES the <code>setgid</code> bit on DIRECTORIES; only a 4-digit form (an explicit <code>g-s</code> clears it. The commit :868-884 describes a strip that does occur for directories. EFFECT: be – the surviving <code>setgid</code> bit is not

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					harmful, and no defect is known to from it. This is filed as a §11.4 defect: an in-source comment asser behaviour the code does not perform matters because the next reader will it, and because a future security-strip written against the same patch silently fail the same way. RELAT BOB-207: the same stream measured repair a new file inherits gid 100 SETGID BIT STILL SET – the two factors compound. If BOB-207 is resolved by the repair (the recommended direct setgid survival becomes moot for that but the misleading comment remains ACCEPTANCE: (1) either the strip is (00755 or g-s) or the comment is correct state that directories retain setgid and comment must agree; (2) if made RED asserting mode 2755 -> 0755 on directory, since the current form no-ops; (3) golden-FALSE proving a that SHOULD keep its mode is not changed. DISCOVERY CHANNEL (§11.4 found by the BOB-207 stream while unrelated behaviour. Not by the au regime. 181 critical Fixed Fixed.md) Bug – BOB-221 – WH scripts/pre_build_verification.sh 30 (CM-BASH-UNIT-TESTS-EXECUTED) e suites by FILESYSTEM GLOB (:1196) fail() on any non-zero exit. It th RUNS untracked suites, and it has of a test that is SUPPOSED to fail MEASURED: tests/pre_build/ test_bob205_danger_roots_scope.sh correctly, because it is a RED tes BOB-205, an unfixed defect. Invari counts that as a gate failure. The T042 verdict is FAIL, and this is three blocking causes. THE STRUCT

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					PROBLEM: §11.4.115 and §11.4.224 R RED authored FIRST and OBSERVED TO before the fix exists. §11.4.135r RED to persist as the permanent re guard. So the discipline mandates failing tests exist in the tree be authoring and fixing – and the blo treats their existence as a defect the constitution correctly makes t refuse the commit. That is a §11.4 seam problem: the gate asserts "no fails" when the invariant it shoul "no suite fails UNEXPECTEDLY". WH SURFACED NOW: this session authore across parallel streams (BOB-204, BOB-207, BOB-212) – the first time discipline was applied at this vol Previously REDs were flipped GREEN same round, so the window never sp gate run. The defect is not new; t is. THE FORBIDDEN RESPONSES (§11. NOT delete the RED to make the gat NOT weaken invariant 30 to ignore do NOT mark the RED skipped withou reason. Each converts a real signa silence. FIX DIRECTION – this is quarantine mechanism, which the co already specifies and this project wired: a RED declares its expected status and its tracked item (a hea a naming convention, or a manifest invariant 30 reads that declaratio declared-RED failure is reported a (not a fail) while an UNDECLARED f still blocks. Crucially the declar EXPIRE or be tracked – §11.4.248 p quarantine with a stabilisation de precisely so "expected to fail" ca permanent cover. A RED whose item flip GREEN or the gate should FAIL stale declaration. ACCEPTANCE: (1

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					declared RED does not block; (2) a UNDECLARED failing suite still blo §11.4.201(1) guard – a fix that ig failures is strictly worse than th (3) a declared RED whose tracked i CLOSED blocks, so declarations can (4) a paired §1.1 mutation removin declaration-check makes the gate a undeclared failure -> gate FAILs. CHANNEL (§11.4.238): found by the readiness preflight, before the en rather than during it. Not by the QA regime – the regime IS the thin would have blocked. === CORRECTED – MY FIX DIRECTION IN THIS ITEM WA AND THE BLOCKER IS WIDER (§11.4.6) CORRECTION 1 – §11.4.248 IS NOT TH MECHANISM. I wrote "this is §11.4. quarantine mechanism, which the co already specifies and this project wired." That is half right and the matters. §11.4.248(A) QUARANTINE t FLAKY tests – its trigger is liter consecutive-run-different-verdict after-red", and its remedy is to M suite to tests/quarantine/ and run blocking suite WITHOUT it "so gree green". §11.4.248(B) PROTECTED-SPE plus a required-reviewer gate on M regression test; it never says a t fail. A RED is DETERMINISTIC and M BE RUN – §11.4.115(F) and §11.4.22 the RED verdict to be PRODUCED as evidence. Excluding it destroys th artifact the discipline mandates. I two would also let a genuinely fla hide behind a RED declaration and What §11.4.248 legitimately suppli what should be INHERITED rather th invented (§11.4.227), is the SHAPE list + a tracked item + a deadline

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					only-shrink ratchet. CORRECTION 2 A LANGUAGE-PARITY GAP, NOT A DESIGN Conductor-verified: the project AL this mechanism on the PYTHON side. pytest.mark.xfail(strict=True) is deliberately for OPEN defects at t scaling/test_scaling_envelope.py:9 (BOB-167, documented in tests/scal README.md:64) and tests/stress/ test_plugin_parsers_stress_chaos.p whose own comments carry the ratch discipline verbatim ("it stays vis xfailed in every report", "then re xfail"). So "declared expected-fai strict so an unexpected pass fails ALREADY accepted policy in one lan BASH side has no equivalent. That gap. CORRECTION 3 – BOB-221 IS NO SUFFICIENT TO UNBLOCK T042. A full replication of invariant 30 measur FAILED=4 SKIPPED=2: rc=124 300s test_compute_badges_carrier_match. HANG, not a RED. Blocks independen separately. rc=1 3s test_ownership_gid_agreement.sh BOB-207's RED (a SECOND in-glob RE item assumed one) rc=1 1s test_bob205_danger_roots_scope.sh BOB-205's RED rc=127 9s test_check_cm_lan_routes_authentic CONTAMINATED: a sibling stream was lan_route_auth_analyzer.py during the run (§11.4.119 – the surveying not own that resource and correctl to adjudicate). rc=127 is the §11. internal FAIL-bluff signature, not verdict either way. Returned to it stream. ALSO: BOB-204's and BOB-21 share tests/security/ test_gitignore_swallow_is_loud.sh, OUTSIDE invariant 30's glob and ex

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					NOTHING (BOB-222) – they do not bl and widening the glob would immedi another blocker. THE DESIGN, RECO two-place declaration + SSoT expir semantics. THREE independent facts before a failure is excused – (1) is listed in scripts/lib/expected_ file the PRODUCING streams do not the suite file itself carries# EXP RED:with the SAME id; (3) <ID> is docs/workable_items.db, FAIL-CLOSE unreadable store or unknown id (§1 Plus STRICT-XFAIL PARITY: a declar that PASSES blocks, which mechanic the ratchet to shrink in the same the fix. EXIT-CODE CONVENTION REJ MEASURED EVIDENCE – and I had flag promising. The non-{0,1} exit spac ALREADY CLAIMED IN THIS REPO FOR T MEANING: test_gitignore_swallow_is uses exit 2 = "INSTRUMENT BROKEN o LEAK – verdict void", and test_bob205_danger_roots_scope.sh = ABORT (instrument blind). Both w precisely so a blind harness can n read as a verdict. Overloading eit "expected red" would make a genuin INSTRUMENT INDISTINGUISHABLE FROM RED – the gate would swallow exact failure class those codes exist to It also fails acceptance (4) (an i carries no item id) and (3) (nothi check), and it puts the declaratio the PRODUCER, collapsing producer! (§11.4.240/§11.4.249). HONEST BOU THE DESIGN (§11.4.240): it achieve separation by LOCATION and MULTI-P AGREEMENT, not by true CAPABILITY, §11.4.240 prefers. There is no PR/ seam here to enforce capability – Hard Stop #1 removed all CI/PR gat

					CODEOWNERS half of §11.4.248(B) is STRUCTURALLY UNENFORCEABLE in this What the design buys is that silent failure requires a coherent three-visible in a diff, instead of one line. THE RED: tests/pre_build/test_bob221_expected_red_declarati extracts invariant 30's loop and i predicate VERBATIM FROM THE LIVE G CONTENT MARKER (never line number) them against a hermetic scratch PR – so the logic under test is the g text, not a paraphrase (§11.4.226 Measured RED: 3 of 5 properties un 1. P3 is asserted on the blocking merely on "it blocked" – today eve blocks, so a bare did-it-block che pass FOR THE WRONG REASON and keep the anti-rot half were never built flip proven with the BYTE-IDENTICA against a sandbox carrying the pat all five properties met. Four pair mutations each kill exactly ONE pr one-to-one, no cross-talk. THE PA lines, 4 hunks + one new file scri expected_red.sh,git apply –checkcle APPLIED. Operational note the land must not miss: the table names test_bob205_danger_roots_scope.sh test_ownership_gid_agreement.sh, b carries an# EXPECTED-RED:` marker (verified 0 in both) — without those t additions the gate blocks them with” but the file carries no matching mark is the fail-closed design working as in a bug. SEQUENCING RECOMMENDAT bounded variant of (i) — land the me declaring exactly BOB-205, BOB-207 a item’s own suite, add the two missing triage the rc=124 hang as its own iter the rc=127 to its owner, THEN run TO

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
182	major	Fixed (→ Fixed.md)	Bug	—	HONEST COST, STATED NOT HIDDEN modifies the blocking gate BEFORE the ever run clean, so the mechanism's fix exercise IS the T042 run. The circular unavoidable and IS this item (§11.4.1 whose precondition is produced by the gates): a clean T042 run is impossible RED exists, so “validate the gate before it” cannot be satisfied. Risk reduced as possible without running the gate (pro applicable patch, proven polarity flip biting mutations, P2 undeclared-failure block asserted and mutation-proven) eliminated. Against (ii) fix-the-four-d all four are Queued and genuinely de BOB-212's fix direction is an explicit unresolved §11.4.66 OPERATOR decision own test was deliberately written fix agnostic so as not to prejudge it — change means making that decision on the other behalf, plus four implementations are reviews, and it STILL leaves the hanging rc=127 blocking. RECURSION NOTE: the own RED is in-glob and failing, so it is blocker until the mechanism lands — point its already-present marker and clear it. The mechanism is its own fix BOB-222 — WHAT: scripts/pre_build_verification.sh:1196 enum suites with a glob covering EXACTLY directories: “\${PROJECT_ROOT}”/tests/test_*.sh · “\${PROJECT_ROOT}”/tests/pre_test.sh · “\${PROJECT_ROOT}”/tests/h test.sh tests/security/ is NOT among Conductor-verified verbatim. So tests test_gitignore_swallow_is_loud.sh — authored this session with a golden-F proving real secrets stay ignored — is by NOTHING. It is a guard that guards and its silence is indistinguishable from

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					THIS IS THE THIRD OCCURRENCE OF THIS DEFECT CLASS. The driver's OWN comment a records the history: the same defect c "existed for tests/pre_build/test_*.sh" fixed by adding that directory to the recurred one directory over (tests/ho the same way. Now tests/security. Eac new glob entry; none addressed why directory is invisible by default. §11.4 APPLIES DIRECTLY: three symptoms, primitive. The primitive is a hand-m enumeration that must be edited in l with the tree, whose failure mode is the identical shape as BOB-205's DANGER_ROOTS and BOB-212's .gitig allowlist — three separate hand-main in this repo, all three measured to ha missed something. Adding tests/secur glob would be the fourth instance of NOTE THE GATE ALREADY HAS THE INSTINCT at :1220: it fails when the g matches NOTHING ("the glob is blind guard catches a TOTALLY blind glob PARTIALLY blind one — the more co more dangerous case, because a part glob still reports a healthy count. FIX DIRECTION (§11.4.251 role-as-data-pa the suite set from the tree — every te test_*.sh — minus a DECLARED §11.4 exclusion fence with a justification p Then a new test directory cannot be and a deliberate exclusion is visible a reasoned. If a hand list is kept, the o guard is the same computation, so th derivation must be built either way. ACCEPTANCE: (1) tests/security suites (2) a NEWLY CREATED tests//test_x.sh up with no hand edit — that is the in stops the recurrence, and without it t the fourth patch; (3) a RED creating s directory and asserting it runs; (4) th

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
183	critical	Fixed (→ Fixed.md)	Bug	—	blind-glob guard is extended to catch blindness, not only total. DISCOVERY (§11.4.238): found by the T042 reading preflight. Not by the automated QA run and notably not by the two previous same class, neither of which asked what happened. BOB-224 — WHAT: a replication of in (same glob, same skip list, same BOBA_PREBUILD_NESTED=1, same time measured RAN=38 FAILED=4 SKIPPED the four failures is tests/unit/test_compute_badges_carrier_match. rc=124 after the FULL 300 seconds not fail, it HANGS. WHY IT IS FILED SEPARATELY AND URGENTLY: it blocks invariant 30, and therefore T042, INDEPENDENTLY of BOB-221. The as BOB-221 that landing an expected-RE mechanism unblocks T042 is FALSE and two of the four failures are REDs, one hang, one is contaminated. Landing the mechanism alone leaves T042 blocked suite. IT MUST NOT BE SILENCED BY DECLARATION. A hang is a §11.4.232 failure, not a verdict: a wedged op and progressing op both look like “not finished and marking it expected-to-fail would §11.4.201(6) false-null into permanent That is exactly the abuse the expected design property (2) exists to prevent, be triaged as its own defect. INVESTIGATION DIRECTION (§11.4.102 first, no guessing is the timeout(1) signature. Determining wedges — a consumer blocked on and producer write-end is the documented here (§11.4.201(12) records that a background watchdog spawned inside a \$(...) command substitution inherits the pipe write-end early disarm orphans its sleep grand

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
184	major	Fixed (→ Fixed.md)	Bug	—	substitution stalls for the FULL budget every verdict and exit code stays COB. That signature — full budget, correct matches rc=124 exactly and should be hypothesis tested, not the last. The countermeasure is documented: redi watchdog subshell fds away from the pipe, or have the probe write to a file assume that is the cause; it is the high hypothesis given the recorded precede ACCEPTANCE: (1) the wedge point is with captured evidence, not inferred suite completes deterministically well budget; (3) a RED reproducing the ha regression cannot silently re-wedge (based assertion, since the failure IS t duration); (4) NOT closed by a declar raising the timeout — raising the buo FILE DATE: the suite is dated 2026-08 hang predates this session. DISCOVER CHANNEL (§11.4.238): found by the E design stream while surveying invar more widely than its brief required – preflight had verified only 3 of 38 sui stated that boundary honestly, which prompted the wider survey. BOB-225 — WHAT, conductor-verified: .gitignore:266 ignores *.docx The §11.4.65 export pipeline GENERA twins — the workable-items export p Issues.docx / Fixed.docx / Issues_Sum Fixed_Summary.docx, and the doc ex produced docs/scripts/check_cm_lan_routes_authenticated. round 9. Every one of them is untrac construction: they exist on disk, git w see them, and no gate can notice bec absence is silent. WHY THIS IS THE E CLASS, NOT A DUPLICATE OF IT: BOB deny-all glob plus a hand-maintained

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					ALLOWLIST, where new files leak through gaps in the list. This is a deny-all glob allowlist at all for a file type the project MANDATES producing. The mechanism the false-null is identical — git status so the exporter appears to succeed and artifact appears to exist. It is filed separately §11.4.214 (distinct-but-similar), with BOB-219 as siblings. THE TENSION RESOLVE HONESTLY: §11.4.153 mandates FOUR-format export (HTML + PDF + ... its document class, and §11.4.65 governs twins generally. So the constitution requires producing an artifact the repository is configured to refuse. One of the two ... and the resolution is an operator decision (§11.4.66): (a) the .docx mandate appears and the glob must carve out generated twins; (b) .docx is deliberately untracked heavy binary derivative regenerable §11.4.77 from its .md, in which case the EXPORTERS should stop producing it produce it into an explicitly untracked and the §11.4.153 four-format requirement should be recorded as consciously not rather than silently unmet. What is not acceptable is the present state: generate ignore it, and let both the mandate and appear satisfied. MEASURED SCOPE (CORRECTED — my first write of this ‘tracked .docx files = 0’, which is FALSE recorded here per §11.4.6 rather than amended): 2 .docx files ARE tracked and exist repo-wide, so 1138 are untracked ignored. (A second correction, also recorded rather than amended: my first correction 344, which counted only the docs/ sub numeric errors in a row on one item pattern is that each was measured with narrower instrument than the claim supported, which is the §11.4.201(7)(

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					part-of-the-instrument failure applied to own reporting.) AND THE TWO SURVIVORS THE INTERESTING PART: they are done in Status.docx and docs/features/Status_Summary.docx — precisely the §11.4.153 explicitly mandates as a FOIA export. So the only two DOCX artifacts we see are the two a specific anchor name they survive not by rule but because they already in the index. That makes this condition, not a total one, and the two are the interesting part — they are in position as frontend/e2e/credentials. under BOB-212: alive only because they already in the index, since git honours over .gitignore for tracked paths. One and-re-add, one file move, and they v silently like any other. So the state is a clean ‘we never track docx’: it is an inconsistent one where two artifacts prove the format IS tracked while 34 not. ACCEPTANCE: (1) the operator does above is taken and recorded; (2) which the exporter and the ignore rule AGR if .docx is not tracked, nothing should generate one into a tracked doc directly carved out, a check that a generated actually trackable, so this cannot record (4) §11.4.153 compliance is either me recorded as an honest gap, never left failing. DISCOVERY CHANNEL (§11.4. by the BOB-102 round-9 remediation when it regenerated its own guide two noticed the .docx could not be added automated QA regime — and the reg see it, which is the point.
