## BOB-192 — remediation evidence for the 10 ratcheted CM-NO-FAIL-OPEN-SKIP findings

Revision: 1 Last modified: 2026-09-23T17:19:25Z

| Field          | Value                                                                                                                                        |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Item           | BOB-192 (NOT closed by this document — tracker status is the caller's decision)                                                              |
| Base HEAD      | 3528ef2 (working-tree change, not committed)                                                                                                 |
| Gate           | bash scripts/pre_build/<br>check_cm_no_fail_open_skip.sh                                                                                     |
| RED/GREEN test | tests/unit/<br>test_bob192_fail_open_skip_remediation.py<br>(20 cases, local http.server fixtures on ephemeral ports — never the live stack) |

### 1. What was wrong

Each of the 10 baseline rows was a live-stack test helper that turned evidence the host ANSWERED into a SKIP (HTTP  $\geq 400$ , a non-health body, an empty result set, a non-terminal search status, or an answered error swallowed by a `URLError/RequestException` handler). A skip reads green, so the product failure was invisible (§11.4.69).

## 2. Fix shape (per file)

| File / helper                                                        | Before                                                                                              | After                                                                                             |
|----------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| test_jackett_autoconfig_real.py jackett_ready                        | skip on >=500; skip on any<br>RequestException (incl. answered TooManyRedirects)                    | skip ONLY on requests.ConnectionTimeout; FAIL if answered >=500; answered trace errors propagated |
| test_merge_api.py _qbit_login                                        | skip when qBittorrent answered but refused admin/ admin                                             | FAIL (admin/ project contr reachability by the qbit_u                                             |
| test_merge_api.py<br>test_download_magnet_added_to_real_qbittorrent  | skip when status != "initiated"                                                                     | assert                                                                                            |
| test_merge_api.py<br>test_search_finds_real_results_for_common_query | skip on answered empty result set                                                                   | assert (same as test_button                                                                       |
| test_tracker_auth_live.py _merge_service_required                    | skip on status>=400, on body lacking "status", and inside except URLError (HTTPError is a subclass) | environment connect prob timeout -> SK HTTPError / status != heal                                 |
| test_tracker_auth_live.py _run_live_search                           | skip when search never terminated; answered poll 5xx swallowed as “torn read”                       | FAIL on dead HTTPError -> immediately HTTP transp polling                                         |
| tests/scaling/test_boba_scaling.py _services_up                      | skip when boba-jackett /healthz not 200                                                             | TCP-port gate (env-derived) answered un healthz -> FA                                             |

Golden-FALSE guard (§11.4.201(1)): the unit file also proves a genuinely unreachable endpoint (closed port -> connection refused) still SKIPS for jackett\_ready, \_merge\_service\_required and \_services\_up, and healthy answers pass through.

### 3. RED — against the pre-fix helpers (13 failed / 7 passed)

```

## 5. Finding SET — before / after

Before (baseline rows, identical to --list before the change):

```

tests/integration/
test_jackett_autoconfig_real.py:jackett_ready:STATUS#1
tests/integration/
test_jackett_autoconfig_real.py:jackett_ready:UNREACH#1
tests/integration/
test_merge_api.py:TestDownloadEndpoint.test_download_magnet_added_1
tests/integration/
test_merge_api.py:TestSearchEndpoint.test_search_finds_real_results
tests/integration/test_merge_api.py:_qbit_login:STATUS#1
tests/integration/
test_tracker_auth_live.py:_merge_service_required:EMPTY#1
tests/integration/
test_tracker_auth_live.py:_merge_service_required:STATUS#1
tests/integration/
test_tracker_auth_live.py:_merge_service_required:UNREACH#1
tests/integration/
test_tracker_auth_live.py:_run_live_search:EMPTY#1
tests/scaling/test_boba_scaling.py:_services_up:EMPTY#1

```

After (check\_cm\_no\_fail\_open\_skip.sh --list): **empty set** (the command printed nothing, rc=0).

Gate run with the fix applied but the OLD baseline still in place — all 10 rows reported STALE, proving each finding is gone by KEY (set comparison, not count):

```
STALE: tests/integration/
test_jackett_autoconfig_real.py:jackett_ready:STATUS#1 – no live
finding; remove the row (the ratchet must tighten, §11.4.227(A))
STALE: tests/integration/
test_jackett_autoconfig_real.py:jackett_ready:UNREACH#1 – no live
finding; remove the row (the ratchet must tighten, §11.4.227(A))
STALE: tests/integration/
test_merge_api.py:TestDownloadEndpoint.test_download_magnet_added_1
– no live finding; remove the row (the ratchet must tighten,
§11.4.227(A))
STALE: tests/integration/
test_merge_api.py:TestSearchEndpoint.test_search_finds_real_results
– no live finding; remove the row (the ratchet must tighten,
§11.4.227(A))
STALE: tests/integration/test_merge_api.py:_qbit_login:STATUS#1 –
no live finding; remove the row (the ratchet must tighten,
§11.4.227(A))
STALE: tests/integration/
test_tracker_auth_live.py:_merge_service_required:EMPTY#1 – no
live finding; remove the row (the ratchet must tighten,
§11.4.227(A))
STALE: tests/integration/
test_tracker_auth_live.py:_merge_service_required:STATUS#1 – no
live finding; remove the row (the ratchet must tighten,
§11.4.227(A))
STALE: tests/integration/
test_tracker_auth_live.py:_merge_service_required:UNREACH#1 – no
live finding; remove the row (the ratchet must tighten,
§11.4.227(A))
STALE: tests/integration/
test_tracker_auth_live.py:_run_live_search:EMPTY#1 – no live
finding; remove the row (the ratchet must tighten, §11.4.227(A))
STALE: tests/scaling/test_boba_scaling.py:_services_up:EMPTY#1 –
no live finding; remove the row (the ratchet must tighten,
§11.4.227(A))
FAIL: CM-NO-FAIL-OPEN-SKIP: 0 finding(s) (0 baselined, 0 new, 10
stale) across 414 test files, 61 skip sites; control-needle: seen
rc=1
```

Gate run after removing the 10 rows in the same change (baseline now holds zero keys):

```
PASS: CM-NO-FAIL-OPEN-SKIP: 0 finding(s) (0 baselined, 0 new, 0
stale) across 414 test files, 61 skip sites; control-needle: seen
rc=0
```

The zero is not a blind zero: control-needle: seen and 61 skip sites scanned across 414 test files (§11.4.201(6)).

## 6. Live stack run of the affected files (stack untouched, running on 7185-7189/9117)

===== 12 failed, 14 passed in 119.81s (0:01:59)
=====

```

Every remediated helper ran on the live stack and passed through (jackett\_ready, \_qbit\_login, \_merge\_service\_required, \_run\_live\_search and the empty-result search assertion all reached their test bodies).

None of the 12 failures is produced by a remediated helper; they were already failing (or would have) at HEAD and are reported, not re-skipped:

1. **10 x HTTP 401 in test\_merge\_api.py** (TestHooksEndpoint x5, TestMagnetEndpoint x3, TestDownloadEndpoint x2): the live merge service has BOBA\_API\_TOKEN set (routes.py token dependency answers 401 "Unauthorized: valid API token required"; confirmed with `curl -X POST /api/v1/magnet -> 401`) and the integration file sends no token. Each failing assertion (`resp.status_code == 200/400/404/422`) precedes any line this change touched, so HEAD fails identically. UNTRACKED: needs its own item (the test must carry the token from the environment, or skip with an honest BOBA\_API\_TOKEN-derived reason).
2. **test\_private\_tracker\_credentials\_authenticate[kinozal]:**  
`authenticated=False, status='empty', error=''` — the test body's genuine credential verdict (not a helper). A real finding, UNTRACKED in docs/Issues.md.
3. **test\_private\_tracker\_credentials\_authenticate[rutracker]:**  
`authenticated=True, status='error', upstream 403 bot-protection challenge` — the known BOB-172 defect.

Scaling gate (`_services_up`) was exercised live directly (the scaling module itself was NOT run: it writes the committed docs/qa/BOB-109 corpus):

`live _services_up` gate returned None (no skip, no fail) against 7189/9117

Related meta-test still green (tests/unit/test\_no\_runtime\_service\_skips.py): 7 passed. ruff check on the 5 files: clean.

## 7. Open item created by this change (outside the allowed file scope)

tests/pre\_build/test\_check\_cm\_no\_fail\_open\_skip.sh **case 9** hard-codes that the BOB-192 rows are still present (`grep -qF 'tests/integration/test_tracker_auth_live.py:_merge_service_required:'` baseline). With the baseline now correctly empty it reports FAIL: case 9: expected rc=0 on the real tree; got rc=0 ... (the

gate itself is rc=0; only the pinned-debt grep fails). That self-test must be updated to assert the empty SET in the same commit as this change; it was outside this task's permitted files, so it is left for the caller.
