126	High	Fixed (→ Fixed.md)	Bug	—	BOB-158 — tests/conftest.py cannot r production interpreter: binds asyncio.events._get_event_loop_polic private API, while production is 3.12.
					BOB-160 — Reported-Via: §11.4.202 directive task on 2026-08-21T19:02:4 Reported-By: AI What (the report, v Independent §11.4.209 review (IMPO found two of the feature’s strongest a checks were never executed by any r tests/ownership/ test_container_writes_owned_files.py §11.4.115 RED-turned-regression-gua FR-011/FR-007, proven via a docker- compose.yml revert mutation — was of tests/integration/ (commit 58d340a an autouse fixture hang) but no runn test.sh, run-all-tests.sh) was ever exte cover tests/ownership/. (2) tests/pre_b test.sh, the §1.1 paired-mutation met the scripts/pre_build/check_cm_.sh ga was executed by NOTHING — self-rep honestly in commit 04742d7’s own m (‘STILL OPEN (reported, not fixed): te pre_build/ is executed by NOTHING’) tracked as a workable item (a §11.4.1 requirements gap) and never wired i pre_build_verification.sh invariant 3 globbed only tests/unit/test_.sh. Affec file-scope manifest: ci.sh; scripts/ pre_build_verification.sh invariant 30 UNIT-TESTS-EXECUTED) Reproducti context: grep -rn test_container_writes_owned_files ci.s
127	Medium	Completed (→ Fixed.md)	Task	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
128	High	Fixed (→ Fixed.md)	Task	—	<i>run-all-tests.sh scripts/ returned zero (only docs/specs mentioned the path); scripts/pre_build_verification.sh shows 30's for-loop globbing only tests/unit/never tests/pre_build/test_.sh. Acceptance criteria: ci.sh gains a runtime-gated ownership/ stage (skips honestly, rc=0 podman/docker present); scripts/pre_build_verification.sh invariant 30 covers both tests/unit/test_.sh and tests/pre_build/test_*.sh, verified by an external standalone run of the invariant's example reporting a non-zero RAN count that files from both directories.</i> BOB-161 — Reported-Via: §11.4.202 directive task on 2026-08-21T19:31:10. Reported-By: BOB-092 remediation, finding What (the report, verbatim) names CM-NO-FAIL-OPEN-SKIP as one mandatory pre-build gates: it audits probe helpers and FAILs if any code probe converts an empty or unreachable result a PASS-counting SKIP for a feature class sink-side probe. This project does not Why this matters now rather than in abstract: the BOB-092 remediation just TWO fail-opens of exactly this class found e2e/test_live_stack_evidence.py — the SKIP-on-404 (already removed at 7ba surviving sibling at test_iporrents_is_authenticated_in_s skipped on 'not authenticated and successful' while asserting 'treating as timeout outage'. That assertion was false for credentials (upstream_http_403) and broken container (plugin_env_missing) which are definitive product failures product already classifies via error_type fail-opens of one class, found one at the §11.4.146 extend-to-all-cases sign

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					§11.4.238 coverage-escape signal together with the regime did not surface either, an age-old code did. The remediation's own guard was structural and lethal under three distinct mutations, but they LIVE IN THE FILE GUARD, so deleting that file evades the gate entirely. A pre-build gate is the durable because it audits the corpus rather than the Honest boundary (§11.4.6): this item claims the two remediated fail-opens are unguarded — they are guarded, with evidence (13 passed in 97.36s against the stack). It claims the CLASS has no code detector, so the next instance in a different invisible again. Affected scope / file-manifest: scripts/pre_build/ (gate about e2e/test_live_stack_evidence.py (guarding currently live inside the file they guard). Reproduction / context: grep -rl 'CM-OWN-OPEN-SKIP' scripts/ tests/ returns exactly one hit, and it is tests/e2e/test_live_stack_evidence.py — the file the guards live in, not a guard needle: the same query for CM-OWN-INVARIANTS (a gate that does exist) returns no files, so the instrument can see gate to the single hit is a real absence, not a hit (§11.4.201(7)(b)). Acceptance criteria: pre_build/ gate named CM-NO-FAIL-CHECK exists, is wired into scripts/pre_build_verification.sh, and audits probe helpers for code paths converting empty/unreachable/error response into counting SKIP for a feature class that is a sink-side probe. It ships a golden-TRUE real fail-open -> gate FIRES) and a go-with-carrier (an honest topology/geometric comment merely MENTIONING the probe gate MUST NOT fire), per §11.4.107(1) and §11.4.201(1). Paired §1.1 mutation management gate FAIL before the gate is trusted.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
129	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-163 — OPERATOR DECISION (2026-08-21T19:41:08Z §11.4.66 interactive clarification): YES, YES IS RESPONSIVE IF Retry-After IS WELL-FORMED A 429 carrying a VALID Retry-After header counts as the sibling endpoint being RESPONSIVE. Assertion (c) of the DDG script accepts 2xx OR a well-formed 429 (positive integer seconds or valid HTTP-date — not merely present/non-empty). DEGREE remains: connection failure, timeout, and a 429 with absent or malformed Retry-After. RESIDUAL RISK, accepted knowingly stated in the script source per §11.4.66 genuinely wedged endpoint that happens to answer 429-with-Retry-After would pass the Retry-After parse narrows that window to not close it. Options (b) limiter-awareness (c) exempt healthz probe were both chosen. NOT chosen. STILL OPEN, not covered by decision: the detector counts 429 only as though the script header says ‘429 (or equivalent)’; counting 503 would collapse the crash detector’s 5xx tally. Decide BOB-111 lands limiters on :7185 and answer is recorded as consumer DATA §11.4.35 — it is the operator’s stated choice, an agent inference, and supersedes a previously agent-chosen default on this question. Options not chosen are named above so a future decision does not re-litigate a settled call (§11.4.35 bounded-verdict discipline applied to this — prior item text follows — Reported-By: 2026-08-21T19:41:08Z Reported-By: 2026-08-21T19:41:08Z remediation, pre-existing defect surfaced by BOB-111 landing a real limiter What was reported, verbatim): PRE-EXISTING, NOT INTRODUCED – and proven so rather than asserted: git diff shows assertion (c) is IDENTICAL to HEAD, and the failure was against the unmodified HEAD script.

					changed is not the challenge but the BOB-111 appears at least partially degraded because :7187 now returns real 429s previously returned none. :7185 and produce zero 429s. This is a 11.4.248-corrosion risk and that is why it is filed than left as a footnote: run_all_challenges now fail INTERMITTENTLY, and an increased trains everyone to re-run until green which point a real regression is dismissed ‘probably the flaky rate-limit one’. THE DECISION, which is an operator call 11.4.66 and which I deliberately did not. Does a 429 from a WORKING limiter prove the sibling endpoint being RESPONSIVE – a 429 proves the endpoint is alive and correctly protecting itself. Assertion (a) 2xx OR 429, and only a connection failure timeout counts as degraded. Risk: a green wedged endpoint that happens to answer would pass. (b) NO – keep requiring 2xx make the challenge limiter-aware: drift out the window before the sibling probe after is served, so the budget is known than guessed). (c) Probe siblings on a limiter exempts (a healthz-class route isolation question is asked without spilling bucket. Recommendation with reason: just a pick: (a) composed with a bounded liveness check – a 429 carrying a well-timed Retry-After IS evidence of a live, correctly behaving service, and (b) makes the challenge slower and couples it to a window value will drift. But the semantics of ‘responsive’ are a product judgement, so the answer is recorded, not assumed. RELATED, state rather than folded in: the detector counts only, not 503, though the script header (or equivalent)’. Counting 503 would be the crash detector’s 5xx tally. Worth noting when BOB-111 lands limiters on :718

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					Affected scope / file-scope manifest: challenges/scripts/ddos_resilience_challenge/assertion (c) cross-endpoint isolation run_all_challenges.sh which invokes Reproduction / context: Assertion (c) sibling-endpoint probe to answer ^2 :7187 now enforces a real limiter (measured live: x-ratelimit-limit: 120, x-ratelimit-limit: 86, retry-after: 45, server: uvicorn). A challenge run sends roughly 250 requests :7187, so sibling probes fired during the endpoints' tiers land on an exhausted tier and receive 429 – which assertion (c) catches as 'endpoint degraded'. Timing-dependent: measured PASS=5 FAIL=2; the UNMOVED HEAD script against the same live state later measured PASS=7 FAIL=0 SKIP=0 Acceptance criteria: The operator has answered the classification question and the answer is recorded as consumer DATA. Assertion (c) implements it. The challenge produces the same verdict across 3 challenge runs against a rate-limited stack (11.4.238 deterministic consistency), and the fix paired 1.1 mutation proving assertion (c) catches a genuinely degraded sibling endpoint, narrowing it must not blind it (11.4.238 BOB-164 — Reported-Via: §11.4.202 directive bug on 2026-08-21T19:56:53Z) By: BOB-110 UX-class coverage, discovered the new axe-core suite on its first live run (the report, verbatim): This is a REAL facing defect, not a test-tuning artifact. It was found by the automated regime, not by a human squinting at the page – was exactly the 11.4.238 posture the project was for. The static-grep oracle would NOT find it. Measured: the served root state is empty pre-hydration, so any check re-rendering raw HTML audits a page nobody sees
130	Medium	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					violation only exists in the hydrated DOM. This is why 11.4.170 requires a rendered component to not forbid value-equality assertions as the test UI is correct. Severity reasoning, status is more than assumed: this is user-visible and a primary dashboard heading, but it does not affect legibility rather than breaking functionality. The surface is operator-facing rather than user-facing. Medium, not High. The failing test was marked FAILING on purpose (11.4.238) instead of being silenced or marked xfail. tests/ux/ current reports 1 failed, 16 passed; that 1 is the failure. Anyone reading a red UX suite should not see this item, not as flakiness – and when it is fixed the suite goes fully green, which is a good signal that it is closed. HONEST SCOPE (11.4.6): only the dashboard landing page was scanned. The /jackett/* sub-routes and the serve-hosted :4200 route set were NOT scanned. The commands to close both are recorded in docs/testing/ux_accessibility.md. So the failure nodes are a floor, not a total. Affected file-scope manifest: the Angular dashboard is served at http://localhost:7187/ (same as the SPA as frontend); production component tests do not test files Reproduction / context: tests/ux/test_live_dashboard_accessibility.js. This is the running merge service. axe-core reports scanning a real Playwright-rendered DOM, reports color-contrast violations against 10 nodes. Measured pairs: .brand / h1 text on background #3c3f41 = 1.43-1.62:1 (large-text floor is 3:1); tagline #808080 / #3c3f41 = 2.68:1 (body-text floor is 4.5:1). Acceptance criteria: axe-core reports color-contrast violations against the live rendered dashboard, with the fix made to the production component CSS rather than relaxing the assertion or excluding the test (11.4.120: reconcile to the correct measurement and never weaken the check). The existing

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
131	High	Fixed (→ Fixed.md)	Bug	—	suite is the guard and already fails to RED is captured – closure requires it GREEN against the live surface, which runtime-class evidence per 11.4.226. BOB-165 — Reported-Via: §11.4.202 directive bug on 2026-08-21T20:00:08. By: surfaced while capturing closure for BOB-092; diagnosed rather than v around What (the report, verbatim STALE-ABI-AFTER-INTERPRETER-UP defect, not a missing package. The pa installed; its compiled half is built for previous interpreter. That distinction because ‘pip install rpds-py’ style adv appear to succeed while leaving the 3 in place. WHY IT WAS NOT NOTICED stated as fact: the paths that DO work system python3. ci.sh selects an inter through _select_python; the long-run in this session ran .venv/bin/python - and passed. So the automated regime while the DOCUMENTED operator co broken – an 11.4.238-shaped gap, sin escape was found by an agent captur evidence rather than by the regime. WORKAROUND (measured, not theor PYTEST_DISABLE_PLUGIN_AUTOLOA the needed plugins passed explicitly pytest_timeout ...) avoids the schema autoload that drags in jsonschema -> referencing -> rpds. That is a workar the fix: it silences the import path rat repairing the install, and it will surpr person who runs the documented co verbatim. RELATED, and worth decid together rather than twice: BOB-154 rebuilt on 3.12 to match the containe runs CPython 3.12.13 while both syst venv run 3.14.6). There are therefore interpreters in play. Whoever rebuild

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					should confirm rpds resolves for the interpreter afterwards, or this same reappears one directory over. HONEST BOUNDARY (11.4.6): this item does NOT any test is wrong or any product code. The product and the venv-run suites unaffected. What is broken is the doc entry point. Affected scope / file-scope manifest: host user site-packages (~/.python3/site-packages/rpds/); every C documented ‘python3 -m pytest ...’ in any tooling that uses system python3 than .venv/bin/python Reproduction python3 -m pytest tests/e2e/test_live_stack_evidence.py -q –importmode=importlib -> ModuleNotFoundError: module named ‘rpds.rpds’, raised during collection via the schemathesis plugin -> jsonschema -> referencing._core -> MEASURED root cause: system python3 but ~/.local/lib/python3/site-packages/rpds.cpython-313-x86_64-linux-gnu.so extension built for 3.13. rpds/init.py ‘from .rpds import *’, and a 313-tagged importable by 3.14, so the submodule does not exist for this interpreter. The CORRECT and unaffected: .venv/lib64/site-packages/rpds/ ships rpds.cpython313-x86_64-linux-gnu.so and ‘.venv/bin/python3 -m pytest tests/unit/ -v –importmode=importlib – the command CLARIFICATION documents – reaches collection with ModuleNotFoundError, OR CLAUDE.rpds corrected to document the supported explicitly. Either way the documented and the working command agree (11.4.6 guide that misleads is the documentation equivalent of a PASS-bluff). WORKAROUND EFFECTS MEASURED 2026-08-21 — the item not free, and the item previously imported

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
132	High		Bug	—	PYTEST_DISABLE_PLUGIN_AUTOLOAD disables ALL plugin autoloading, not just the broken one, so anything the suite silences on must be re-enabled by hand: - It breaks pre-existing env-dependent tests in test_plugin_rutacker.py — TestConfig::test_default_mirrors, test_env_mirrors_override, test_get_env_with_default, test_get_mirrors_from_env_empty, test_get_mirrors_from_env_whitespaces need an autoloading env plugin. PROBLEM caused by any in-flight change: running OWN copy of that file under identical conditions produces the same 5 failures. - It makes -timeout=60 (set in pyproject.toml) a UNKNOWN ARGUMENT unless -p pytest is passed explicitly, so pytest.mark.timeout is silently inert under the naive recipe. - A test believed to be time-bounded is not. - autoloading ON and only schemathesis (no:schemathesis), that same file is 96% CONSEQUENCE FOR ANYONE USING WORKAROUND: -p no:schemathesis is strictly better than blanket autoloading where it suffices, because it removes the broken plugin. Where the blanket fails -p pytest_timeout must be added or the test is inert, and the 5 env-dependent failures are recognised as workaround artifacts not filed as defects. That last point is the problem: the workaround manufactures failures exactly like product defects. This does not change the root cause (the venv's rpython-313 ABI tag CPython 3.14 cannot import) or the fix (rebuild the venv — It documents that the interim recipe is within radius, so nobody reads a workaround as a regression.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
		Fixed (→ Fixed.md)			BOB-166 — WHAT. §11.4.19 requires migration to be ATOMIC: a resolving to Fixed.md, DISAPPEARS from Issue (open-only) and APPEARS in Fixed_S (closed-only). Ten rows violate all three properties right now — they carry a status yet current_location='Issues', so render in docs/Issues.md and are listed in Issues_Summary.md with a status that reads '(→ Fixed.md)', while appearing in Fixed_Summary.md. Any reader of the open tracker is told these are open with MANIFEST (measured 2026-08-21): BOB-128 (Completed), BOB-129, BOB-131, BOB-145, BOB-146, BOB-148, BOB-153, BOB-157 (all 'Fixed (→ Fixed.md)'). Counting: BOB-155/087/157 each greentext in Issues.md, 0 in Fixed.md, present in Issues_Summary.md, 0 hits in Fixed_Summary.md. ROOT CAUSE (rooted at runtime, not inferred). 'close' performs atomic migration and REQUIRES –even 'update –status' sets any §11.4.15 close value with NO evidence and NO migration and it knows the location, because it has a COPY of the real DB: \$ workable-items –id BOB-065 –db repro.db –status 'Fixed (→ Fixed.md)' update: BOB-065 updated (status=Fixed (→ Fixed.md), type=Task) repro.db 'SELECT atm_id,status,current...' BOB-065 Fixed (→ Fixed.md) Issue seam that is supposed to be the ONLY path (close, evidence-gated per §11.4.19) has a parallel unguarded path that reaches same status while skipping BOTH the requirement and the migration. WHY? CAUGHT IT (§11.4.238 coverage-escape) Three standing checks stay GREEN on holding the forbidden row, verified on poisoned copy from the repo root so no artifact is involved: (1) 'validate' → 'C

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
133	Medium	Fixed (→ Fixed.md)	Bug	—	items, all invariants satisfied' (it has status↔location coherence invariant 'in sync' (DB and Markdown agree — WRONG state; agreement is not correct). CM-CLOSURE-SEAM-BINDS CHECK A flags NON-terminal rows whose id appear work commit; these rows are terminated are outside its predicate by construction was found by reading a status tally, not automated regime — a §11.4.238 disclosure channel escape, which is itself a defect standing to the mis-located rows. ACC (a) 'update' REFUSES a terminal status names 'close' as the correct path, with §1.1 mutation proving the refusal (re-guard must make the mutation pass) 'validate' grows a status↔location coherence invariant that FAILS on the forbidden a golden-bad fixture and a negative of legitimately terminal row in Fixed mode fire — §11.4.201(1)). (c) The 10 existing drained to Fixed with class-matched per row, or, where a row's evidence of produced, honestly re-opened rather migrated on a bare assertion. (d) Horizontal boundary: this closes the update-path the detection gap; it does not claim evidence historical status write was evidence-1 NOT CLAIMED. No fix is implemented filing. The 10 rows are untouched; doing them is acceptance (c) and each needs evidence, not a bulk UPDATE. BOB-167 — WHAT. download-proxy of Server-Sent-Events routes. They are the expensive class — long-lived connections hold a worker and a generator for the — but only one is rate-limit classed: routes.py:801 @router.get('/search/stream/{search_id}') @_rl('sse_stream') <- class routes.py:150 @router.get('/theme/stream')

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					def stream_theme(...) <- NO limiter d _rl(cls) resolves to limiter.limit(limit so /search/stream is bound to the sse class while /theme/stream falls throu application default. Measured live on running stack: /api/v1/theme/stream ratelimit-limit 120. PROVENANCE + A CORRECTION WORTH KEEPING (\$11 was surfaced by the BOB-109 scaling whose report framed it as: ‘sse_stream_limit_decorator is define imported/applied nowhere ... SSE fal to the 120/minute default: 24x less pr That framing is WRONG and was NO given. The agent searched for one sy NAME; the wiring uses a different m (@_rl(‘sse_stream’)), and it IS applied search/stream. Verified by reading routes.py:795-806 and the _rl helper routes.py:46-51, with a control needl confirming other *_limit_decorator s show real usage in api/init.py so the was not a blind search. The agent’s MEASUREMENT (120 on /theme/strea correct and is what makes this a real MECHANISM was not. Both halves ar so the next reader does not re-derive wrong cause. WHY IT MATTERS. An v SSE endpoint is the cheapest way to p resources: each connection is held op default class permits 120/min of them declared sse_stream class exists prec because this route shape needs a tigh than ordinary GETs. ACCEPTANCE. (a decision, recorded, on whether /them belongs in the sse_stream class or ge warrants the default — this is a polic not automatically a bug to patch. (b) in sse_stream, the decorator is applie drives BOTH SSE routes and asserts e its INTENDED class limit from x-rate

#	Level	Status	Type	Fixed-In Tag(s)	One-line description

(d) Honest this does not claim 120/min is exploit deployment; with network_mode hos reverse proxy every caller shares the bucket, which BOB-111 measured an separately. NOT CLAIMED. No chang limit values were read from headers driven to exhaustion — the limiter is shared with concurrent agents on th (§11.4.119). BOB-168 — WHAT. scripts/ run_all_challenges.sh:66 lists “scaling_horizontal_challenge.sh” in challenge set. challenges/scripts/ scaling_horizontal_challenge.sh does sed -n ‘66p’ scripts/run_all_challenge “scaling_horizontal_challenge.sh” \$ l challenges/scripts/ scaling_horizontal_challenge.sh ls: ca ...: No such file or directory VERIFIED independently, not taken on report — by the BOB-109 scaling agent and re- here by direct invocation. WHY IT M Whether this is cosmetic or a §11.4.2 honesty defect depends entirely on h runner treats a missing entry, and th first thing to determine: if it SKIPS sil challenge bank advertises coverage i have (a §11.4.266 claim-vs-reality rov passing challenge behind it); if it FAI runner is permanently red for a reas unrelated to the system under test, w readers to ignore it. Neither outcome acceptable; they need different fixes. ACCEPTANCE. (a) Determine and rec runner’s actual behaviour on the mis

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					by invoking it, not by reading it. (b) E author the challenge, OR remove the with §11.4.124 discipline: check git h whether it once existed and was dele silently-dropped challenge is the mor interesting defect. (c) If the runner si missing entries, that is its own findin challenge must be loud (§11.4.3 SKIP reason at minimum), never absent-a SEVERITY. Low as a defect, but it sits challenge-coverage seam, so (c) may own item. CORRECTION 2026-08-22 (THIS ITEM’S PREMISE WAS FALSE, a was mine. Recorded openly rather th edited. scaling_horizontal_challenge. It is at submodules/challenges/challe scripts/scaling_horizontal_challenge. executable, 3107 bytes, dated Aug 7. 9 other entries and the meta-runner. It deleted: added to the roster at 1c959 challenge itself added in the submod 873c0b1, and a pickaxe search across repositories and all branches finds Z deletions. HOW I GOT IT WRONG. run_all_challenges.sh reads submodu challenges/challenges/scripts/. I chec challenges/scripts/ — a DIFFERENT d belonging to a DIFFERENT, glob-base Two similarly-named directories; I m the wrong one. That is a §11.4.201(9) identity error. Worse, I wrote that it v “verified by invocation”: I had listed and never run the aggregator, so the overstated the evidence class as well the answer wrong. THE LESSON, whi generalises past this item. In the SAM correctly caught a sibling agent maki exact class of error on BOB-167 — a z produced by searching one symbol n applied a control needle there. Then the needle one paragraph later on m

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					measurement. The distinction that was caught it: A CONTROL NEEDLE PROVIDED INSTRUMENT CAN SEE; IT DOES NOT IS POINTED AT THE THING UNDER TEST §11.4.201(7)(b) as commonly applied blindness; it does not guard mis-aiming needle for THIS query would have been resolve the path the runner itself read confirm that some directory listing was WHAT IS ACTUALLY WRONG, and it is more than what I filed. The missing-entry problem no challenges by definition, so it can be exercised safely. Run against a checker the submodule is absent — the ordinary a clone made without –recursive — the runner (byte-identity sha-asserted, no reports: PASS: 0 FAIL: 0 SKIP: 16 TOTAL OBSERVED EXIT CODE: 0 An ENTIRE BANK REPORTS SUCCESS. Not one data entry tolerated — the whole suite silent without executing anything. That is § false-null verbatim, and it is observed rather than constructed (§11.4.115(G) ACCEPTANCE. (a) ANSWERED, though I filed: the runner reports a loud, court and then never blocks, because the expression reads only the FAIL count dangling-entry half is VOID — nothing dangling. (c) The real work is the exit roster entry the runner cannot execute be indistinguishable from a healthy decision recorded in docs/qa/BOB-169 decision_missing_vs_skip.md. RELATED REPORTED NOT FIXED: scripts/pre_build_verification.sh:1792 carries SKIP/MISSING conflation one level up other runner. Filed separately. BOB-169 — WHAT. The §11.4.65 market export mandate requires every in-shipment .html/.pdf twins. 286 of the 326 .
135	Medium	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
136	Low	Fixed (→ Fixed.md)	Bug	—	under docs/ (excluding dist/ and node_modules/) are pandoc FRAGMENTS — they begin with BOB-171 — WHAT. Both rate limiters use a per-client bucket on the LEFTMOST element of X-Forwarded-For when TRUST_FORWARDED_FOR is enabled. The new proxy/src/api/rate_limit.py:117-123 (:117) the new stdlib limiter in plugins/download_proxy.py (:7186), which was deliberately built to exact policy parity with That element is CLIENT-SUPPLIED. A reverse proxy APPENDS the peer address to the RIGHT of whatever arrived, so the leftmost entry is whatever the client sent — a bucket is controlled by construction, not by configuration. Consequences with a bucket on: (1) rotating a forged leftmost value to an unlimited sequence of fresh buckets, (2) total bypass of the limit the flag is supposed to make MORE accurate; (2) it also defeats the idle-reap cap, since each forged identity is a distinct key — the bucket map is a memory growth surface bounded only by the bucket cap. The cap's eviction then discards the bucket for REAL clients to make room for forged buckets. EXPLOITABLE AS DEPLOYED TODAY, and that's why this is Low, not High. TRUST_FORWARDED_FOR defaults OFF for all sites, and the deployed stack runs in network_mode host with no reverse proxy in front (verified across all five compositions) so peer addresses are real client IPs and no collapse occurs. The defect is latent: in the moment someone puts a proxy in front, the flag turns the flag on to recover real client addresses, which is exactly the situation the flag was intended to prevent. The failure mode is therefore 'correct configuration change silently disabled limiter', not 'currently broken'. PROVEN. Raised as MINOR-3 by the independent

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					of the BOB-111 rate-limiter work and independently confirmed by the imp agent, which noted it at BOTH source tracked follow-up rather than fixing change. Filed here because neither a write access to the tracker. WHY IT C BOTH PORTS. :7186's limiter was built deliberate policy parity with :7187's, this parsing. Fixing one and not the o leave the two surfaces disagreeing on identity — worse than the shared def because it becomes surface-dependent untestable as a single invariant. ACCI (a) Replace leftmost-element parsing trust-aware resolution at BOTH sites: rightmost-minus-N-trusted-hops, or a proxy CIDR allowlist where only a pe the allowlist may assert XFF — is a deployment-topology decision an recorded, not assumed. (b) A test tha rotating leftmost element and asserts key does NOT rotate, per site. (c) Pair mutation: restore leftmost parsing an must FAIL. (d) Negative control (§11.4 with TRUST_FORWARDED_FOR OFF, must be ignored entirely and keying back to the peer address — a guard t honouring XFF when the flag is off w worse defect than the one being fixe boundary: this closes header-forgery does not make per-IP limiting fair be where many real users legitimately s address. NOT CLAIMED. No change n sites still parse leftmost; the flag still BOB-173 — WHAT. download-proxy/s hooks.py:96-102: def _save_hooks(ho list[dict[str, Any]]) -> None: try: os.makedirs(os.path.dirname(HOOKS exist_ok=True) with open(HOOKS_FL json.dump(hooks, f, indent=2) except
137	High	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					as e: logger.error(f'Failed to save hook {hook_id}: {e}') catches EVERY exception, logs, and returns None. The signature returns None, so the caller has no channel to learn the write failed. The call sites then report success unconditionally. :152 _save_hooks(hooks) :174 _save_hooks(hooks) :154 logger.info('Hook saved: hook: ...') :175 logger.info('Deleted hook: ...') return HookResponse(hook_id=..., ...) :175 {'message': 'Hook deleted', ...} USER-VIEW: A CONSEQUENCE, which is why this is not a code-hygiene nit. A user POSTs a hook and receives HTTP 200 and a hook_id, and the hook was never written — their automatic cleanup never fires, and the API told them it worked. Symmetrically, a user DELETes a hook and receives 'Hook deleted', the file still holds it, and the hook is still there again after the next restart. In both directions, the product reports the opposite of what happened, and the only trace is a log entry if nobody is watching. THIS IS THE \$11.4.201(6) SHAPE. The path combines two dangerous capabilities from that anchor's taxonomy: INTERNAL MUTATION of a shared resource (a file) and write) and EXTERNAL SIDE EFFECT (outbound calls the system will or will not work) — so it is required to FAIL CLOSED: verify precondition, refuse when it cannot be done, and surface the refusal. Instead it fails with a bare 'except Exception:' that only looks like an exact anti-pattern §11.4.252 enumerated in the product layer it is also a §11.4.201(6) violation. A successful write and a swallowed failure are indistinguishable to the caller. PROVIDED: Surfaced as an out-of-scope observation by an independent reviewer of the BOB-13. This is isolation work — this swallow is what turned that defect into an 'assert 0 == 1' mystery because the EACCES on /config was logged but discarded while the endpoint kept returning 200. Verified here directly from source code.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					filing (the function body and both calls above), not taken on report. Recorded §11.4.238 discovery-channel escape. agent reading code during an unrelated investigation, not by the automated C — the coverage gap is a defect of equal to the defect itself. ACCEPTANCE. (a) <code>_save_hooks</code> propagates failure — <code>raise</code> return a status the callers must consider. Both endpoints translate a persistence into an HTTP error (500-class), never body; a create that did not persist must return a <code>hook_id</code>. (c) A test drives each with the hooks file unwritable (read-only a patched open raising <code>OSError</code>) and non-2xx status AND that a subsequent not list the phantom hook — assert on observable outcome, not on the log line. Paired §1.1 mutation: restore the swap test must FAIL. (e) Audit the same file swallows — this is a pattern, and one rarely alone. (f) Honest boundary: the claim the write currently fails in process claims that WHEN it fails the user is opposite, and the BOB-135 investigation does fail in at least one real environment CLAIMED. No change made. No assessment how often the write fails in the operational deployment. RECORDING A SHELL ERROR MY OWN (§11.4.6): the first version of description was written with the anti-snippet inside backticks in a double-quoted argument, so the shell ran it as command substitution and the text was replaced with nothing — the stored description read the exact anti-pattern’. This is the SEEN this session that backticks-inside-double has corrupted content (the first many commit message). Fixed here by editing a Python client with no shell quoting. Noted because a silently-truncated d

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
138	High	Fixed (→ Fixed.md)	Bug	—	description is exactly the kind of quick corruption §11.4.201(7)(c) warns about. The path is part of the instrument, and it is not without erroring. BOB-174 — WHAT. A corrupt hooks file is silently indistinguishable from “no hooks configured”, and the next create them for every existing hook while returning a list. Three defects on one path, filed together because fixing any one alone leaves the path reachable. A1 — download-proxy/src/hooks.py:104-112. <code>_load_hooks</code> wraps <code>except Exception: logger.error(...)</code> through to return <code>[]</code>. A truncated or corrupt <code>hooks.json</code> is therefore reported to even as an empty, healthy hook list. Confirmed source. A2 — the consequence, and this is High. <code>create_hook</code> loads, appends. Given a corrupt file that load turns into <code>save</code> writes a one-element list over the file. Every previously-configured hook is lost. Measured by the implementing agent. The ALREADY-FIXED tree, so this survives. BOB-173 write-failure fix: BEFORE on disk <code>['prod-hook-0', 'prod-hook-1', 'prod-hook-2']</code> reports : 200 <code>{'hooks': [], 'count': 0}</code> <- ZERO hooks configured DELETE reports <code>{'detail': 'Hook not found'}</code> <- for a hook in the file POST reports : 200 <code>hook_id=3c8a5930-... AFTER on disk : ['3c8a5930-...']</code> Three prod hooks destroyed HTTP 200 throughout, nothing surfaced to user. A5 — <code>_save_hooks</code> writes with <code>open(path, "w")</code>. A crash, ENOSPC, or <code>write</code> truncates the file in place. That is the corruption A1 then reads as “no hooks configured”. A2 overwrites. The same codebase also has the correct pattern: <code>theme_state.py:104-112</code> <code>tmp-file + os.replace</code>. WHY THE THREE DEFECTS? ITEM. A5 manufactures the corrupt file.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					misreads it as empty, A2 destroys the Fixing only A1 leaves truncation read fixing only A5 leaves an existing corrupt data-loss trigger; fixing only A2 leaves lying about what is configured. The c defect. DELIBERATELY NOT FIXED UN BOB-173, and the reasoning is sound. implementing agent identified all thr auditing sibling swallows as that item and declined to fix them in the same because: they change GET semantics endpoint the frontend consumes (200 they need a CORRUPT-file reproduction than the UNWRITABLE-file one BOB- and they need a design decision that genuinely not obvious — a MISSING legitimately means “no hooks config a CORRUPT one does not, and today’s cannot tell those apart. Expanding B scope to cover them would have mea that decision unexamined. ACCEPTA Distinguish MISSING from CORRUPT file remains an empty list; a corrupt error, never silently []. (b) Decide and what GET does on corruption — 5xx, an explicit degraded marker the fron render. This is the design decision, an be stated rather than inferred from v the patch happens to do. (c) create/de NOT overwrite a file they could not p refuse, do not clobber (§11.4.252: mu external side effect must fail closed). the write atomic via tmp + os.replace theme_state.py’s existing pattern ratl inventing it (§11.4.28). (e) Tests asser USER-OBSERVABLE outcome, not log a corrupt file, assert GET does not cla hooks, assert a create refuses rather destroying, and assert the file still ho original hooks afterwards. (f) Paired mutation per guard. (g) NEGATIVE C

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
139	Medium	Fixed (→ Fixed.md)	Bug	—	(§11.4.201(1)): a MISSING file must st empty list and a working create; a VA must behave exactly as today. A fix th every load fail closed by failing alwa fix. A3, RECORDED SEPARATELY, NO THIS CHAIN. VALID_EVENTS and HookEventType are two sources of tr closed set. Verified identical today, un against drift: if they diverge a hook r successfully and then silently never f assertion pinning them would close i CLAIMED. No change made. The BOB failure fix is real and orthogonal — i FAILED write honest; it does nothing SUCCESSFUL write of wrong data der misread file. BOB-176 — WHAT. _get_enabled_trac download-proxy/src/merge_service/s gates rutracker on RUTRACKER_USE RUTRACKER_PASSWORD only. It neve RUTRACKER_COOKIES. So an operato configured with cookies alone — no v no password — never has rutracker c all, and the tracker is silently absent fan-out rather than failing visibly. W INCOHERENT WITH THE REST OF TH _search_rutracker treats COOKIES as PREFERRED auth path, not a fallback nnmclub sibling DOES check its own variable. So the same codebase holds positions at once: cookies preferred a search site, cookies ignored at the en gate, and cookies honoured for a sibl WHY IT MATTERS MORE THAN IT LO CLAUDE.md documents a standing o mandate (2026-08-15) that per-tracker cookies files at \${TRACKER_COOKIE_ cookies_<tracker>.txt are auto-loaded as <TRACKER>_COOKIES before ever up, restart, install Stage 6 and start.sl

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					and rutracker is named in that set. So SANCTIONED, documented configuration for this tracker produces exactly the gate ignores. An operator who follows documented instructions gets a tracker never runs, with no error to explain MODE. Silent absence, not a visible false same §11.4.201(6) false-null shape as one layer earlier. BOB-172 fixes a tracker RAN and was REFUSED being reported empty; this is a tracker that never ran the merged result simply has one fewer contributor with nothing to indicate PROVENANCE. Found by the BOB-172 implementing agent while tracing the enablement path to locate the status-defect. Recorded here rather than fix change: it is a separate defect on a seam with its own oracle, and folding have widened BOB-172 past its capture evidence. ACCEPTANCE. (a) The enable honours RUTRACKER_COOKIES as an independently sufficient credential, not what _search_rutracker already prefers what the nnmclub sibling already does asserting that a cookies-only configuration ENABLES rutracker, driving the real _get_enabled_trackers rather than a Paired §1.1 mutation restoring the use password-only gate — the test must give NEGATIVE CONTROL (§11.4.201(1)): a configuration with NO credentials at still leave rutracker DISABLED. A fix enables an unauthenticated tracker instead than the gap, because it produces false searches instead of absent ones. (e) All other trackers' gates for the same asymmetry rather than fixing only the one that was — three positions in one codebase suggest nobody has checked them together (§ HONEST BOUNDARY. Not verified against

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					cookies-only deployment; read from the BOB-172 agent and recorded on i The reading is specific and checkable whoever takes this should confirm by before relying on it. 140 High Fixed.md) Bug — BOB-177 — W BOB-172 wired an identical 4-line HT guard at five private-tracker fetch sit download-proxy/src/merge_service/s (rutracker cookie :1390, rutracker cre :1468, kinozal :1648, nnmclub :1761, :1934). Only the rutracker COOKIE pa exercised by tests. EVIDENCE (review authored mutation R1, per 11.4.194(6 the BOB-172 independent review): de ONLY the kinozal guard wiring (search.py:1655-1658) while leaving t classifier intact left the full merge_se at 883 passed, ZERO failures. The suit see four of the five sites. FAILING SC refactor drops or subtly breaks the w kinozal, nnmclub, iptorrents, or rutr credential. A 403 at that site silently t to status=empty with error=None -- t BOB-172 signature -- and no test redd DIRECTION (reviewer preferred): col five duplicated wirings into one shar e.g. _check_search_response(tracker_ status, body) -> bool, so there is ONE and a sixth site cannot be added ung (11.4.251 byte-identical-fork extractio Alternative: parametrise the guard te all five sites with per-site stub sessio ACCEPTANCE: mutating the wiring at five sites reddens at least one test. Pr running the same R1 deletion at each turn. 141 Medium Fixed (→ Fi Bug — BOB-178 — WHAT: downlo src/merge_service/search.py:1638-16 a failed kinozal LOGIN response with login_resp.status not in (200, 301, 302

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					logger.error(...); return [] -- and sets M diagnostic. FAILING SCENARIO: Cloud returns 403 on takelogin.php. The kin reads status=empty, error=None. That BOB-172 signature exactly: a refusal the user as an empty result set. CONT establishing this is an oversight, not a choice: the rutracker and nnmclub lo DO set diagnostics (upstream_captch auth_failure), and the iptorrents logi falls through to the search fetch whe BOB-172's new guard catches it. Kino one leg with neither. FIX DIRECTION: _classify_upstream_http_status(login, "") before the early return, or an auth diag for the status-in-(200,301,302)-b case. ACCEPTANCE: a stubbed 403 on login endpoint produces a non-None the kinozal chip, with a RED captured the pre-fix code first (11.4.115). 14 Fixed (→ Fixed.md) Bug — BOB- WHAT: download-proxy/src/api/routes.py:727-745 sets status=captcha with a hardcoded message naming R 'RuTracker requires CAPTCHA. Use /a rutracker/captcha'. FAILING SCENAR search returns zero results and the c flavoured diagnostic came from NNM Turnstile, not RuTracker. The user is a RuTracker captcha endpoint for an problem. SEVERITY BOUNDED: the fu and tracker_stats travel in the same r payload, so the truth is present and a reads them is not misled -- only the h wrong. The branch was revived by B error propagation (correctly: suppress propagation would recreate the same one layer up, 11.4.247) and is already the routes layer by tests/unit/api_layer test_routes_coverage.py:782. FIX DIR derive the message from the tracker(

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					actually erred rather than hardcoding SCOPE NOTE: api/ was owned by a si stream during BOB-172; the author w not to touch it. ACCEPTANCE: an NNM captcha diagnostic on a zero-result s produces a headline naming NNMClu High Fixed (→ Fixed.md) Bug — — WHAT: scripts/ generate_markdown_exports.sh acce arguments. It unconditionally scans PROJECT_ROOT/*.md, docs/ recursive scripts/ recursively (scan loops at line 105/111/116 as of 2026-08-23; they we when this was filed — line numbers . the BOB-169 fix, the substance is unc was independently verified by execu invoking the generator with an expli produced an out-of-scope export and requested one), and PROJECT_ROOT i from BASH_SOURCE (line 17). A calle writes 'bash scripts/ generate_markdown_exports.sh docs file.md' gets a WHOLE-TREE run with argument silently discarded. WHY IT the caller reasonably believes the run scoped to one file. It was not. In a sha checkout with parallel work streams regenerates any export whose .md is its derived files anywhere in the tree artifacts in other streams' scopes and BOB-068 auto-commit hazard, into an stream's commit. CLASS: a false affor script's interface implies a capability have (11.4.201: an interface must me claims). FIX DIRECTION: either accep path arguments and honour them (so run to exactly those files), or REFUSE clear message when arguments are p Silently discarding them is the one op must not remain. ACCEPTANCE: pass either scopes the run to it, or exits no

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
144	Medium	Fixed (→ Fixed.md)	Task	—	naming the unsupported argument. A capturing today's silent-discard behavior (11.4.115). LIVE INSTANCE, MEASUREMENT 2026-08-23 (this is no longer hypothetical). During the BOB-169 fix the conductor the generator with an explicit path to ONE document. The argument was done and the whole tree was scanned. It got docs/qa/BOB-174/DESIGN_DECISION.{html,pdf,docx} at 11:50 -- a SIBLING document, while that stream's author editing the source (.md mtime 12:00) exports were therefore stale on arrival additionally carried the pre-fix BOB-174 defect. The sibling author independently reported them as stale in its own hand having no idea another stream had changed them. SECOND-ORDER LESSON worth learning with this item: the conductor's attempt the blast radius ALSO failed, and failed 'git status --porcelain \\\ grep -E "(html pdf docx)"' returned only its own files and read docs/qa/BOB-174/ is an UNTRACKED DIRECTORY, which porcelain collapses to a single line, so the grep was structurally incapable of seeing the files inside it (a): matched the wrong surface; the count read as absence). The instrument that it is 'find BOB-182 — OPERATOR DECISION (2026-08-23) §11.4.66 interactive clarification): MONOTONE RATCHET §11.4.224(E) adoption answer, recorded as consumer the adoption model for CM-EXPORT-COMMITMENT VALID is the MONOTONE-DECREASE. The count may only go down, never up. Immediate hard floor, changed-code-deadline, and per-corpus phase-in were offered and NOT chosen. This closes BOB-182 — the half that was genuine

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					operator's. THE REMAINING HALF IS DEFECT STILL OWED: BASELINE is a constant, so the ratchet does not act — on improvement the gate PASSES the value to lower it to, but nothing and the gate keeps permitting regression the original count after the corpus he must NOT collapse §11.4.249 role sep gate that writes its own threshold du build run becomes a PRODUCER as w GATE. Acceptable shapes include a p baseline the gate READS but never w lowering via a separate explicitly-inv command, or a gate that FAILS loudly live count is below baseline so drift b actionable refusal. This answer is rec consumer DATA per §11.4.35 — it is t operator's stated choice, not an agen and supersedes any prior agent-chos on this question. Options not chosen above so a future reader does not re- settled call (§11.4.112(5) bounded-ver discipline applied to decisions). — pr text follows — WHAT: CM-EXPORT-C VALID (pre-build invariant 50) adopt pre-existing violations via a monoton ratchet rather than a hard floor. Two owed. (1) THE ADOPTION DECISION OPERATOR'S, NOT THE SCRIPT'S. 11.4 requires the brownfield adoption qu SURFACED to the operator and the an recorded as consumer DATA – never ratchet. What exists today is a header plus a BOBA_EXPORT_CHARSET_BAS override: that DOCUMENTS a decisio made, it does not RECORD an answer operator gave. The independent revi judged the choice defensible and wor reverse it (a hard floor on 301 violati the build unreachable, which 11.4.23 11.4.101 favours the reversible option

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
145	High	Fixed (→ Fixed.md)	Bug	—	correctly held that it is not yet complete. Options for the operator: immediate (BASELINE=0) / keep the monotone regression corpus phase-in / changed-code-only scheduled full-corpus deadline. (2) THE RATCHET DOES NOT ACTUALLY RATCHET. BASELINE is a hardcoded constant. CANNOT improve the gate PASSES and PASSES value to lower it to, but nothing lower. The gate keeps permitting regression all the way back to 301 after the corpus heals. The RATCHET now says tightening is MANUAL rather than claiming automatic behaviour that doesn't exist (11.4.6), but the honest statement is: stopgap, not the fix. WHY IT WAS NOT THE FIX: WITH THE FIX: a gate that writes its threshold during a pre-build run because it's PRODUCER as well as a GATE (11.4.24.1.1 separation), and that is a design character. The operator should approve rather than disapprove as a side effect. ACCEPTANCE: the operator's adoption answer recorded as consumed, and either a persisted baseline the gate keeps and never raises (with the role-separation question answered), or an explicit decision that manual tightening is acceptable. BOB-183 — The compiled Angular build shipped at download-proxy/src/ui/dist/ still carries the BOB-164 color defect verbatim: scanned 2026-08-23 21 violation nodes on darcula/dark and darcula/light, while the same sources on scratch path report 0 across all 16 palette mode combinations. The fix is therefore at the SOURCE layer and absent at the DIST layer, so §11.4.108 layer 2 is NOT closed. Users still see the low-contrast dashboard, and compounding facts make this silent regression obvious: dist/ is gitignored, so the diff never shows in a diff; and scripts/ins

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
146	—	Fixed (→ Fixed.md)	Bug	—	asserts only that the directory EXISTS that it is newer than the sources it was from, so a stale bundle passes installation unchallenged. Acceptance: install (or equivalent gate) FAILS on a bundle of sources, the bundle is rebuilt, and does BOB-164/axe_contrast_scan.py run against download-proxy/src/ui/dist/frontend/, exits 0 with zero violation nodes and blocking incomplete nodes. BOB-186 — workable-items diff returns and the verdict “DB and Markdown are on a PARTIAL read: invoked with –iss without –fixed it compared 77 Markdown against 184 DB items and called that printing both mismatched counts in its output while 107 DB items were never compared against anything. Measure 2026-08-25: (A) no markdown paths – REFUSES exit 1; (B) –db-only -> honest Markdown compared”; (C) –issues all 0, “in sync (compared 77 Markdown against 184 DB item(s))”. The 11.4.201 null: a partially blind instrument returns same quiet green a genuinely-synced returns. IMPACT — CORRECTED 2026 original filing OVERSTATED this. I was CHECK 2 of the 11.4.106(F) commit seen exposed. It was NOT. scripts/hooks/does commit-seam.sh:277 passes BOTH –iss –fixed, and a repo-wide sweep found executable caller that breaks: the two callers (that seam and pre_build_verification.sh:549) both paths; the single-path hits are prose of files plus a static-scan test fixture. So was real and latent, never live in this The corrected claim is: any FUTURE caller would have been silently mis-t PROVENANCE, twice corrected. A sub

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					attributed the false-null to the no-pat which actually refuses correctly; the re-measured and relocated it to the p Then the fixing agent corrected the c on impact. Both corrections are recor neither wrong version propagates. F (uncommitted, constitution submodule to upstream tip 7f16739 before edit p Design: refuse by default (11.4.201(4) narrow per-tracker comparison PRE behind an explicit –partial-scope rather deleted (deleting an existing document capability would be an 11.4.122 silent mirroring how –db-only preserved the Markdown shape. Keyed on MEASURE content, never on flag presence — a l zero Fixed rows IS fully accounted for alone and still passes, so flag-keying v traded the false-null for an 11.4.201(positive refusal. Resulting property: ‘ reachable only when the two printed account for each other. RED 4 fail/5 p GREEN 9/9; paired 1.1 mutation is the revert, killing exactly the 4 defect-gu while the 5 preservation tests stay gr now refuses naming “107 item(s) loca Fixed (supply –fixed)”, the 107 confir an independent sqlite3 count (107 Fi Issues = 185). Incidentally closed an 1 gap: case As refusal had no test anyw TestDiffCmd_NoPathsStillRefuses nov OPEN: –partial-scope is the agents na choice, not an operator decision, and is cheap now and expensive after oth consumers adopt it. Other consumer shared submodule were not swept. C 2026-08-26. Already fixed 2026-08-25 constitution commit 5979128 (“fix(w items): diff claimed ‘in sync’ while 10 went uncomparing”) - only this tracke stale; no code work was owed. ROOT

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					proven from pre-fix source (11.4.6 - f inference): two individually-reasona of sync.go. (a) sync.go:852-863, the re “absent in Markdown” pass, carried d.CurrentLocation == "Fixed" && *f "" { continue } - its own comment d intent, suppress false positives for tra caller never supplied, correct in isolat the continue ALSO dropped those row differences, and nothing compensat sync.go:894-897, the verdict, printed and len(dbItems) - the two MISMATCH numbers - then decided purely on di THE VERDICT PRINTED BOTH NUMB NEVER COMPARED THEM. In one lin 11.4.201(1) false-positive guard silent narrowed comparison SCOPE while t stayed scope-unaware, so the fix for a positive created its 11.4.201(6) mirror CLOSED ON BEHAVIOURAL EVIDENCE reading the commit (11.4.226 evidence closure): the shipped binary now REE partial-scope verdict instead of repor sync” - “refusing to report a DB-vs-M verdict that would silently exclude p DB - the supplied Markdown path(s) account for 122 item(s) located in Fix –fixed)”, exit 1; with opt-in –partial-s reports “PARTIAL SCOPE - N differen of 201 DB item(s) were NOT compare The phrase “in sync” is structurally u on a partial read. Regression suite sync_diff_partial_scope_test.go (9 test with the fix. INSTRUMENT VALIDATE WAYS (11.4.201(7)(b)): negative contr regenerating Markdown from a copy “in sync (201 against 201)” exit 0, so t is not stuck-on-FAIL. Needle A (flip B status, Issues leg) detected exit 1. Need (delete BOB-067 on the FIXED leg - th this defect was blind to) detected as “

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
147	—	Fixed (→ Fixed.md)	Bug	—	DB, absent in Markdown” (200 vs 201) Each needle byte-verified applied before running. HONEST GAP (11.4.6): UNKNOWN whether the shipped binaries are byte-reproducible from HEAD source - they were rebuilt. Both were proven to carry the same and behave identically on the real code. This is the behavioural evidence this close to the code. No claim is made about classes different from compare (revision headers, *_Summary) BOB-189 — WHAT: the fail-open scanner shape-(A2) heuristic cannot distinguish ‘False’ meaning PROCEED-AS-IF-FINE from ‘return False’ meaning REFUSE. It flags textbook fail-CLOSED guards as fail-open defects: <code>_is_safe_fetch_url</code> (x3), <code>_qbit_add_succeeded</code> (x2), and the host boundary guard. INDEPENDENTLY VULNERABLE 2026-08-25 by the conductor rather than on the triage agent’s word: download <code>api/routes.py:1122</code> defines <code>_is_safe_fetch</code> returning bool, and its only call site at <code>reads</code> ‘if not <code>_is_safe_fetch_url(url)</code>: <code>logger.warning(Refusing SSRF-unsafe URL (non-public target); skipping); continue</code> False return REFUSES the URL. WHY IT MATTERS: per §11.4.201(1) a false-positive refusal is a FAIL-bluff of equal severity to a negative pass, and here the consequence is worse than noise - acting on the finding means making the SSRF guard stop rejecting False, i.e. deleting an SSRF protection gate. A gate that instructs you to remove security control is actively dangerous. It is merely imprecise. REPRO: run the fail-open scan; observe six hits; read each call site. ACCEPTANCE: the scanner distinguishes shaped from proceed-shaped False return site-aware, or an audited waiver list entry justification), the six drop out, and

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
148	—	Fixed (→ Fixed.md)	Bug	—	golden-FALSE fixture containing a re closed guard is added so the discrimi itself falsifiable per §1.1. BOB-190 — WHAT: ~/.local/lib/python packages contains binaries built for t cpython-313 ABI while the interpreter 3.14, so pydantic_core and rpds fail t and every test importing FastAPI dies time. CONFIRMED NOT OURS: an unt file fails identically, so this is environ pre-existing. WHY IT MATTERS: CLAU documents ‘python3 -m pytest tests/u –import-mode=importlib’ as the cano invocation and that documented com currently cannot run - docs and host the §11.4.99 misguidance class at the environment layer. scripts/run-tests.s sidesteps it by selecting .venv/bin/pyt working path exists and simply is no docs tell a reader to type. IMPACT: an following CLAUDE.md literally concl suite is broken; worse, an agent coul green by rewriting tests. ACCEPTANC repair the host site-packages so the d command works, or correct CLAUDE TESTING.md to name the venv interp canonical - decided explicitly, not left whoever hits it next. Discovered out- the fail-open triage agent, so per §11. also owes a coverage-escape note: no check asserts the documented test in actually runs. BOB-192 — WHAT: the BOB-161 gate 6 real fail-open skips RATCHETED rat fixed. Ratcheting is the constitution’s brownfield default (§11.4.135/§11.4.2 this repo’s own precedent, so the cho correct - but the remediation it defer work that must be owned somewhere THIS ITEM EXISTS: the gate’s own he
149	—	Fixed (→ Fixed.md)	Task	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
150	—	Fixed (→ Fixed.md)	Bug	—	asserted the 6 were ‘TRACKED SEPARATELY’ (§11.4.197)’ while no tracker row exists. §11.4.209 independent review verified the absence and raised it as IMPORTANT. That without a row those findings are in the parked-unverified debt class §11.4.210 names - the population an operator says the findings broken. A prose claim of being not tracking. WHAT EACH NEEDS: a set of fires on evidence the host ANSWERED. The reviewer either classify the response and FAIL to take a §11.4.69 reason that is honest. The response from the environment rather than from the response - verified against the live stream. asserted. Two of the six sit under ‘# a set of markers at tests/unit/ test_tracker_auth_live.py:105 and :106 the reviewer confirmed genuinely and so that marker must not be treated as an absolution. ACCEPTANCE: all 6 remediated. RED-first evidence per §11.4.115, the BASELINE ratcheted to 0, and the rate monotone-decreasing property preserved throughout (§11.4.227(A)). NOTE the MINOR-1: a count-baseline absorbs a one-in swap, so remediation progress checked against the finding SET, not a count. BOB-193 — WHAT: in download-proxy streaming.py the dedup set is written the yield — seen_hashes.add() / seen_hashes_local.add() execute at :3 ahead of emitting. If format_event raises result is never sent AND its hash is also recorded, so it is permanently dropped. Independently verified by the §11.4.227 reviewer at both sites: mid-search the persists across subsequent polls so the never re-emits; at completion the stream immediately after, so there is no later

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					either. Results later in the SAME batch yet added and do re-emit on the next is why the observed symptom is partial rather than total. WHY IT IS FILED SIM105 the §11.4.252 fail-open pass made this OBSERVABLE by adding a log line, which is the right first move — but observability is not a repair. The underlying at-most-once : remain, and per §11.4.226(5) a mitigation to close the defect it mitigates. THE DECISION IS A REAL TRADE, not an oversight to correct by moving to add-after-successful-yield at-most-least-once, but a DETERMINISTIC series of failures would then retry the same request every poll forever — trading silent loss for a loop. Options are (a) keep at-most-once the log line as the contract, (b) add-after-successful-yield with a bounded per-poll budget, (c) add-before-yield but remove on emit failure so exactly one retry occurs. ACCEPTANCE: an explicit decision re-implemented, and covered by a test that raises emit and asserts the chosen series with a RED observed first per §11.4.1.1 as MINOR-1 by the independent review of the fail-open batch; filed rather than absent because the residual defect is not retired along with logging that revealed it. BOB-195 — OPERATOR DECISION (2020 §11.4.66 interactive clarification): 7.1.1.1 SCANNER With NODES — KEEP SIM105 §11.4.252 fail-open scanner is FIXED by contextlib.suppress; ruff's SIM105 rule is ENABLED in pyproject.toml. Disabling it and the belt-and-braces both-at-once rule were offered and NOT chosen. Rationales with the decision: fixing the gate malfunction is harmless, whereas disabling SIM105 would leave the gate blind to any suppression written by hand, inherited from a de
151	—	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					style, or already present in the tree. I BEHAVIOUR: with contextlib.suppress and with suppress(...) (the from contextlib import suppress binding) wrapping a dangerous-combination call are DET the same severity and message shape except/pass form; a narrow suppress(SpecificError) around a N dangerous call must NOT fire, since a positive refusal is a §11.4.201(1) FAIL equal severity to a missed real one. CONSEQUENCE FOR THE NUMBER: c the scanner's finding count stops bei over try/except shapes and becomes census — any prior count citing com was scoped to try/except only. This ar recorded as consumer DATA per §11. the operator's stated choice, not an a inference, and supersedes any prior chosen default on this question. Opti chosen are named above so a future not re-litigate a settled call (§11.4.112 bounded-verdict discipline applied to — prior item text follows — WHAT: t §11.4.252 fail-open scanner matches shapes (A1)/(A2). contextlib.suppress node, so a swallow written that way VERIFIED BY THE CONDUCTOR with needle through the same invocation (§11.4.201(7)(b)), because a first atten returned 0 for BOTH forms and was the gate takes -root, not a positional, path exits on an unknown arg (§11.4 the invocation path is part of the inst Correct run: try/except/pass around os.unlink(user_supplied_path) -> 'FAI swallowed exception ... :5', the needl contextlib.suppress(Exception) around IDENTICAL call -> 'PASS - no swallow exception ... anti-patterns found'. Bot untrusted input with an irreversible

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
152	—	Fixed (→ Fixed.md)	Bug	—	both swallow everything; one is caught and the other is not. WHY IT IS WORSE THAN A PLAIN <code>try/except</code>: <code>pyproject.toml</code> enables <code>ruff</code>'s <code>SIM105</code> rule, which is 'use <code>contextlib.suppress</code> instead of <code>try/except-pass</code>'. Our own linter therefore encourages authors to rewrite the form this gate governs into the form it CANNOT. The two tools are pulling in opposite directions and the <code>try/except</code> runs more often. Every <code>SIM105</code> autofix shrinks this gate's coverage while the <code>try/except</code> shrinks down, which reads as progress. CONCLUSION: FOR THE NUMBER: the scanner's final decision is a FLOOR over <code>try/except</code> shapes, not a ceiling of swallows. Any statement of the form 'no open sites remain' must be read as 'no open sites remain except shapes'. ACCEPTANCE: the scanner recognises <code>contextlib.suppress</code> (a <code>WithStatement</code> item calls <code>contextlib.suppress</code> with a <code>BaseException</code> exception type) and applies the same capability test; a golden-TRUE fixture uses <code>suppress</code> form; a golden-FALSE fixture uses <code>suppress</code> wraps a single-capability diagnostic emitter and must NOT fire; and an exception decision on the <code>SIM105</code> tension - either the shapes this gate governs, or accepted and teach the gate to read it. Discover §11.4.252 remediation agent when it is a MINOR-3 fix required using <code>contextlib.suppress</code> at three diagnostic-emitter sites; those are legitimate and justified in-source. BOB-197 — OPERATOR DECISION (2026-08-26): GENERATE THE TOKEN A IT The conductor generates a 32-byte token and writes <code>BOBA_API_TOKEN</code> in the operator configures clients with it. 2026-08-26: token generated via <code>secrets.token_hex(32)</code>, appended to <code>.env</code> comment naming BOB-197 and the remediation env-gating fact, <code>chmod 600</code>, value shared operator ONCE and never written to

					file. Safety verified BEFORE writing (§11.4.10): .env matched .gitignore:27 was untracked (needle-proven — the matcher confirmed docker-compose. tracked, so the negative is real); a §9. backup was taken and is itself ignore write re-check confirmed .env still ig absent from git status. Pre-store audi only tracked BOBA_API_TOKEN= occ are the docker-compose passthrough {BOBA_API_TOKEN:-} and prose in th challenge — no literal value has ever committed. STILL OWED, and the iter open until it lands: the BOOT-TIME II (§11.4.254) that refuses to start LAN-I when the token is unset or empty. W arming is a state fix, not a defect fix - §11.4.226(5) is explicit that a state-on cannot close a defect item. Options n operator sets it themselves with the i blocking until then; invariant warns blocks on a named date. Recorded as DATA per §11.4.35 — the operator's s choice, not an agent inference. Optio chosen are named so a future reader re-litigate a settled call. --- prior item --- OPERATOR DECISION (2026-08-26) BOBA_API_TOKEN and keep 0.0.0.0, h BOOT-TIME invariant that refuses to bound with the token unset. This iter invariant. MEASURED FACT, not infer download-proxy/src/api/routes.py:83 require_api_token() reads BOBA_API request time and returns immediately unset or empty. Its own docstring sta plainly: "BOBA_API_TOKEN unset/em return (OPEN). This is the DEFAULT a preserves the current no-auth contra workflow". docker-compose.yml:237 BOBA_API_TOKEN=\${BOBA_API_TOK the container inherits empty unless t

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
153	—	Fixed (→ Fixed.md)	Bug	—	declares it. The operator .env does NOT do it, needle-verified per 11.4.201(7)(b): the matcher hit QBITTORRENT_DATA_DIRECTORY same file, so the miss is a real absence of a blind read. The qbittorrent-proxy component is RUNNING and LAN-bound at measurement time. Consequence: the ten routes the guard resolves as auth-wired are open to practice on a default deploy. WHY A SECURITY GATE CANNOT COVER THIS. The BOB-102 asserts static route WIRING - that a Depends(require_api_token) marker is a handler, decorator or router. It cannot do runtime ARMING, which depends on a read per request. Claiming the static guard it would be exactly the bluff the gate can prevent (11.4.262: machine evidence does not match the layer it claims). This is a boot-invariant class per 11.4.254. ACCEPTANCE boot-time check that, when the listener is bound (not loopback), refuses to start with a non-zero exit and a named cause if BOBA_API_TOKEN is unset or empty, and the state becomes UNREACHABLE rather than the default. Paired 1.1 mutation: remove the guard prove the service starts LAN-bound-and-accepts Golden-FALSE per 11.4.201(1): a loopback listener with the token unset must NOT be refused, or the check becomes a false failure refusal blocking legitimate dev work. COVERAGE-ESCAPE NOTE: found by the reading source during BOB-102 guard construction, NOT by the automated test which is itself the defect class 11.4.233. The boot-time check IS the new automated check that would have caught it. BOB-198 — OPERATOR DECISION (2023 §11.4.66): REFUSE TO START LAN-BOUND Go profile gets a boot-time guard: bind only, or refuse to start. It does NOT go

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					middleware in this cycle. Rationale c the decision: the profile is opt-in via - was not running when measured, and for development — so closing the exp a guard rather than a parity impleme Options not chosen: write auth midd parity with the Python route set (real it would partially un-defer BOB-101); dev-only with no guard (rejected — n would enforce it, and the next -profil this network silently re-opens 22 rou ACCEPTANCE: a boot-time check that the listener's bind address and refus when it is not loopback, with a paire mutation proving the check FAILs on bind, and a golden-FALSE proving a l bind is NOT refused (§11.4.201(1)). Sc reminder recorded so it is not lost: th covered by BOB-101's parity deferral about ports; folding it in would be a verdict leak. Recorded as consumer I §11.4.35 — the operator's stated choi agent inference. Options not chosen so a future reader does not re-litigate call. — prior item text follows — MEA conductor-verified independently of reporting subagent. qBitTorrent-go/c qbittorrent-proxy/main.go registers e three middlewares, at lines 62, 63 an middleware.CORS, middleware.Logg middleware.GinRateLimit. 					unusual filesystem, and reproduces v unprivileged commands. BOB-206 wa dismissed; this is the real defect that investigation surfaced underneath it ACCEPTANCE: (1) probe_location rea compares gid as well as uid, OR the a is deliberately justified in-source wit reason (if only uid matters to the use goal, say so and explain why the repa at all); (2) a RED fixture builds the se directory above, observes ok pre-fix, refusal post-fix (§11.4.115); (3) a gold fixture proves a correct uid+gid locat ok (§11.4.201(1)); (4) whichever way resolved, precondition and repair ag WHICH property they are talking abo disagreement is the primitive defect DISCOVERY CHANNEL (§11.4.238): fo BOB-206 verification stream, not by t automated QA regime. No existing te a gid mismatch. === CONFIRMED 202 RED AUTHORED — AND THE FIX DIF THE OPPOSITE OF WHAT THIS ITEM === CONFIRMATION (re-derived again dirty tree; line numbers happen to m probe_location() at scripts/lib/ ownership.sh:299-320 reads stat '%u' file branch, :314 dir branch), compar want at :301, and NEVER reads '%g'. ownership_operator_gid is defined a has EXACTLY ONE consumer — ownership_repair.sh:360 — verified a tracked AND untracked files, needle- (needle ownership_operator_uid -> 1 negative control -> 0; untracked swee 8 files, ownership_operator_gid -> 0); other hit is a docs/DB carrier or comm REPAIR SETS GID AT TWO SITES, not chown -h "\${OP_UID}:\${OP_GID}" WH and :963 find_args selects on (! -uid C FALSE ok REPRODUCED unprivileged

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					group from id -G + chmod g+s): dir ui gid=10 mode=2755, a REAL file create lands uid=1000 gid=10, probe_location ok rc=0. Needle arm: an absent path 'absent' rc=1 — the probe CAN refuse is real. DESIGN QUESTION ANSWERED **NARROW THE REPAIR. gid is NOT I bearing.** This item was filed assum PROBE was deficient. Measured, that backwards. - With correct uid and gid read, rename, move, chmod, utime, c ALL PERMITTED — including recover chmod 000 with NO elevation. Owner are selected by uid match and chmod only, so the operator can always rest Every FR-001 / FR-002 / FR-003 / FR-0 phrased as "owned by the account". N requirement mentions gid. - DECISIV conductor-verified in spec.md: the Co section blesses "Group-based workar (shared groups, permissive modes, a control lists) are acceptable impleme routes", and Dependencies makes "sh plus inherited permissions" NECESSA container platform cannot map the i account to the operator's identity. => THE PROBE would make FR-010 REF START on a configuration the spec ex sanctions — a §11.4.201(1) false-posit the exact failure class this project ke in its own gates. => AND THE REPAIR ALREADY DOING HARM: measured, a new file inherits gid 1000 instead o the setgid bit still set and NO diagnos repair silently dismantles a spec-san shared-group setup. THE RED: tests/u test_ownership_gid_agreement.sh (N lines, bash -n clean). It deliberately d assert "the probe must call stat %g" — implementation assertion that surviv cosmetic fix AND hard-wires one fix

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
165	major	Fixed (→ Fixed.md)	Bug	—	asserts the user-observable invariant probe_location(L) == ok IFF ownership --dry-run selects ZERO items under L 4 passed / 1 failed / EXIT=1, the failure PRECONDITION certifies it (ok) while reports it broken (selects:2)". VALIDA AGAINST BOTH CANDIDATE FIXES fr COPIES (production untouched): bas FAIL(1) · narrow-the-repair PASS(0) · probe PASS(0). Golden-FALSE passes so neither direction can go green by everything. That is what makes this direction-agnostic rather than a vote NOT APPLIED — scripts/ ownership_repair.sh:963: - find_args- "\${OP_UID}" -o ! -gid "\${OP_GID}" \) -j '%U\t%G\t%m\t%p\0') + find_args+=(! {OP_UID}" -printf"%U 163 BOB-210 — WHAT: scripts/ ownership_precondition.sh:342-348 the docker branch of detect_rootless documented-not-measured (accurate verbatim). The header then claims th built so that ‘an unverified reading c manufacture a refusal’. IT CAN. Line CONFIDENT rootful verdict whenever info succeeds with non-empty output no name=rootless field. Only the FAIL fall through to unknown (:387-394). T TO HARM: PUID=0 is declared in doc compose.yml:32 (and again for jacke deliberate per project policy). With a rootful verdict, that reaches the R3 r :517. So a genuinely ROOTLESS Dock whose docker info output SHAPE diff the documented one gets a FALSE RE produced by a branch the source itse was never measured — precisely the the header promises is impossible. T PROBLEM (§11.4.245 independence):

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
166	critical	Fixed (→ Fixed.md)	Bug	—	tests DO cover this path (tests/unit/test_ownership_rootless_detection.sh) the shim's output shape was authored SAME documentation as the code. On code share the unvalidated premise, cannot discover that the premise is w confirms the code matches the doc; n confirmed the doc matches Docker. ACCEPTANCE: (1) either the header c corrected to match :413's real behavi is changed to yield unknown when th is unverified — the two must agree (the docker branch's premise is valida REAL docker info output from a real daemon, or the branch is honestly m unmeasured at the point of USE, not header; (3) if validation is operator-g a rootless Docker host), record it as s §11.4.21 rather than leaving the head promise standing. ALSO VERIFIED G recorded so it is not re-investigated: unknown branch is handled IDENTIO both consumers (R3 :519-531, R4 :832 both a named SKIP, both return 0, ne refuses), ROOTLESS_VERDICT is cach so both read ONE measurement, and trap golden-FALSE fixture EXISTS (test_ownership_rootless_detection.s drives name=rootless-lookalike insid path and must NOT read rootless; str guard at :396-411 uses exact field equ substring). DISCOVERY CHANNEL (\$ found by the BOB-206 verification str BOB-212 — WHAT: .gitignore:31 is a glob <i>credentials</i>, followed by a HAND MAINTAINED per-file allowlist of ! ex (lines 34-50). Any NEW source file wh contains 'credentials' (or 'creds') is si ignored: git add refuses it and git sta NOTHING. The author gets no signal

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					file simply does not exist as far as the path is concerned. HOW IT SURFACE BOB-204 stream authored a RED test credentials_failclosed_test.go. It vanished only because it went lost the file it had just written. It renamed bob204_failclosed_test.go to escape both <i>credentials</i> and <i>creds</i>, and the file became visible. A silent deliverable loss, caught rather than by any gate. INDEPENDENTLY CONFIRMED BY THE CONDUCTOR, confirmed needle proven: git check-ignore -v -n qBitTorrent-go/internal/jackettapi/credentials_failclosed_test.go -> .gitignore:31:<i>credentials</i> (IGNORED) git check-ignore -v -no-index qBitTorrent-go/internal/jackettapi/zzz_probe_test.go -> no match (ignored) <- the needle: instrument path not seen, so the hit above is real git check-ignore -v -no-index frontend/e2e/credentials.spec.ts -> .gitignore:31:<i>credentials</i> (IGNORED) git check-ignore -v -error-unmatch frontend/e2e/credentials.spec.ts -> tracked SECOND, LATENT INSTANCES frontend/e2e/credentials.spec.ts is matched by the same rule and survives ONLY because it was already tracked (git honours the index over .gitignore for tracked paths). Deleted it — an ordinary refactor, a branch operation, a file move — and it disappeared silently. It is one routine operation and being lost. (For contrast, credential-dialog.component.spec.ts is genuinely covered by the DIRECTORY rule !from app/jackett/credentials/ at line 43, no file entry.) WHY THIS IS A \$11.4.201(1) NULL, NOT MERELY AN INCONVENIENCE blind instrument and the clean tree remains identical quiet zero. git status showing means BOTH ‘no new files’ AND ‘a new file but is invisible’. There is no signal that distinguishes them. The commit path

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					thing every other gate's output event travel through — cannot see its own WHY IT IS NOT SIMPLY 'ADD ANOTHER' that is the mechanism that produced A hand-maintained allowlist against glob has the §11.4.251/§11.4.205 shape future legitimate credential-named source needs a hand edit nobody will remember make, and the failure mode of forgetting SILENT. The same shape as BOB-205's maintained DANGER_ROOTS: a list that edited in lockstep with the tree, with that notices when it was not. TENSION RESOLVE HONESTLY (§11.4.10 vs §11.4.11) the glob exists for a real reason — §11.4.11 forbids credential material reaching broad deny-all is the conservative-safety Narrowing it carelessly would re-open a leak channel. So the fix is NOT 'delete Candidate directions, operator decisions (§11.4.66): (a) narrow the deny to what carries secrets — extensions and directories (.env, secrets/, credentials.json yaml etc) rather than every path containing (b) keep the deny-all but add a GATE that when an untracked file matches an ignored AND lives under a first-party source root has a source extension, so the swallow is loud instead of silent; (c) both. (b) alone is false-null even if the glob stays exactly the same and is the smaller change. ACCEPTANCE NEW credential-named source file under first-party source root either commits normally produces a LOUD refusal naming the reason it blocked it and the remedy — never silent RED that creates such a file and asserts current silence, flipping to the loud path (§11.4.115); (3) a golden-FALSE providing secret material (a .env, a key) is STILL the §11.4.201(1) guard, because a fix to credentials to close a false-null is strict

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					than the defect; (4) frontend/e2e/credentials.spec.ts is made safe by rule than by the accident of already being DISCOVERY CHANNEL (§11.4.238): for BOB-204 stream when its own deliver disappeared — NOT by the automated and not by any gate. Nothing in the re that an authored file actually became git. Coverage-escape audit: no surface this class at all. === SCOPED AND ME 2026-08-26 — RECOMMENDATION (b IS DISPROVEN NOT MERELY DISFAVOR TASK 1a — TRACKED FILES SURVIVED BEING TRACKED: 3, not 157. A raw s 2795 tracked paths hit 157 ignore rule of those are NEGATIONS (! lines), i.e. re-included and safe BY RULE. Report the blast radius would have been a \$1 false positive; the investigating stream this itself. Two independent instrumen ignore -v filtered on non-negated patte bare check-ignore which emits only tr excluded paths) produced IDENTICAL frontend/e2e/credentials.spec.ts — .git credentials* — HAZARD (the known line Playwright spec) 2. tests/security test_jackett_autoconfig_secrets.py — .gitignore:51 secrets — HAZARD, NAMED IN THIS ITEM WHEN FILE Conductor-verified: matched by :51, c tracked. It is a 113-line SECURITY / PR asserting no credential value reaches body, traceback, or log. Losing it silen remove the test that guards §11.4.10 all glob's own purpose. That is the sh instance available: the rule protectin credentials is one refactor away from the test that proves credentials are p submodules/jackett — .gitignore:260 hazard: mode 160000 gitlink, and tha documented as deliberately inert for

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					CodeGraph per §11.4.79). THE MECH DECIDES THE FIX: the directory nega re-includes the DIRECTORY ONLY. A n frontend/src/app/jackett/credentials/ credentials.guard.ts is STILL swallow because <i>credentials</i> contains no slash therefore BASENAME-scoped — the a directory buys nothing for new files. safe files, 124 are held by ONE robust negation (!docs/qa//.log) and 13 by fi hand-maintained per-file entries (currently live, none stale — but ea future silent loss). TASK 1b — ALR SWALLOWED UNTRACKED FILES: . ignored+untracked paths. Two are losses (the tracker-credentials exp and the BOB-124 .txt evidence — fil own item); set_password.py is reco UNKNOWN: provenance and delib NOT called lost work; download-p qbittorrent_creds.json is the POSIT CONTROL — shape-inspected keys- (never values) as [password, usern genuinely credential-bearing, COR ignored. TASK 2 — MEASURED IN A TREE, 10 source paths x 15 secret p baseline (full 316-line file) swallow 0 (a) EXACTLY AS THIS ITEM WOR swallows 0 leaks 3 (a) repaired t those 3 swallows 1 leaks 1 (b) der unchanged + loud gate swallows 0 (a) LEAKS download-proxy/ qbittorrent_creds.json — A REAL CREDENTIAL FILE SITTING IN THE TODAY — because credentials.json match “creds”. It also leaks my_pa and service_credentials. Repairing leaves service_credentials: an exte scoped deny cannot cover EXTENS secret files without collapsing bac deny-all it was meant to replace. S

WHY §11.4.252 VIOLATION: this is a cre selection decision on a path that performs remote mutation and exter effects. §11.4.252 requires a path >=2 dangerous capabilities to FAIL verify every precondition, refuse unverifiable, and name the unresol precondition. Silently substitutin credential MECHANISM for an unread

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					declaration is the textbook fail-o the operator's intent was not dete the code proceeded anyway using a may not have chosen. WHY NO GATE three independent reasons, each su its own – (a) cmd/boba-ctl is in n DANGER_ROOT (BOB-205); (b) even in files are structurally unanalysabl current gate (BOB-191); (c) this s semantic default-branch decision, the two text patterns the non-Pyth match. It was found by a human-equ read, which is precisely the §11.4 class. HONEST QUALIFICATION (§11. boba-ctl/main.go has NO_ = err, NO = nil {}, and NO silentreturn nil toda verified with a control needle aga qBitTorrent-go/internal/config/con This finding is the exception, not many; the scope hole around boba-c otherwise LATENT (it hides nothing it guarantees a future one lands u ACCEPTANCE: (1) an unrecognised/em value REFUSES with an error naming offending key and its declared val silently defaults; (2) a RED driv auth: and asserting today's silent resolution, flipping to refusal po golden-FALSE proving every LEGITIM value still resolves correctly – a refusal here would break real depl (§11.4.201(1)). DISCOVERY CHANNEL (§11.4.238): found by the BOB-205 verification stream while confirmi qualifies as a §11.4.252 surface. major Fixed (→ Fixed.md) Bug BOB-216 – WHAT: three carrier clas the gate's PRIMARY mode, not only degraded text fallback. Measured a text_rc=1 (both modes report the h COMMENT or DOCSTRING quoting the c

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					anti-pattern is reported as a LIVE default – both spellings; (b) a / or a string constant holdingtry { X { } }is reported as an empty catch, o carrier line. Shape (b), and the C half of shape (a), are LANGUAGE-AG GREPS with NO structural counterpa mode – so there is no parser to be WHY IT MATTERS: the gate's header blanket claim that "A parser is im both by construction". That is OVE now corrected in place, scoped to Try/With shapes where it is actual Everything else – every non-Python and the credential/empty-catch tex even on Python – has no AST arm at the immunity never applied there. §11.4.201(1) false refusal in the mode is materially worse than one fallback nobody expects to be exac refuses provably-healthy code on t gate is trusted on. THE CONTROL N SHARPENS IT (recorded so the next inherits the measurement): a #-COM import does NOT poison the licensi (text=0), because those regexes ar anchored. So the blindness is to S specifically, not to non-code gene distinction is what makes the comm fix tractable for one class and no others. WHY IT WAS NOT FIXED IN T THAT FOUND IT (§11.4.6 honest boun this is the right call): closing t a PER-LANGUAGE comment-and-string across every configured extension. model's failure direction is the U reporting one – a mis-parsed strin silently swallows real violations remainder of the file. The same re made the round DECLINE the triple-counter for OVER-1 while ACCEPTING

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					comment strip for OVER-A: the comm ambiguity resolves toward KEEPING (proven by three control needles – violation + comment, # inside a st escaped quote before # – all 1/1), fence counter's ambiguity resolves DROPPING text. Direction of failure difficulty, is the discriminator. full lexer here would import the reporting failure mode this gate r everywhere else. OPERATOR DECISION (§11.4.66 / §11.4.197): whether to language comment-and-string models consumer call, not a default this pick unilaterally. Options: (a) ac over-reports and DISCLOSE them per (what the round did – a new MODE-I CARRIERS section now enumerates al (b) build the models per language under-report risk with a fixture p language; (c) narrow the language-greps so they only fire where a st arm exists, trading coverage for p RELATION TO SIBLINGS (§11.4.214 di similar, deliberately not merged): the gate flagging a fail-CLOSED SS a semantic-role miss in the PYTHON is a CARRIER miss (comment/string code) that is MODE-INDEPENDENT. BO language absent from the ext list All three share the primitive §11. in BOB-191: classify by local synt shape, never consult semantic role fixes differ, so the items stay se ACCEPTANCE: (1) the operator decis is taken and recorded; (2) whichever chosen, each of the three classes fixture proving current behaviour, future change cannot silently alte if (b) is chosen, a golden-FALSE p proving a REAL violation adjacent

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					carrier is still caught – the under guard, which is the whole risk. D CHANNEL (§11.4.238): found by the round-7 remediation stream while c different finding, NOT by the auto regime and NOT by the independent that audited the same file in round 171 critical Fixed (→ Fixed.md BOB-217 – WHAT: tools/plugin_update_automation.py update combines three §11.4.252 dangerous capabilities and is gated by nothing could stop a hostile payload: - U INPUT: 14 URLs across four GitHub repositories, THREE of which are t PERSONAL repos, not the official q organisation. - MUTATION: writes <name>.py. - DEFERRED CODE EXECUT qBittorrent EXECUTES those engine bytes fetched over the network bec code on the operator's host. The 0 validation is compile(content, "<s "exec") at tools/plugin_update_automation.py:213 – verified as the sole compile call. SYNTAX check. A syntactically vali exactly what a hostile payload is. NO signature verification, NO pinn SHA, NO hash allowlist, NO provena of any kind. §11.4.252 requires a combining >=2 dangerous capabiliti CLOSED – verify every precondition when any is unverifiable. This pat THREE and verifies none of them. § supply-chain clause is the direct counterpart: dependencies are eith hash-verified, provenance-attested mirrored through a hash-pinning re unattested public source is an int risk, and here the unattested publ becomes EXECUTED CODE. THE SHARPE

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					ABOUT THIS FINDING: the fail-close produced THREE FALSE POSITIVES in file (:189, :198, :215 – all triag POSITIVE, see BOB-214's correction MISSING this, the one genuine dang combination in it. That is the §11 both-directions failure – false-po false-negative – demonstrated insi file. It is the strongest availabl that the detector classifies by lo syntactic shape and never consults role (the §11.4.250 primitive name BOB-191/BOB-216). REACHABILITY, S HONESTLY (§11.4.6): the script is NOTHING – control-needle-proven (9 hits, 0 negative control) it is re only by its own README, its own do and a tracker note; zero hits acro *.yaml / *.py / Makefile outside to own README self-declares "not invo normal start/stop flow". Last func commit 2026-04-12. So this is NOT automated path. It IS reachable by --update, which is exactly what th exists for. Severity is Critical o capability combination, bounded by reachability – not on an active ex path. ACCEPTANCE: (1) plugin sour pinned (commit SHA or content hash verified before write; (2) an unve source REFUSES and names which che (§11.4.252) rather than proceeding syntax pass; (3) the compile() cal documented in-source as a syntax c is NOT a safety gate, so nobody re one; (4) a RED serving a syntactic hostile payload and asserting it i pre-fix-absent / post-fix-present; golden-FALSE proving a legitimate update still succeeds (§11.4.201(1 DISCOVERY CHANNEL (§11.4.238): fou

					concealed-hits triage stream while establishing that the gate's four this area were false positives. No automated QA regime – and the regi pointed here reported the wrong th 172 major Fixed (→ Fixed.m – BOB-218 – WHAT: tools/README.m "the backup is restored" on valida failure. Conductor-verified: shuti appears EXACTLY ONCE in tools/ plugin_update_automation.py and co FORWARD only – a reverse-direction has ZERO occurrences (grep control proven seeing: needle 2 hits, nega control 0). The plugin write opens "w", which TRUNCATES IMMEDIATELY. OBSERVABLE HARM (the reason this i merely a doc defect): a failure pa through the write leaves a TRUNCAT IMPORTABLE plugin on disk. The ope told the update FAILED and reasona concludes the previous file surviv because the README says it was res was not. The next ./install-plugin the corrupt file into config/qBitt nova3/engines/ and that search eng SILENTLY STOPS WORKING. The .bak n recover DOES exist on disk; the to mentions it and never uses it. Th §11.4 documentation-layer bluff wi downstream consequence: the doc as safety property the code does not and the operator's recovery decisi on that false assertion. SECOND, DIVERGENCE: the README claims JSON stdout; :274 writes it to a FILE (open(args.output, "w")). THIRD, MINOR DEFECT in the same file (rec rather than as its own item becaus the file and the fix window): _extract_version at ~:198 uses a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					BAREexcept:, so a Ctrl-C during the sweep is SWALLOWED. That is a sign defect, not a fail-open – the gate this line, but for the wrong reason the silent default return; the reason the bare except catching KeyboardInterrupt ACCEPTANCE: (1) either the rollback IMPLEMENTED (restore the .bak on failure the README claim is DELETED – the code must agree (§11.4.6); if implemented write to a temp file and rename at rather than truncating in place; (2) stdout-vs-file claim corrected; (3) except narrowed so KeyboardInterrupt propagates; (4) a RED that fails to mid-way and asserts the previous path intact (post-fix) / truncated (pre-fix) REACHABILITY: same as the sibling, hand-run only, not in any automated last functional commit 2026-04-12. Major on the harm shape, bounded by reachability. DISCOVERY CHANNEL (found by the concealed-hits triage Not by the automated QA regime. minor Fixed (→ Fixed.md) Bug BOB-220 – WHAT: scripts/ownership_repair.sh:891-895 runs code intending to strip setuid/setgid bits live: the chmod RUNS and SUCCEEDS, mode stays 2755. Root cause measured chmod with a 3-DIGIT symbolic-equivalent octal PRESERVES the setgid bit on DIRECTORIES; only a 4-digit form (or an explicit g-s clears it. The commit :868-884 describes a strip that does occur for directories. EFFECT: be – the surviving setgid bit is not harmful, and no defect is known to from it. This is filed as a §11.4. defect: an in-source comment asserts behaviour the code does not perform

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					matters because the next reader will find it, and because a future security strip written against the same patch will silently fail the same way. RELAT BOB-207: the same stream measured repair a new file inherits gid 100 SETGID BIT STILL SET – the two factors compound. If BOB-207 is resolved by the repair (the recommended direct setgid survival becomes moot for that but the misleading comment remains ACCEPTANCE: (1) either the strip is (00755 or g-s) or the comment is correct state that directories retain setgid and comment must agree; (2) if made RED asserting mode 2755 -> 0755 on directory, since the current form no-ops; (3) golden-FALSE proving a that SHOULD keep its mode is not g changed. DISCOVERY CHANNEL (§11.4 found by the BOB-207 stream while unrelated behaviour. Not by the au regime. 174 critical Fixed Fixed.md) Bug – BOB-221 – WH scripts/pre_build_verification.sh 30 (CM-BASH-UNIT-TESTS-EXECUTED) e suites by FILESYSTEM GLOB (:1196) fail() on any non-zero exit. It th RUNS untracked suites, and it has of a test that is SUPPOSED to fail MEASURED: tests/pre_build/ test_bob205_danger_roots_scope.sh correctly, because it is a RED tes BOB-205, an unfixed defect. Invari counts that as a gate failure. The T042 verdict is FAIL, and this is three blocking causes. THE STRUCT PROBLEM: §11.4.115 and §11.4.224 R RED authored FIRST and OBSERVED TO before the fix exists. §11.4.135 r RED to persist as the permanent re

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					guard. So the discipline mandates failing tests exist in the tree be authoring and fixing – and the blo treats their existence as a defect the constitution correctly makes t refuse the commit. That is a §11.4 seam problem: the gate asserts "no fails" when the invariant it shoul "no suite fails UNEXPECTEDLY". WH SURFACED NOW: this session authore across parallel streams (BOB-204, BOB-207, BOB-212) – the first time discipline was applied at this vol Previously REDs were flipped GREEN same round, so the window never sp gate run. The defect is not new; t is. THE FORBIDDEN RESPONSES (§11. NOT delete the RED to make the gat NOT weaken invariant 30 to ignore do NOT mark the RED skipped withou reason. Each converts a real signa silence. FIX DIRECTION – this is quarantine mechanism, which the co already specifies and this project wired: a RED declares its expected status and its tracked item (a hea a naming convention, or a manifest invariant 30 reads that declaratio declared-RED failure is reported a (not a fail) while an UNDECLARED f still blocks. Crucially the declar EXPIRE or be tracked – §11.4.248 p quarantine with a stabilisation de precisely so "expected to fail" ca permanent cover. A RED whose item flip GREEN or the gate should FAIL stale declaration. ACCEPTANCE: (1 declared RED does not block; (2) a UNDECLARED failing suite still blo §11.4.201(1) guard – a fix that ig failures is strictly worse than th

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					(3) a declared RED whose tracked i CLOSED blocks, so declarations can (4) a paired §1.1 mutation removin declaration-check makes the gate a undeclared failure -> gate FAILs. CHANNEL (§11.4.238): found by the readiness preflight, before the en rather than during it. Not by the QA regime – the regime IS the thin would have blocked. === CORRECTED – MY FIX DIRECTION IN THIS ITEM WA AND THE BLOCKER IS WIDER (§11.4.6) CORRECTION 1 – §11.4.248 IS NOT TH MECHANISM. I wrote "this is §11.4. quarantine mechanism, which the co already specifies and this project wired." That is half right and the matters. §11.4.248(A) QUARANTINE t FLAKY tests – its trigger is liter consecutive-run-different-verdict after-red", and its remedy is to M suite to tests/quarantine/ and run blocking suite WITHOUT it "so gree green". §11.4.248(B) PROTECTED-SPE plus a required-reviewer gate on M regression test; it never says a t fail. A RED is DETERMINISTIC and M BE RUN – §11.4.115(F) and §11.4.22 the RED verdict to be PRODUCED as evidence. Excluding it destroys th artifact the discipline mandates. I two would also let a genuinely fla hide behind a RED declaration and What §11.4.248 legitimately suppli what should be INHERITED rather th invented (§11.4.227), is the SHAPE list + a tracked item + a deadline only-shrink ratchet. CORRECTION 2 A LANGUAGE-PARITY GAP, NOT A DESIG Conductor-verified: the project AL this mechanism on the PYTHON side.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					pytest.mark.xfail(strict=True) is deliberately for OPEN defects at t scaling/test_scaling_envelope.py:9 (BOB-167, documented in tests/scal README.md:64) and tests/stress/ test_plugin_parsers_stress_chaos.p whose own comments carry the ratch discipline verbatim ("it stays vis xfailed in every report", "then re xfail"). So "declared expected-fai strict so an unexpected pass fails ALREADY accepted policy in one lan BASH side has no equivalent. That gap. CORRECTION 3 – BOB-221 IS NO SUFFICIENT TO UNBLOCK T042. A full replication of invariant 30 measur FAILED=4 SKIPPED=2: rc=124 300s test_compute_badges_carrier_match. HANG, not a RED. Blocks independen separately. rc=1 3s test_ownership_gid_agreement.sh BOB-207's RED (a SECOND in-glob RE item assumed one) rc=1 1s test_bob205_danger_roots_scope.sh BOB-205's RED rc=127 9s test_check_cm_lan_routes_authentic CONTAMINATED: a sibling stream was lan_route_auth_analyzer.py during the run (§11.4.119 – the surveying not own that resource and correctl to adjudicate). rc=127 is the §11. internal FAIL-bluff signature, not verdict either way. Returned to it stream. ALSO: BOB-204's and BOB-21 share tests/security/ test_gitignore_swallow_is_loud.sh, OUTSIDE invariant 30's glob and ex NOTHING (BOB-222) – they do not bl and widening the glob would immedi another blocker. THE DESIGN, RECO two-place declaration + SSoT expir

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					semantics. THREE independent facts before a failure is excused – (1) is listed in scripts/lib/expected_ file the PRODUCING streams do not the suite file itself carries# EXP RED:with the SAME id; (3) <ID> is docs/workable_items.db, FAIL-CLOSE unreadable store or unknown id (§1 Plus STRICT-XFAIL PARITY: a declar that PASSES blocks, which mechanic the ratchet to shrink in the same the fix. EXIT-CODE CONVENTION REJ MEASURED EVIDENCE – and I had flag promising. The non-{0,1} exit spac ALREADY CLAIMED IN THIS REPO FOR T MEANING: test_gitignore_swallow_is uses exit 2 = "INSTRUMENT BROKEN o LEAK – verdict void", and test_bob205_danger_roots_scope.sh = ABORT (instrument blind). Both w precisely so a blind harness can n read as a verdict. Overloading eit "expected red" would make a genuin INSTRUMENT INDISTINGUISHABLE FROM RED – the gate would swallow exact failure class those codes exist to It also fails acceptance (4) (an i carries no item id) and (3) (nothi check), and it puts the declaratio the PRODUCER, collapsing producer! (§11.4.240/§11.4.249). HONEST BOU THE DESIGN (§11.4.240): it achieve separation by LOCATION and MULTI-P AGREEMENT, not by true CAPABILITY, §11.4.240 prefers. There is no PR/ seam here to enforce capability – Hard Stop #1 removed all CI/PR gat CODEOWNERS half of §11.4.248(B) is STRUCTURALLY UNENFORCEABLE in this What the design buys is that silen failure requires a coherent three-

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					visible in a diff, instead of one line. THE RED: tests/pre_build/test_bob221_expected_red_declarati extracts invariant 30's loop and i predicate VERBATIM FROM THE LIVE G CONTENT MARKER (never line number) them against a hermetic scratch PR – so the logic under test is the g text, not a paraphrase (§11.4.226 Measured RED: 3 of 5 properties un 1. P3 is asserted on the blocking merely on "it blocked" – today eve blocks, so a bare did-it-block che pass FOR THE WRONG REASON and keep the anti-rot half were never built flip proven with the BYTE-IDENTICA against a sandbox carrying the pat all five properties met. Four pair mutations each kill exactly ONE pr one-to-one, no cross-talk. THE PA lines, 4 hunks + one new file scri expected_red.sh,git apply –checkcle APPLIED. Operational note the land must not miss: the table names test_bob205_danger_roots_scope.sh test_ownership_gid_agreement.sh, b carries an# EXPECTED-RED:` marker (verified 0 in both) — without those t additions the gate blocks them with” but the file carries no matching mark is the fail-closed design working as in a bug. SEQUENCING RECOMMENDAT bounded variant of (i) — land the me declaring exactly BOB-205, BOB-207 a item’s own suite, add the two missing triage the rc=124 hang as its own iter the rc=127 to its owner, THEN run T0 HONEST COST, STATED NOT HIDDEN modifies the blocking gate BEFORE th ever run clean, so the mechanism’s fi exercise IS the T042 run. The circular

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
175	major	Fixed (→ Fixed.md)	Bug	—	unavoidable and IS this item (§11.4.1 whose precondition is produced by the gates): a clean T042 run is impossible if RED exists, so “validate the gate before it” cannot be satisfied. Risk reduced as possible without running the gate (pro applicable patch, proven polarity flipping mutations, P2 undeclared-failure block asserted and mutation-proven) eliminated. Against (ii) fix-the-four-d all four are Queued and genuinely de BOB-212’s fix direction is an explicit unresolved §11.4.66 OPERATOR decision own test was deliberately written fix agnostic so as not to prejudge it — change means making that decision on the other behalf, plus four implementations are reviews, and it STILL leaves the hang rc=127 blocking. RECURSION NOTE: the own RED is in-glob and failing, so it is blocker until the mechanism lands — point its already-present marker and clear it. The mechanism is its own fix BOB-222 — WHAT: scripts/pre_build_verification.sh:1196 enum suites with a glob covering EXACTLY directories: “\${PROJECT_ROOT}”/tests/test_*.sh · “\${PROJECT_ROOT}”/tests/pre_build_verification.sh · “\${PROJECT_ROOT}”/tests/pre_build_verification.sh tests/security/ is NOT among Conductor-verified verbatim. So tests test_gitignore_swallow_is_loud.sh — authored this session with a golden-H proving real secrets stay ignored — is by NOTHING. It is a guard that guards and its silence is indistinguishable from THIS IS THE THIRD OCCURRENCE OF CLASS. The driver’s OWN comment also records the history: the same defect existed for tests/pre_build/test_*.sh”

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					fixed by adding that directory to the recurring one directory over (tests/hom the same way. Now tests/security. Each new glob entry; none addressed why directory is invisible by default. §11.4 APPLIES DIRECTLY: three symptoms, primitive. The primitive is a hand-ma enumeration that must be edited in l with the tree, whose failure mode is the identical shape as BOB-205's DANGER_ROOTS and BOB-212's .gitig allowlist — three separate hand-main in this repo, all three measured to ha missed something. Adding tests/secur glob would be the fourth instance of NOTE THE GATE ALREADY HAS THE INSTINCT at :1220: it fails when the g matches NOTHING (“the glob is blind guard catches a TOTALLY blind glob PARTIALLY blind one — the more co more dangerous case, because a part glob still reports a healthy count. FIX DIRECTION (§11.4.251 role-as-data-p the suite set from the tree — every te test_*.sh — minus a DECLARED §11.4 exclusion fence with a justification p Then a new test directory cannot be and a deliberate exclusion is visible a reasoned. If a hand list is kept, the o guard is the same computation, so th derivation must be built either way. ACCEPTANCE: (1) tests/security suites (2) a NEWLY CREATED tests//test_x.sh up with no hand edit — that is the in stops the recurrence, and without it t the fourth patch; (3) a RED creating s directory and asserting it runs; (4) th blind-glob guard is extended to catch blindness, not only total. DISCOVERY (§11.4.238): found by the T042 readin preflight. Not by the automated QA r

177	major	Fixed (→ Fixed.md)	Bug	—	hypothesis tested, not the last. The countermeasure is documented: redi watchdog subshell fds away from the pipe, or have the probe write to a file assume that is the cause; it is the high hypothesis given the recorded preced ACCEPTANCE: (1) the wedge point is with captured evidence, not inferred suite completes deterministically we budget; (3) a RED reproducing the ha regression cannot silently re-wedge (based assertion, since the failure IS t duration); (4) NOT closed by a declar raising the timeout — raising the buo FILE DATE: the suite is dated 2026-08 hang predates this session. DISCOVER CHANNEL (§11.4.238): found by the E design stream while surveying invar more widely than its brief required – preflight had verified only 3 of 38 sui stated that boundary honestly, which prompted the wider survey. BOB-225 — WHAT, conductor- verified: .gitignore:266 ignores *.docx The §11.4.65 export pipeline GENERA twins — the workable-items export p Issues.docx / Fixed.docx / Issues_Sum Fixed_Summary.docx, and the doc ex produced docs/scripts/ check_cm_lan_routes_authenticated. round 9. Every one of them is untrac construction: they exist on disk, git w see them, and no gate can notice bec absence is silent. WHY THIS IS THE E CLASS, NOT A DUPLICATE OF IT: BOB deny-all glob plus a hand-maintained ALLOWLIST, where new files leak thr gaps in the list. This is a deny-all glob allowlist at all for a file type the proje MANDATES producing. The mechan

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					the false-null is identical — git status so the exporter appears to succeed and artifact appears to exist. It is filed sep §11.4.214 (distinct-but-similar), with and BOB-219 as siblings. THE TENSIO RESOLVE HONESTLY: §11.4.153 man FOUR-format export (HTML + PDF + 1 its document class, and §11.4.65 gave twins generally. So the constitution r producing an artifact the repository configured to refuse. One of the two and the resolution is an operator dec (§11.4.66): (a) the .docx mandate app and the glob must carve out generate twins; (b) .docx is deliberately untrack heavy binary derivative regenerable §11.4.77 from its .md, in which case t EXPORTERS should stop producing it produce it into an explicitly untracked and the §11.4.153 four-format require should be recorded as consciously no rather than silently unmet. What is N acceptable is the present state: gener ignore it, and let both the mandate appear satisfied. MEASURED SCOPE (CORRECTED — my first write of this ‘tracked .docx files = 0’, which is FALS recorded here per §11.4.6 rather than amended): 2 .docx files ARE tracked and exist repo-wide, so 1138 are untracked ignored. (A second correction, also re rather than amended: my first correct 344, which counted only the docs/ su numeric errors in a row on one item pattern is that each was measured w narrower instrument than the claim supported, which is the §11.4.201(7)(part-of-the-instrument failure applie own reporting.) AND THE TWO SURV THE INTERESTING PART: they are do Status.docx and docs/features/

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					Status_Summary.docx — precisely the §11.4.153 explicitly mandates as a FC export. So the only two DOCX artifacts we see are the two a specific anchor name they survive not by rule but because they already in the index. That makes this condition, not a total one, and the two are the interesting part — they are in position as frontend/e2e/credentials. under BOB-212: alive only because they already in the index, since git honours over .gitignore for tracked paths. One and-re-add, one file move, and they v silently like any other. So the state is a clean ‘we never track docx’: it is an inconsistent one where two artifacts prove the format IS tracked while 34 not. ACCEPTANCE: (1) the operator does above is taken and recorded; (2) when the exporter and the ignore rule AGR if .docx is not tracked, nothing should generate one into a tracked doc directly carved out, a check that a generated actually trackable, so this cannot record (4) §11.4.153 compliance is either met recorded as an honest gap, never left failing. DISCOVERY CHANNEL (§11.4. by the BOB-102 round-9 remediation when it regenerated its own guide two noticed the .docx could not be added automated QA regime — and the reg see it, which is the point. BOB-227 — WHAT: three of the four the CM-LAN-ROUTES-AUTHENTICATED build gate are untracked in git. MEAS 2026-08-27 with git ls-files --error-un control-needed against a known-trac scripts/pre_build/lan_route_auth_an UNTRACKED, scripts/pre_build/ check_cm_lan_routes_authenticated.
