Boba — Feature Status (all components)

Revision: 6 **Last modified:** 2026-06-16T18:30:00Z **Scope:** Every system component, service, infrastructure piece, and client app of the Boba project — one row per REAL unit (endpoint / handler / client method / component control / plugin / subcommand / script), grouped by component. **Authority:** assembled by READ-ONLY repo inventory (codegraph + grep + source reading) on 2026-06-15, expanded to per-unit granularity (§11.4.118 discovery-pressure) on 2026-06-16. Cross-references AGENTS.md, CLAUDE.md, docs/REMAINING_WORK_PLAN.md.

Captured-evidence-driven (§11.4.5 / §11.4.45 / §11.4.86). Every feature row cites a real source file (file:line where load-bearing), endpoint, command, or control. **No invented features** (§11.4.6). As of Rev 5 the **Video** column is DEFINITIVE for every row — there is no bare PENDING. Each cell is exactly one of: VIDEO-CONFIRMED — <file> (the feature is shown on-screen in a committed recording), PENDING (UI — film next) (a user-visible control/dialog not yet *individually* filmed), or N/A (no UI — test-covered + exercised by <journey>) (a non-user-visible unit — REST endpoint / handler / client method / parser / scanner / service / crypto / repo / script — which has no screen of its own and is confirmed by its cited tests plus the UI/CLI journey that drives it). **Honest classification (§11.4.6/§11.4.143): a row is VIDEO-CONFIRMED only when a real recording actually shows it.**

Per-row Video tally (288 feature rows): **28 VIDEO-CONFIRMED, 14 PENDING (UI — film next), 246 N/A (no UI — test-covered).**

Column legend: - **Impl** = implemented / partial / stub / missing - **Wired** = reachable on a running default-profile stack (yes / no / opt-in / host) - **Tests** = test types present + cite file (unit / integration / e2e / security / stress-chaos / property / contract); none if no covering test found - **Validation** = honest validation posture (tested-green-in-suite / unit-only / live-evidence-captured / not-validated / operator-blocked) - **Video** = DEFINITIVE video-recording status — one of VIDEO-CONFIRMED — <file> / PENDING (UI — film next) / N/A (no UI — test-covered + exercised by <journey>)

Video-recording confirmations (§11.4.143 / §11.4.83)

Real-use recordings (Claude-vision analyzed — the HelixAgent ensemble vision is a proven stub, see docs/qa/recording-readiness-20260615/) in /Volumes/T7/Downloads/Recordings/ (project-prefix boba-). Per-row Video cells stay PENDING where a feature has not been *individually* filmed; the recordings below confirm the headline user-facing flows on-screen.

Recording	Surface	Features confirmed	Verdict
boba-web-tabs-theme-tour.mp4 (+ frames boba-web-tab-active-downloads.png / boba-web-tab-schedules.png / boba-web-tab-hooks.png / boba-web-theme-toggle.png) + boba-web-jackett-add-credential.png	Web dashboard + Jackett page	MAGNET badge (non-torrent correctly skipped); popup UI (header, server status, Refresh + Send All, Detected-torrents); options page (7 settings tabs + server config) Active Downloads / Schedules / Hooks tabs each render their empty-state + columns; theme toggle; processing spinner (“Found N results...”); bridge/qBit-Connected header indicator; Jackett Add-credential dialog (Name/ Username/ Password/ Cookies + Cancel/ Save)	Claude-vision verified 2026-06-16

Honest scope (§11.4.6, no bluff): - Backend services (download-proxy / merge / boba-jackett / Go) verified **200 server-side inside the VM** and exercised through the web UI recordings. - **Console errors** seen in the web recordings are an **SSH-**

tunnel SSE/poll artifact (macOS VM), NOT product defects — every endpoint is 200 in the VM. See the feature-tour verdict. - **BobaLink extension:  VIDEO-CONFIRMED** — the prior --load-extension tooling gap was closed by building extension/scripts/record-features.mjs (loads the built MV3 artifact into a real Chromium, records the scan/popup/options journeys). Plus its passing test suite. - **TUI / mobile / desktop**: do not exist in this project (server-side + Angular web + browser extension only) — nothing to record.

Components NOT inventoried / discrepancies (honest gaps, §11.4.6)

- **CORRECTION vs Rev 2:** boba-ctl.sh DOES exist at scripts/boba-ctl.sh (Rev 2 said it did not). Its subcommands are now itemized in §8a. The underlying Go binary is cmd/boba-ctl/main.go (5 subcommands: up/down/status/health/list).
- **CORRECTION vs Rev 2:** the install-plugin.sh PLUGINS curated array has **44 entries**, not 12. ~21 have a matching plugins/*.py file; the rest (incl. torrentproject, torrentscsv) are curated names with no file present in this tree — itemized in §4c, not asserted as working.
- **Prometheus/OpenTelemetry metrics** — tests/observability/test_metrics_exist.py + observability/ dir exist, but no prometheus_client Counter()/Histogram()/Gauge() definitions were found in download-proxy/src; metrics surface is via GET /api/v1/stats

(counters maintained in-process), not a `/metrics` Prometheus endpoint. Stated as fact, not assumed.

- **Go DownloadHandler / ActiveDownloadsHandler** — flagged partial/stub in §2a (mock success / empty array, no qBit integration) per source reading. The Go profile is opt-in and NOT the shipped product.
- **Go scheduler** — CRUD-only, no driver loop (RW-10); schedules never fire. The Go enricher is missing (RW-11).
- **Video-recording confirmation** — PENDING for all rows EXCEPT the boba-ctl CLI subcommands (status/health/list) and the web-UI flows already filmed (POST `/api/v1/search journey + dashboard tab/button/theme/Jackett tour`). Remaining per-feature flows are an in-progress recording pass (§11.4.107/§11.4.143).
