

Boba “ Feature Status (all components)

Revision: 2 Last modified: 2026-06-16T07:35:00Z **Scope:** Every system component, service, infrastructure piece, and client app of the Boba project “ one row per feature, grouped by component. **Authority:** assembled by READ-ONLY repo inventory (codegraph + grep + source reading) on 2026-06-15. Cross-references AGENTS .md, CLAUDE .md, docs / REMAINING_WORK_PLAN .md.

Captured-evidence-driven (Â§11.4.5 / Â§11.4.45 / Â§11.4.86). Every feature row cites a real source file (file:line where load-bearing). **No invented features** (Â§11.4.6). The **Video-recording confirmation** column is PENDING for all rows EXCEPT the boba - c t l orchestrator row (VIDEO-CONFIRMED 2026-06-16 via Claude-vision frame analysis); remaining surfaces (web dashboard, Jinja dashboard, extension, per-feature flows) are an in-progress recording pass (Â§11.4.107/ Â§11.4.143).

Column legend: - **Impl** = implemented / partial / stub - **Wired** = reachable on a running default-profile stack (yes / no / opt-in / host) - **Tests** = test types present + cite file (unit / integration / e2e / security / stress-chaos / property / contract); none if no covering test found - **Validation** = honest validation posture (tested-green-in-suite / unit-only / live-evidence-captured / not-validated / operator-blocked) - **Video** = video-recording confirmation “ PENDING everywhere this revision

Video-recording confirmations (Â§11.4.143 / Â§11.4.83)

Real-use recordings (Claude-vision analyzed “ the HelixAgent ensemble vision is a proven stub, see docs/qa/recording-readiness-20260615/) in /Volumes/T7/ Downloads/Recordings/ (project-prefix boba-). Per-row Video cells stay PENDING where a feature has not been *individually* filmed; the recordings below confirm the headline user-facing flows on-screen.

		Schedules/Hooks), Jackett / jackett credentials page, theme	

Honest scope (Â§11.4.6, no bluff): - **Backend services** (download-proxy / merge / boba-jackett / Go) verified **200 server-side inside the VM** and exercised through the web UI recordings. - **Console errors** seen in the web recordings are an **SSH-tunnel SSE/poll artifact** (macOSâ†”i, ŽVM), NOT product defects â€” every endpoint is 200 in the VM. See the feature-tour verdict. - **BobaLink extension:** covered by **816 passing tests**; a real-use UI video needs a --load-extension browser the current MCP canâ€™t launch â€” documented tooling-limited follow-up (NOT faked). - **TUI / mobile / desktop:** do not exist in this project (server-side + Angular web + browser extension only) â€” nothing to record.

Components NOT inventoried / discrepancies (honest gaps, §11.4.6)

- `boba-ctl.sh` referenced in tooling but no file exists at repo root or `scripts/`; could not inventory its subcommands.
- `plugins/torrentproject.py` / `plugins/torrentscsv.py` named in the `install-plugin.sh` curated array but absent from the tree; marked not-implemented-in-repo above.
- **Prometheus/OpenTelemetry metrics** `tests/observability/test_metrics_exist.py` + `observability/` dir exist, but no `prometheus_client` Counter()/Histogram()/Gauge() definitions were found in `download-proxy/src`; metrics surface is via GET `/api/v1/stats` (counters maintained in-process), not a `/metrics` Prometheus endpoint. Stated as fact, not assumed.
- **Video-recording confirmation** PENDING for all rows EXCEPT boba-ctl (VIDEO-CONFIRMED 2026-06-16, recording boba-cli-orchestrator-

demo .mp4 + Claude-vision verdict). Remaining surfaces (web/Jinja dashboards, extension, per-feature flows) are an in-progress recording pass (Â§11.4.107/Â§11.4.143).
