Boba — Feature Status (all components)

Revision: 10 **Last modified:** 2026-08-21T00:00:00Z **Scope:** Every system component, service, infrastructure piece, and client app of the Boba project — one row per REAL unit (endpoint / handler / client method / component control / plugin / subcommand / script), grouped by component. **Authority:** assembled by READ-ONLY repo inventory (codegraph + grep + source reading) on 2026-06-15, expanded to per-unit granularity (§11.4.118 discovery-pressure) on 2026-06-16. Cross-references AGENTS.md, CLAUDE.md, docs/REMAINING_WORK_PLAN.md.

Rev 9 (2026-08-20, BOB-083 / GOVERNANCE_AUDIT_2026-08-08_ROUND2.md RD2-16) — staleness catch-up (§11.4.44/§11.4.45/§11.4.86): 161 commits landed between the Rev 8 pass (e6162f7, 2026-08-18) and this pass's HEAD (e0d60ab, 2026-08-20). Real `git log e6162f7..HEAD` evidence: the overwhelming majority are the BOB-126 forced-logout killpg(-1, SIGKILL) incident chain (root cause found + closed, new universal §11.4.263 anchor) plus surrounding test/gate/quality hardening (BOB-127..135) — process-safety and CI-discipline work, **not new product features**, so no new feature rows are warranted from that set (§11.4.6: verified by reading the commit log, not assumed). Two exceptions **were** feature-relevant and are corrected below with cited live evidence: **RW-06** (RuTracker ReDoS fix deployment) — CLOSED live 2026-08-19 (1c0389a, BOB-093); **RW-07** (nnmclub /auth/nnmclub/status SOURCE→ARTIFACT drift) — CLOSED live 2026-08-19 (7baef2b, BOB-092). Both rows below updated to PASS – LIVE with their real evidence paths. docs/REMAINING_WORK_PLAN.md itself was NOT edited (out of this task's owned-file scope — see the Status_Summary companion for the plain-language version of this note). Total features cataloged: **unchanged at 292** (no rows

added or removed this pass, only 2 existing rows' Validation cells corrected). Every other pre-existing row was left untouched — a full per-unit re-audit against the 161-commit delta was judged out of the bounded scope of this staleness-catch-up pass, per the same §11.4.6 option-B discipline Rev 8 used.

Rev 8 (2026-08-18, BOB-075) — staleness remediation

(§11.4.44 / §11.4.86 /

GOVERNANCE_AUDIT_2026-08-08_ROUND2.md RD2-08): the audit's staleness claim was CONFIRMED, not a false positive — a real content edit landed in ea86ce1 (2026-08-15, the docs_chain-engine row swap in §8d below) WITHOUT the Revision/Last-modified header being bumped, and 60 commits landed between the Rev 7 content commit (646b295, 2026-06-16) and this pass (64705eb, 2026-08-18) that were never reflected at row-granularity. This pass performed a TARGETED refresh (§11.4.6 option B — this document is narrative, “assembled by READ-ONLY repo inventory,” not mechanically derivable from a single source-of-truth table, so a full per-unit re-audit of all 289 pre-existing rows was judged out of the bounded scope of a staleness-fix task and is NOT claimed here): added 3 new rows to §8d for scripts that shipped since Rev 7 and were completely absent from this ledger — scripts/load-tracker-cookies.sh (tracker-cookies autoload, 619a5f6), scripts/boba-svc.sh (sudo-free systemd wrapper, 444d94e), scripts/commit-push-all.sh (§11.4.234 dedicated commit/push entrypoint, 08e870e) — each cited to its real source file + covering challenge. Total features cataloged: 289 → **292**. Every pre-existing row was left untouched (no content was invented to “look fresh”); the honest scope boundary of this pass is recorded under “Components NOT inventoried” below.

Rev 7 (2026-06-16) — live-PASS update for the search/auth fix

batch (HEAD 7e9cab5): the multi-word URL-encoding fix (da7d709, ~17 nova3 plugins), the new RUTRACKER_COOKIES injection (2fc29fc), NNMCLUB_COOKIES auth, /auth/status cookie reflection (9c2f8dc), the new GET /api/v1/healthz JSON endpoint (137d7ff), and §11.4.85 stress+chaos coverage for the multi-word fix (7e9cab5) were all PROVEN end-to-end on the live nezha stack — full-fleet the matrix = **2600 results / 23 contributing trackers / zero plugin_bad_query_encoding**, all four private trackers authenticate (rutracker 50, nnmclub 50, kinozal 50, iptorrents 49). Evidence: docs/qa/search-fix-verify-20260616/. kickass.py reclassified **Won't-fix structurally-impossible** (§11.4.112) per docs/research/kickass_403_20260616/. NOTE

(§11.4.6): no Go files were touched this session — the Go rows are unchanged (the pre-existing magnet_stress_chaos_test.go guard stands; no NEW Go query-encoding guard was added this session, so none is claimed here).

Captured-evidence-driven (§11.4.5 / §11.4.45 / §11.4.86). Every feature row cites a real source file (file:line where load-bearing), endpoint, command, or control. **No invented features** (§11.4.6). As of Rev 5 the **Video** column is DEFINITIVE for every row — there is no bare PENDING. Each cell is exactly one of: VIDEO-CONFIRMED – <file> (the feature is shown on-screen in a committed recording), PENDING (UI – film next) (a user-visible control/dialog not yet *individually* filmed), or N/A (no UI – test-covered + exercised by <journey>) (a non-user-visible unit — REST endpoint / handler / client method / parser / scanner / service / crypto / repo / script — which has no screen of its own and is confirmed by its cited tests plus the UI/CLI journey that drives it). **Honest classification (§11.4.6/§11.4.143): a row is VIDEO-CONFIRMED only when a real recording actually shows it.**

Per-row Video tally (291 feature rows — the pre-existing Rev ≤7 tally of 288 vs the stated “289” total was a 1-row pre-existing discrepancy not reconciled by this pass, §11.4.6 honest note; +3 for the Rev 8 §8d additions, all N/A/host-script): **28 VIDEO-CONFIRMED, 14 PENDING (UI — film next), 249 N/A (no UI — test-covered).**

Column legend: - **Impl** = implemented / partial / stub / missing - **Wired** = reachable on a running default-profile stack (yes / no / opt-in / host) - **Tests** = test types present + cite file (unit / integration / e2e / security / stress-chaos / property / contract); none if no covering test found - **Validation** = honest validation posture (tested-green-in-suite / unit-only / live-evidence-captured / not-validated / operator-blocked) - **Video** = DEFINITIVE video-recording status — one of VIDEO-CONFIRMED – <file> / PENDING (UI – film next) / N/A (no UI – test-covered + exercised by <journey>)

Video-recording confirmations (§11.4.143 / §11.4.83)

Real-use recordings (Claude-vision analyzed — the HelixAgent ensemble vision is a proven stub, see docs/qa/recording-readiness-20260615/) in /Volumes/T7/Downloads/Recordings/ (project-prefix boba-). Per-row Video cells stay PENDING where a feature has not been *individually* filmed; the recordings below confirm the headline user-facing flows on-screen.

Honest scope (§11.4.6, no bluff): - **Backend services** (download-proxy / merge / boba-jackett / Go) verified **200 server-side inside the VM** and exercised through the web UI recordings. - **Console errors** seen in the web recordings are an **SSH-tunnel SSE/poll artifact** (macOS↔VM), NOT product defects — every endpoint is 200 in the VM. See the feature-tour verdict. - **BobaLink extension:** **VIDEO-CONFIRMED** — the prior --load-extension tooling gap was closed by building extension/scripts/record-features.mjs (loads the built MV3 artifact into a real Chromium, records the scan/popup/options journeys). Plus its passing test suite. - **TUI / mobile / desktop:** do not exist in this project (server-side + Angular web + browser extension only) — nothing to record.

4. Tracker plugins (plugins/*.py)

Plugin contract: class with `url`, `name`, `supported_categories`, `search()`, `download_torrent()` — the *target* contract, not a description of every engine today (see CLAUDE.md § Plugin System for the measured exceptions). Installed into the container by `install-plugin.sh`. Three counts, each answering a different question:

- **43 search-plugin engines** named by the `PLUGINS=()` array — the canonical managed roster.
- **43 distinct engine modules** on disk across `plugins/`, `plugins/community/` and `plugins/webui_compatible/`; measured 2026-08-21, this is exactly the curated array.
- **35 *.py files** sit directly in `plugins/` — the engines plus support modules (`nova2`, `novaprinter`, `socks`, `helpers`, `env_loader`, `download_proxy`), which are NOT plugins. (Was 36 until 2026-09-01, when `theme_injector.py` was deleted with the themed-WebUI overlay.)

Corrected per BOB-149: the previous revision stated 44 and 27, said “3 support” while listing 7, and claimed “many curated names have NO matching file in this repo tree”. That last claim was FALSE — every one of the 43 curated names resolves to a file in this tree (verified by set comparison, control-needle proven §11.4.201(7)(b)). These counts are guarded by `scripts/pre_build/check_cm_plugin_count.sh`.

Crypto — AES-256-GCM token encrypt/decrypt (shared/crypto.ts)	implemented	yes	security crypto-tamper.test.ts, no-hardcoded-secret.test.ts	tested-green-in-suite	N/A (no UI — test covered crypto; exercise by extension Send token path)
Storage — namespaced	implemented	yes	vitest unit		N/A (no UI — test

Feature	Impl	Wired	Tests	Validation	Video
chrome.storage.local wrapper (shared/storage.ts)				tested-green-in-suite	covered storage wrapper
Constants — site selectors / rate-limit / retry config (shared/constants.ts)	implemented	yes	covered via scanner tests	tested-green-in-suite	N/A (no UI — test covered constant)
Errors — Network/Server/Storage error types (shared/errors.ts)	implemented	yes	vitest unit	tested-green-in-suite	N/A (no UI — test covered error types)
Events — TypedEventEmitter bus (shared/events.ts)	implemented	yes	vitest unit	tested-green-in-suite	N/A (no UI — test covered event bus)
Logger — namespaced, no-secret (shared/logger.ts)	implemented	yes	vitest unit	tested-green-in-suite	N/A (no UI — test covered logger)
Utils — debounce / TokenBucket rate limiter (shared/utils.ts)	implemented	yes	vitest unit	tested-green-in-suite	N/A (no UI — test covered utils/rate limiter)
Tab groups — batch grouped-tab torrents (tabgroups/index.ts)	implemented	yes	vitest unit (tab-group Challenge per ext Status)	tested-green-in-suite	N/A (no UI of its own — test-covered tab-group batching exercise by extension Send-All)

6f. i18n locales (extension/src/public/_locales/)

Feature	Impl	Wired	Tests	Validation	Video
Locale en (English)	implemented	yes	i18n tests/ i18n/locale- safety.test.ts	tested- green-in- suite	N/A (no UI of its own — i18n locale data; test- covered; surfaced inside extension popup/ options)
Locale de (German)	implemented	yes	i18n locale- safety.test.ts	tested- green-in- suite	N/A (no UI of its own — i18n locale data; test- covered; surfaced inside extension popup/ options)

6g. Live round-trip

Feature	Impl	Wired	Tests	Validation
Live download endpoint round-trip (tests/live/download-endpoint.live.test.ts)	implemented	yes (live-gated)	live download-endpoint.live.test.ts	partial — operator-gated live env

7. WebUI bridge (webui-bridge.py) — host process :7188

Bridges qBittorrent WebUI with private-tracker auth. NOT a container.

Feature	Impl	Wired	Tests	Validation
WebUI proxy + header rewrite (webui-bridge.py)	implemented	host	integration test_webui_bridge.py, test_bridge_header_rewrite.py; stress test_bridge_stress_chaos.py	tested-green-i suite

Feature	Impl	Wired	Tests	Validation
Private-tracker auth bridging (rutracker/kinozal/ nnmclub/ iptorrents)	implemented	host	integration test_webui_bridge.py	partial live-gat
Theme injection into bridged WebUI (plugins/ theme_injector.py)	implemented	host	integration test_bridge_theme_injection.py	tested- green-i suite
Bridge root liveness (/)	implemented	host	integration test_bridge_root_liveness.py	tested- green-i suite

8. Infrastructure / CLI / shell scripts

8a. boba-ctl CLI orchestrator (Go: cmd/boba-ctl/main.go + wrapper scripts/boba-ctl.sh)

Feature	Impl	Wired	Tests	Validation	Video
boba-ctl up — start stack	implemented	host	go cmd/boba-ctl/ projectroot_test.go	tested- green-in- suite	N/A (CLI - covered; by boba-c

Feature	Impl	Wired	Tests	Validation	Video

BOBA_MASTER_KEY auto-generation (first-boot) for encrypted boba.db	implemented	yes	go bootstrap/bootstrap_test.go	unit (go)

Components NOT inventoried / discrepancies (honest gaps, §11.4.6)

- **Rev 9 scope boundary (BOB-083, 2026-08-20):** this pass corrected 2 pre-existing rows (RW-06 rutracker ReDoS-deploy row §4b, RW-07 nnmclub-status row §1b) to PASS – LIVE with real evidence citations (1c0389a/BOB-093, 7baef2b/BOB-092), but did **NOT** re-audit the other ~290 pre-existing rows against the 161-commit delta since Rev 8 (2026-08-18) — same bounded-scope reasoning as Rev 8. Known-real, non-feature work that landed in that window and is intentionally NOT itemized as new rows here (process-safety/CI discipline, not a product feature): the BOB-126 killpg(-1, SIGKILL) forced-logout incident chain root-cause + fix (ad4b46a, new

universal §11.4.263 anchor) and its surrounding gate/test hardening (BOB-127..135, ~150 commits). A future pass MAY re-run the full inventory to close this gap properly; until then this document is accurate for what it explicitly claims and honestly incomplete for what it does not.

- **Rev 8 scope boundary (BOB-075, 2026-08-18):** this pass added 3 new rows for scripts that shipped with no prior row (§8d) and fixed the missing Rev/date bump for the ea86ce1 content edit, but did **NOT** re-audit the other ~289 pre-existing rows against the current tree — that would be a full re-run of the original READ-ONLY repo-inventory process (§11.4.118 discovery-pressure), out of scope for a bounded staleness fix. Known-real capabilities that shipped since Rev 7 and are **not yet itemized at row-granularity** here (tracked as an honest gap, not silently assumed covered): the systemd service topology (boba.target, boba-stack.service, boba-webui-bridge.service, 444d94e/bbc63ca), outbound egress-proxy routing for tracker fetches (BOBA_UPSTREAM_PROXY, b44a2e4/4e62eca/ be5062d), and the submodules/jackett version bump to v0.24.2406 (99a486e, BOB-076 — a dependency-version change, not a new feature row). A future pass MAY re-run the full inventory; until then this document is accurate for what it explicitly claims and honestly incomplete for what it does not.
- **CORRECTION vs Rev 2:** boba-ctl.sh DOES exist at scripts/boba-ctl.sh (Rev 2 said it did not). Its subcommands are now itemized in §8a. The underlying Go binary is cmd/boba-ctl/main.go (5 subcommands: up/down/status/health/list).
- **CORRECTION vs Rev 2:** the install-plugin.sh PLUGINS curated array has **44 entries**, not 12. ~21 have a matching plugins/*.py file; the rest (incl. torrentproject, torrentscsv) are curated names with no file present in this tree — itemized in §4c, not asserted as working.
- **Prometheus/OpenTelemetry metrics** — tests/observability/test_metrics_exist.py + observability/ dir exist, but no prometheus_client Counter()/Histogram()/Gauge() definitions were found in download-proxy/src; metrics surface is via GET /api/v1/stats (counters maintained in-process), not a /metrics Prometheus endpoint. Stated as fact, not assumed.
- **Go DownloadHandler / ActiveDownloadsHandler** — flagged partial/stub in §2a (mock success / empty array, no qBit integration) per source reading. The Go profile is opt-in and NOT the shipped product.
- **Go scheduler** — CRUD-only, no driver loop (RW-10); schedules never fire. The Go enricher is missing (RW-11).
- **Video-recording confirmation** — PENDING for all rows EXCEPT the boba-ctl CLI subcommands (status/health/list) and the web-UI flows

already filmed (POST /api/v1/search journey + dashboard tab/
button/theme/Jackett tour). Remaining per-feature flows are an in-
progress recording pass (§11.4.107/§11.4.143).
