

Fixed “ Closed Workable Items

Revision: 5 **Last modified:** 2026-06-06T19:20:00Z **Ticket prefix:** BOB (operator-mandated, 2026-06-06) **Scope:** Closed items only. Open items live in [Issues.md](#).

Closure statuses per Â§11.4.33: Bug “ Fixed, Feature “ Implemented, Task “ Completed. Each carries captured-evidence (anti-bluff Â§11.4).

Â§1. [BOB-001] start.sh BSD-sed incompatibility aborted the boot

Status: Fixed (“ Fixed.md) **Type:** Bug **Closed:** 2026-06-06 Â· **Commit:** c5cbd40

GNU sed -i SCRIPT calls (6 sites) aborted start.sh on macOS/BSD sed with “invalid command code”, before compose up “ the stack never started. Added a portable sed_inplace() (-i .bak then drop backup; works GNU+BSD) and converted all 6 sites (Â§11.4.67/Â§11.4.81). **Evidence:** tests/unit/test_sed_inplace_portable.sh “ 4 passed (RED before fix); boot #2 then progressed past the config step.

Â§2. [BOB-002] start.sh podman unshare incompatible with macOS remote podman

Status: Fixed (“ Fixed.md) **Type:** Bug **Closed:** 2026-06-06 Â· **Commit:** c5cbd40

podman unshare cp/chmod (rootless-Linux-only) aborted plugin install on the macOS remote podman client. Added _podman_unshare_works() self-detection; falls back to plain cp/chmod on macOS (Â§11.4.81). **Evidence:** boot #3 reached compose up and brought all 4 containers up.

Â§3. [BOB-003] macOS tunnel port detection broken (ports never forwarded)

Status: Fixed (“ Fixed.md) **Type:** Bug **Closed:** 2026-06-06 Â· **Commit:** c5cbd40

ensure-macos-tunnel.sh parsed the connection NAME, not the SSH port (“Bad port “podman-machine-default”), so container ports were never forwarded to macOS localhost. Now uses podman machine inspect {{.SSHConfig.Port}} with a URI-parse fallback. **Evidence:** tunnel established (port 51347); curl localhost 7186 “200, 7187 “200, 7189 “404, 9117 “301 after the fix.

Â§4. [BOB-004] Private-tracker credentials stored securely + verified working

Status: Completed (“ Fixed.md) **Type:** Task **Closed:** 2026-06-06

Stored RuTracker / IPTorrents / RuTor / NNMClub credentials in the gitignored .env (mode 0600). **§11.4.10.** A pre-store leak audit ran clean (no value in tree or git history). Credentials never committed and never logged. **Evidence:** - Security suite: test_credential_scrubbing + test_credential_file_safety + test_jackett_autoconfig_secrets + test_log_filter "22 passed, 1 skip. - Wiring: orchestrator reports rutracker + iptorrents creds-available=True. - **End-to-end live proof:** POST /api/v1/search/sync query ubuntu " IPTorrents status=success, results=49, auth=True with real result names (e.g. "Ubuntu Linux Toolbox 1000+ Commands"). RuTracker login attempted (auth=True, CAPTCHA-blocked " tracked as BOB-008).

§5. [BOB-013] torrentkitty _parse_size reported 0 for every KB/MB/GB/TB size

Status: Fixed ("Fixed.md) **Type:** Bug **Closed:** 2026-06-06 **Commit:** 14bc5c4

"B" substring-matched inside KB/MB/GB/TB so all realistic sizes parsed to 0. Fixed to match on the suffix, longest unit first. **Evidence:** tests/unit/test_plugin_search_engines.py " torrentkitty size tests assert correct byte values; 18 passed.

§7. [BOB-005] Public-tracker plugins all raised an unhandled exception (systemic)

Status: Fixed ("Fixed.md) **Type:** Bug **Severity:** High **Closed:** 2026-06-06

Every public-tracker plugin failed (status=error, "plugin raised an unhandled exception"); only IPTorrents (in-process) worked. Two stacked root causes, both reproduced deterministically via superpowers:systematic-debugging: 1. copy_plugins placed the nova3 framework modules (novaprinter.py, helpers.py) under engines/, but the merge-service harness imports them from the nova3 ROOT (sys.path=<nova3 root>; import novaprinter; plugins do from helpers import ...) " ModuleNotFoundError for every plugin. 2. helpers.py does a top-level import socks (PySocks), absent from the python-alpine download-proxy container " import failed even after #1. (The unit suite masked this via a conftest socks sys.modules stub.)

Fix: start.sh copy_plugins now also copies novaprinter.py+helpers.py to the nova3 root; download-proxy/requirements.txt adds PySocks>=1.7.1. **Evidence:** - Regression test tests/unit/merge_service/test_public_plugin_harness.py " 6 passed (incl. " negative control proving it catches the bug). - **Runtime proof (clean reboot, §11.4.108):** live search went from **49 results / 0 public trackers** " **909 results / 14 public trackers** (rutor 235, torrentdownload 243, linuxtracker 123, "). /tmp/boba_search2.json. Remaining per-plugin errors/timeouts tracked separately as BOB-015.

§8. [BOB-016] Jackett plugin crashed (Pool(0)) when zero indexers are configured

Status: Fixed ("Fixed.md) **Type:** Bug **Severity:** Medium **Closed:** 2026-06-06

plugins/community/jackett.py search() did with Pool(min(len(indexers), self.thread_count)). With no configured Jackett indexers, min(0, N)==0 and multiprocessing.dummy.Pool(0) raised ValueError: Number of processes must be at least 1" so EVERY Jackett search failed deterministically (the autoconfig had configured 0 indexers). Found via systematic-debugging determinism test (jackett errored in BOTH live runs while other trackers flapped). **Fix:** guard if not indexers: return before building the pool. **Evidence:** - tests/unit/test_jackett_plugin_pool.py " 2 passed (RED reproduced the exact ValueError before the fix; second test proves the pool path still fans out). - Runtime: in-container harness jackett().search('ubuntu', 'all') " was ValueError, now JACKETT_SEARCH_OK_NO_CRASH (returns gracefully).

§9. [BOB-006] NNMClub username/password login wired

Status: Implemented (" Fixed.md) **Type:** Feature **Closed:** 2026-06-06 " **Commit:** a94f269

NNMClub now uses the operator"s NNMCLUB_USERNAME/NNMCLUB_PASSWORD (in .env) " previously only NNMCLUB_COOKIES was consumed. search.py enables nnmclub on COOKIES OR (USER+PASS) and logs in (POST /forum/login.php, captures phpbb2mysql_4_sid) into the Fernet-encrypted _tracker_sessions; auth.py adds /nnmclub/status + /nnmclub/login. Credentials read from env, never logged. **Evidence:** 19 unit tests (RED-first; mocked login + cookie-shape asserts); ruff + mypy clean; frozen OpenAPI spec reconciled. Live nnm-club.me login is SKIP " host DNS-blocked (§11.4.3); mechanism unit-proven.

§10. [BOB-017] NNMClub plugin self-heal crashed on invalid ICON

Status: Fixed (" Fixed.md) **Type:** Bug **Closed:** 2026-06-06 " **Commit:** a94f269

Adding password to the plugin Config made _validate_json reject every legacy nnmclub.json, forcing __post_init__ "s self-heal, which crashed on base64.b64decode(ICON) (ICON invalid base64 " pre-existing latent). Caught by central full-suite verification (§11.4.125). Guarded the self-heal so a bad cosmetic icon can't abort import. **Evidence:** test_nnmclub_config_selfheal.py 2 passed (RED reproduced the exact binascii crash).

§11. [BOB-007] RuTor documented as public (no-auth)

Status: Completed (" Fixed.md) **Type:** Task **Closed:** 2026-06-06 " **Commit:** 2d80f03

RuTor is a public tracker with no login endpoint; RUTOR_USERNAME/PASSWORD are not consumed. Documented in CLAUDE.md + AGENTS.md so the unused .env creds are not mistaken for a wiring gap.

§12. [BOB-011] DOCX export support added

Status: Implemented (" Fixed.md) **Type:** Feature **Closed:** 2026-06-06 " **Commit:** 2d80f03

generate_markdown_exports.sh now emits .docx (pandoc) alongside HTML/PDF, same idempotency/scope. **Evidence:** test_docx_export.sh asserts a valid non-empty zip

(PK magic); CLAUDE/AGENTS regenerated with .docx siblings. Note: mass-generation of all docsâ€™.docx is on-demand (not bulk-committed).

Â§13. [BOB-018] Jackett server image updated to latest

Status: Completed (â†’ Fixed.md) **Type:** Task **Closed:** 2026-06-06

Pulled `lscr.io/linuxserver/jackett:latest` (server build 2026-06-06, digest `424d4692â€¦`). Confirmed (research) there is no Jackett git submodule; the `jackett.py` plugin is at parity with `qbittorrent/search-plugins v4.9` + our local improvements â€™ the image is the update vector. See `docs/research/jackett_update/README.md`.

Â§14. [BOB-019] Jackett added as a reference submodule (latest release)

Status: Completed (â†’ Fixed.md) **Type:** Task **Closed:** 2026-06-06

Per operator decision, `git@github.com:Jackett/Jackett.git` is added as a **reference-only** git submodule at `submodules/jackett` (latest release **v0.24.2027**, shallow). Runtime still uses the maintained `linuxserver` image; we do NOT build Jackett from source. Provides source awareness for inspecting / cherry-picking indexer definitions. SSH URL per Hard-Stop #2; placed under `submodules/` per Â§11.4.28(C).

Â§6. [BOB-014] Go generateID() collided under burst (UnixNano-only)

Status: Fixed (â†’ Fixed.md) **Type:** Bug **Closed:** 2026-06-06 Â· **Commit:** `d46ea57`

`time.Now().UnixNano()` is not unique under rapid `StartSearch` calls â†’ dropped searches + broke `MAX_CONCURRENT_SEARCHES`. Fixed with an atomic counter. **Evidence:** `TestGenerateID_UniqueUnderBurst` (10k IDs unique) + queue-full test via real `StartSearch`; `go test -race green`, deterministic.
