

# Continue â€” Project Status Snapshot

**Revision:** 13 **Last modified:** 2026-06-10T00:00:00Z **Session:** 2026-06-10 (Session 9 â€” overnight autonomous stabilization) **Last commit:** 6230865 **Branch:** main **Working tree:** CLEAN (after the doc commit that carries this update)

Send continue to pick up exactly where we left off. This file is the single source of truth for session handoff (Â§12.10 / Â§11.4.131).

---

## CURRENT STATE â€” Session 9 (2026-06-10, overnight autonomous loop)

The unit suite is now **FULLY GREEN** and **DETERMINISTIC**.

| Metric                  | Value                                                                                                                   |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------|
| Unit tests              | <b>4121 passed, 0 failed</b> â€” pytest tests/unit/ --import-mode=importlib (5m24s)                                     |
| Determinism (Â§11.4.50) | top-level scope <b>3150 passed</b> identical across --randomly-seed 7/42/100/31337/12345                                |
| Commits this session    | 6e15a8d (crash guards + async/loop hangs), 6230865 (test-pollution + network timeouts) â€” both pushed to all upstreams |
| Code review             | GO (zero findings/warnings) after Â§11.4.134 iterate-until-GO                                                           |

## What landed (Session 9)

- **8 product fixes** (6e15a8d): degenerate-input crash guards for tokyotoshokan/kickass/yts/piratebay; enricher full-suite-hang fix (aiohttp.ClientTimeout ~6); kickass/bitsearch/torrentgalaxy unbounded-loop caps (MAX\_PAGES=50); mutation-scanner .venv scope fix; +7 download\_proxy tests. Closed **BOB-060**.
- **Test-suite stabilization** (6230865): eliminated all Â§11.4.50 order-dependent pollution â€” tests/conftest.py \_CORRECT\_MS\_PATH repo-root fix (the dominant bug: corrupted merge\_service.\_\_path\_\_ â†’ broke 11 tests incl.Â all scheduler\_api), extended \_POLLUTING\_ROOTS, + per-test socket.socket & os.environ snapshot/restore. Network-I/O timeout hardening (search.py/routes.py/helpers.py/eztv.py). Closed **BOB-061**, **BOB-062**.

## Open queue (Issues.md)

- **BOB-008** â€” RuTracker CAPTCHA â€” **OPERATOR-BLOCKED**: needs you to complete the CAPTCHA at /api/v1/auth/rutracker/captcha + /login, OR paste a fresh bb\_session cookie via /auth/rutracker/cookie-login. Cannot be solved autonomously.

- Everything else closed (DBâ€™i,ŽMD in sync, 62 items, bin/workable-items validate OK).

## How to run the suite (both work now)

- Monolithic: `.venv/bin/python -m pytest tests/unit/ -q --import-mode=importlib` â†’ 4121 passed.
- Per-scope (faster, parallelizable): `tests/unit/merge_service/` (801) Â· `tests/unit/api_layer/` (170) Â· `tests/unit/*.py` top-level (3150).
- Always pass `--import-mode=importlib` (the `merge_service.deduplicator` lazy import needs it; a bare per-file run errors).

## Known low-priority follow-up (NOT blocking â€” suite is green)

- A residual `test_credential_env_wiring / env_loader sys.modules` stub ordering quirk surfaces only in narrow isolated file-combos; it does NOT manifest in the full top-level scope (5 seeds green) because the new `env/sys.modules` isolation covers it there. Tighten the `env_loader` stub teardown if it ever resurfaces.

## Session 8 Summary

| Metric             | Value                                                                      |
|--------------------|----------------------------------------------------------------------------|
| Test files         | 47 test modules (222 <code>test_*.py</code> files total across all suites) |
| Test cases         | 4,074+ passed                                                              |
| Coverage (unit)    | 88%+ (gate: 49%)                                                           |
| Bugs fixed         | 21 (BOB-001 through BOB-025, minus BOB-008)                                |
| Submodules aligned | constitution, challenges, containers, helixqa, jactett                     |
| Ruff / Mypy        | pre-existing warnings only, 0 new                                          |

## Bug Tracker

21 bugs fixed across Session 8: - 10 B-substring parsing fixes - 3 `import re` missing fixes - 2 comma-size parsing fixes - 2 crash guards - 1 bt4g hang fix - 1 dedup circular import fix - 1 `env_loader` flaky test fix - 1 pirateiro full test suite (44/44)

**1 remaining:** BOB-008 (RuTracker CAPTCHA) â€” operator-blocked, needs manual cookie paste.

| <b>TOTAL (unit)</b>   | <b>88%+</b> |

## Known Issues

1. **BOB-008:** RuTracker CAPTCHA â€” operator-blocked (needs manual cookie paste)
2. Go backend is a skeleton (documented in AGENTS.md)
3. Containers may be down on session start â€” bash start.sh first

4. macOS + podman network\_mode: host does NOT forward ports â€” ensure-macos-tunnel.sh handles this

---

## Quick-Start

```
# Pre-build gate
bash scripts/pre_build_verification.sh

# Unit tests
python3 -m pytest tests/unit/ -q --import-mode=importlib

# Coverage
python3 -m pytest tests/unit/ --cov=download-proxy/src --cov=plugins --cov=

# Lint + typecheck
ruff check . && mypy download-proxy/src/

# Frontend
cd frontend && npx vitest run

# Containers
bash start.sh && bash stop.sh
```

---

## Architecture

| Port | Service              | Tech                          |
