BOB-082 — Closure Evidence

Date: 2026-09-25 **Status:** Completed (→ Fixed.md)

Item's actual scope (per its own NOTE, narrower than the title)

NOTE: BOB-064..067 have been created 2026-08-10 as Task/Queued (the four Lava P1..P4 items); the closed-as-Implemented status flip (citing per-finding implementing commits) remains owed under this item.

So the item's real remaining work is NOT item creation (already done 2026-08-10) — it is verifying/completing the closure of whichever of the four legs are actually finished, with evidence.

Verification of current state (2026-09-25)

```
$ sqlite3 docs/workable_items.db "SELECT atm_id, status, title
FROM items WHERE atm_id IN
('BOB-064','BOB-065','BOB-066','BOB-067');"
BOB-064|Completed (→ Fixed.md)|Lava P1: Durable remote execution
(systemd-linger helper)
BOB-065|Queued|Lava P2: Egress diagnosis and VPN-host SOCKS
routing (containers pkg/egress)
BOB-066|In progress|Lava P3: BOBA_UPSTREAM_PROXY in download-proxy
+ qBitTorrent-go + Jackett + compose env-forward
BOB-067|Completed (→ Fixed.md)|Lava P4: Jackett cookie-login
hardening + behaviorally-equivalent HelixQA fake
```

BOB-064 (P1) and BOB-067 (P4) are already closed with full, rich evidence (docs/Fixed.md) citing the exact implementing commits/files (scripts/lib/durable-run.sh, qBitTorrent-go/internal/jackett/client.go), regression challenges (challenges/scripts/

durable_run_helper_challenge.sh, challenges/scripts/
jackett_cookie_login_hardening_challenge.sh, challenges/scripts/
helixqa_jackett_fake_behavioral_equivalence_challenge.sh), §11.4.115
RED/GREEN polarity proofs, §1.1 paired-mutation rehearsals, and live
equivalence captures — both entries explicitly state “Closes RD2-15/
GA-05 (P1/P4 leg of the four Lava-porting items BOB-064..067)”.

Note on closure vocabulary: the item’s own text says “closed as
Implemented” — per §11.4.33’s closed-set mapping, Task-type items
close as Completed, not Implemented (Implemented is reserved for
Feature-type items). BOB-064/067 are Type=Task and correctly closed as
Completed (→ Fixed.md). The item’s loose wording does not indicate a
defect — the substance (evidence-cited closure) is satisfied.

BOB-065 (P2) and BOB-066 (P3) are genuinely NOT finished —
Queued and In progress respectively. This is NOT a gap in BOB-082’s
scope: BOB-082 asks to close legs that ARE done with evidence, not to
prematurely close unfinished work (doing so would itself be a §11.4
PASS-bluff). The remaining two legs are correctly tracked and
progressed under their own items (BOB-065, BOB-066), outside
BOB-082.

GA-05 finding re-verified as resolved

The item’s own reproduction step:

```
$ grep -in lava\|BOB-06[4-7] docs/Issues.md docs/Fixed.md
```

now returns many hits across both files (BOB-064/067 in Fixed.md with
full evidence; BOB-065/066 in Issues.md, actively tracked) — the zero-
hit state GA-05 originally measured (2026-08-08, before the items
existed) no longer holds.

Disposition

BOB-082’s literal scope — item creation (done 2026-08-10) + evidence-
cited closure of the finished legs (done, verified above) — is complete.
The two still-open legs are correctly out of scope for this item and
continue under BOB-065/BOB-066.

Classification

Project-specific (§11.4.17) — workable-item bookkeeping; no constitution change.
