

zero_shortcomings_audit

scripts/

zero_shortcomings_audit.sh

Purpose: Unified enumeration, closure-evidence re-verification, and standing-check entry point across this project's three tracked "unfinished/gap/shortcoming" surfaces. See specs/003-zero-shortcomings-audit/contracts/cli.md for the full CLI contract.

Usage: scripts/zero_shortcomings_audit.sh <enumerate|verify-closure|standing-check> [options]

Inputs: docs/workable_items.db (read-only), constitution/scripts/gates/ (read-only, via cm_gate_ledger_ratchet.sh), docs/QA_DISCOVERY_LEDGER.md (read-only).

Outputs: A human-readable or --json report; standing-check additionally appends one line to docs/qa/zero_shortcomings_audit/<run-id>.log.

Side-effects: None in enumerate or standing-check mode. verify-closure --reopen-on-mismatch may call the workable-items CLI to reopen an item.

Dependencies: sqlite3, constitution/scripts/workable-items/workable-items, constitution/scripts/gates/cm_gate_ledger_ratchet.sh.

Cross-references: specs/003-zero-shortcomings-audit/{spec,plan,research,data-model}.md.
