

check_cm_doc_revision_header_present

check_cm_doc_revision_header_present.sh

Revision: 1 **Last modified:** 2026-09-26T14:00:00Z

Overview

Gate CM-DOC-REVISION-HEADER-PRESENT (pre-build invariant 62, BOB-242). Enforces the §11.4.44 revision header on every script guide under docs/scripts/.

Why this exists

The constitution named this gate but only one unrelated ledger file was ever checked. BOB-223 registered it as gate debt; this is the implementation for the scope BOB-242 names. Wider §11.4.44 scope (other docs/ trees) is not claimed.

Rule

Within the first 15 lines of each guide:

```
**Revision:** <positive integer>  
**Last modified:** YYYY-MM-DDTHH:MM[:SS]Z
```

The timestamp must be ISO 8601 in UTC (a trailing Z); an offset such as +0300 is refused.

Usage

```
bash scripts/pre_build/check_cm_doc_revision_header_present.sh .
```

Exit codes

Code	Meaning
0	every guide has a valid header
1	at least one guide is missing a field or has a malformed one (each is named)
2	harness error: bad arguments, not a git repo, or zero guides enumerated

Adoption

Measured 2026-09-26: 1 of 45 guides failed (`tunnel-keepalive.md` used an offset timestamp). It was corrected in the same change, so the gate is a hard floor with no baseline.

Related scripts

- `tests/pre_build/test_check_cm_doc_revision_header_present.sh` — 12 arms.
- `scripts/pre_build/check_cm_script_docs_sync.sh` — the §11.4.18 guide-existence and freshness gate.

Last verified

2026-09-26 — real tree: OK: all 45 guides under `docs/scripts/` carry a §11.4.44 revision header (before these two guides were added); test suite 12 passed.
