125	High	Fixed (→ Fixed.md)	Bug	—	BOB-158 — tests/conftest.py cannot r production interpreter: binds asyncio.events._get_event_loop_policy private API, while production is 3.12.
126	Medium	Completed (→ Fixed.md)	Task	—	BOB-160 — Reported-Via: §11.4.202 directive task on 2026-08-21T19:02:4 Reported-By: AI What (the report, v Independent §11.4.209 review (IMPO found two of the feature’s strongest a checks were never executed by any r tests/ownership/ test_container_writes_owned_files.py §11.4.115 RED-turned-regression-gua FR-011/FR-007, proven via a docker- compose.yml revert mutation — was of tests/integration/ (commit 58d340a an autouse fixture hang) but no runn test.sh, run-all-tests.sh) was ever exte cover tests/ownership/. (2) tests/pre_ test_.sh, the §1.1 paired-mutation met the scripts/pre_build/check_cm_.sh ga was executed by NOTHING — self-rep honestly in commit 04742d7’s own m (‘STILL OPEN (reported, not fixed): te pre_build/ is executed by NOTHING’) tracked as a workable item (a §11.4.1 requirements gap) and never wired i pre_build_verification.sh invariant 3 globbed only tests/unit/test_.sh. Affec file-scope manifest: ci.sh; scripts/ pre_build_verification.sh invariant 30 UNIT-TESTS-EXECUTED) Reproducti context: grep -rn test_container_writes_owned_files ci.s run-all-tests.sh scripts/ returned zero (only docs/specs mentioned the path);

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					<i>scripts/pre_build_verification.sh</i> shows 30's for-loop globbing only tests/unit/t never tests/pre_build/test_.sh. Acceptance criteria: <i>ci.sh</i> gains a runtime-gated ownership/ stage (skips honestly, rc=0 if podman/docker present); <i>scripts/pre_build_verification.sh</i> invariant 30 covers both tests/unit/test_.sh and tests/pre_build/test_*.sh, verified by an external standalone run of the invariant's example reporting a non-zero RAN count that includes files from both directories. BOB-163 — OPERATOR DECISION (2023 §11.4.66 interactive clarification): YES. IS RESPONSIVE IF Retry-After IS WELL-FORMED A 429 carrying a VALID Retry-After header counts as the sibling endpoint being RESPONSIVE. Assertion (c) of the DDG accepts 2xx OR a well-formed 429 (positive integer seconds or valid HTTP-date — not merely present/non-empty). DEGRADATION remains: connection failure, timeout, and a 429 with absent or malformed Retry-After. RESIDUAL RISK, accepted knowingly, is stated in the script source per §11.4.66 genuinely wedged endpoint that happens to answer 429-with-Retry-After would pass. Retry-After parse narrows that window, but not close it. Options (b) limiter-aware and (c) exempt healthz probe were both chosen, NOT chosen. STILL OPEN, not covered by the decision: the detector counts 429 only if though the script header says '429 (or equivalent)'; counting 503 would collapse the crash detector's 5xx tally. Decide BOB-111 lands limiters on :7185 and the answer is recorded as consumer DATA §11.4.35 — it is the operator's stated choice, an agent inference, and supersedes a previous agent-chosen default on this question.
127	Medium	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					not chosen are named above so a future call does not re-litigate a settled call (§11.4.202 bounded-verdict discipline applied to the call — prior item text follows — Reported-By: §11.4.202 reporting directive bug on 2026-08-21T19:41:08Z Reported-By: remediation, pre-existing defect surfaced by BOB-111 landing a real limiter What report, verbatim): PRE-EXISTING, NOT INTRODUCED – and proven so rather than asserted: git diff shows assertion (c) is IDENTICAL to HEAD, and the failure is against the unmodified HEAD script. The changed is not the challenge but the BOB-111 appears at least partially defective because :7187 now returns real 429s previously returned none. :7185 and :7186 produce zero 429s. This is a 11.4.248-429 corrosion risk and that is why it is filed rather than left as a footnote: run_all_challenges now fail INTERMITTENTLY, and an in-progress red trains everyone to re-run until green which point a real regression is dismissed ‘probably the flaky rate-limit one’. THE DECISION, which is an operator call 11.4.66 and which I deliberately did not fix. Does a 429 from a WORKING limiter prove the sibling endpoint being RESPONSIVE – a 429 proves the endpoint is alive and correctly protecting itself. Assertion (c) 2xx OR 429, and only a connection failure timeout counts as degraded. Risk: a green wedged endpoint that happens to answer would pass. (b) NO – keep requiring 2xx make the challenge limiter-aware: drain out the window before the sibling probe after is served, so the budget is known rather than guessed). (c) Probe siblings on a limiter exempts (a healthz-class route isolation question is asked without spawning a bucket. Recommendation with reason

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					just a pick: (a) composed with a bound liveness check – a 429 carrying a well-timed Retry-After IS evidence of a live, correct behaving service, and (b) makes the response slower and couples it to a window value that will drift. But the semantics of ‘response’ are a product judgement, so the answer is recorded, not assumed. RELATED, stateful rather than folded in: the detector counts only, not 503, though the script header is (or equivalent)’. Counting 503 would be the crash detector’s 5xx tally. Worth noting when BOB-111 lands limiters on :7187. Affected scope / file-scope manifest: challenges/scripts/ddos_resilience_challenge/assertion (c) cross-endpoint isolation run_all_challenges.sh which invokes Reproduction / context: Assertion (c) sibling-endpoint probe to answer ^2 :7187 now enforces a real limiter (metrics: live: x-ratelimit-limit: 120, x-ratelimit-remaining: 86, retry-after: 45, server: uvicorn). A challenge run sends roughly 250 requests to :7187, so sibling probes fired during the endpoints’ tiers land on an exhausted service and receive 429 – which assertion (c) interprets as ‘endpoint degraded’. Timing-dependent: measured PASS=5 FAIL=2; the UNMOVED HEAD script against the same live state later measured PASS=7 FAIL=0 SKIP=0. Acceptance criteria: The operator has answered the classification question: the answer is recorded as consumer DATA. assertion (c) implements it. The challenge produces the same verdict across 3 challenge runs against a rate-limited stack (11.4.2 deterministic consistency), and the first paired 1.1 mutation proving assertion (c) catches a genuinely degraded sibling endpoint, narrowing it must not blind it (11.4.2).

128	High	Fixed (→ Fixed.md)	Bug	—	BOB-165 — Reported-Via: §11.4.202 directive bug on 2026-08-21T20:00:08. By: surfaced while capturing closure for BOB-092; diagnosed rather than v around What (the report, verbatim STALE-ABI-AFTER-INTERPRETER-UP defect, not a missing package. The pa installed; its compiled half is built for previous interpreter. That distinction because ‘pip install rpds-py’ style adv appear to succeed while leaving the 3 in place. WHY IT WAS NOT NOTICED stated as fact: the paths that DO work system python3. ci.sh selects an inter through _select_python; the long-run in this session ran .venv/bin/python - and passed. So the automated regime while the DOCUMENTED operator co broken – an 11.4.238-shaped gap, sin escape was found by an agent captur evidence rather than by the regime. WORKAROUND (measured, not theor PYTEST_DISABLE_PLUGIN_AUTOLOA the needed plugins passed explicitly pytest_timeout ...) avoids the schema autoload that drags in jsonschema -> referencing -> rpds. That is a workar the fix: it silences the import path rat repairing the install, and it will surp person who runs the documented co verbatim. RELATED, and worth decio together rather than twice: BOB-154 rebuilt on 3.12 to match the containe runs CPython 3.12.13 while both syst venv run 3.14.6). There are therefore interpreters in play. Whoever rebuild should confirm rpds resolves for the interpreter afterwards, or this same reappears one directory over. HONES BOUNDARY (11.4.6): this item does N any test is wrong or any product cod

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					The product and the venv-run suites unaffected. What is broken is the doc entry point. Affected scope / file-scope manifest: host user site-packages (~/.python3/site-packages/rpds/); every C documented ‘python3 -m pytest ...’ in any tooling that uses system python3 than .venv/bin/python Reproduction python3 -m pytest tests/e2e/test_live_stack_evidence.py -q –importmode=importlib -> ModuleNotFoundError module named ‘rpds.rpds’, raised during collection via the schemathesis plugin -> jsonschema -> referencing._core -> MEASURED root cause: system python3 but ~/.local/lib/python3/site-packages/rpds.cpython-313-x86_64-linux-gnu.so extension built for 3.13. rpds/init.py ‘from .rpds import *’, and a 313-tagged importable by 3.14, so the submodule does not exist for this interpreter. The CORRECT and unaffected: .venv/lib64/site-packages/rpds/ ships rpds.cpython313-x86_64-linux-gnu.so and ‘.venv/bin/python3 -m pytest tests/unit/ -v –importmode=importlib – the command CLAUDE documents – reaches collection with ModuleNotFoundError, OR CLAUDE.1 corrected to document the supported explicitly. Either way the documented and the working command agree (11 guide that misleads is the documentation equivalent of a PASS-bluff). WORKAROUND EFFECTS MEASURED 2026-08-21 — the not free, and the item previously imported PYTEST_DISABLE_PLUGIN_AUTOLOAD disables ALL plugin autoloader, not just broken one, so anything the suite silently on must be re-enabled by hand: - It breaks pre-existing env-dependent tests in to

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
129	High	Fixed (→ Fixed.md)	Bug	—	test_plugin_rutracker.py — TestConfig::test_default_mirrors, test_env_mirrors_override, test_get_env_with_default, test_get_mirrors_from_env_empty, test_get_mirrors_from_env_whitespa need an autoloaded env plugin. PRO caused by any in-flight change: runn OWN copy of that file under identical produces the same 5 failures. - It mal -timeout=60 (set in pyproject.toml) a UNKNOWN ARGUMENT unless -p py is passed explicitly, so pytest.mark.tim silently inert under the naive recipe believed to be time-bounded is not. - autoloader ON and only schemathesis (no:schemathesis), that same file is 96 CONSEQUENCE FOR ANYONE USING WORKAROUND: -p no:schemathesis strictly better than blanket autoloader where it suffices, because it removes broken plugin. Where the blanket for -p pytest_timeout must be added or t inert, and the 5 env-dependent failure recognised as workaround artifacts n filed as defects. That last point is the the workaround manufactures failure exactly like product defects. This doe change the root cause (the venv's rpo cpython-313 ABI tag CPython 3.14 can import) or the fix (rebuild the venv — It documents that the interim recipe radius, so nobody reads a workaround as a regression. BOB-166 — WHAT. §11.4.19 requires migration to be ATOMIC: a resolving to Fixed.md, DISAPPEARS from Issue (open-only) and APPEARS in Fixed_S (closed-only). Ten rows violate all thr properties right now — they carry a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					status yet current_location='Issues', s render in docs/Issues.md and are list Issues_Summary.md with a status tha reads '(→ Fixed.md)', while appearin Fixed_Summary.md. Any reader of th open tracker is told these are open w MANIFEST (measured 2026-08-21): B (Completed), BOB-129, BOB-131, BOB BOB-145, BOB-146, BOB-148, BOB-153 BOB-157 (all 'Fixed (→ Fixed.md)'). Co rendering: BOB-155/087/157 each gre Issues.md, 0 in Fixed.md, present in Issues_Summary.md, 0 hits in Fixed_Summary.md. ROOT CAUSE (re at runtime, not inferred). 'close' perf atomic migration and REQUIRES –ev 'update –status' sets any §11.4.15 clos value with NO evidence and NO migr and it knows the location, because it a COPY of the real DB: \$ workable-ite –id BOB-065 –db repro.db –status 'Fix Fixed.md)' update: BOB-065 updated (status=Fixed (→ Fixed.md), type=Tas repro.db 'SELECT atm_id,status,curre ...' WHY CAUGHT IT (§11.4.238 coverage-escap Three standing checks stay GREEN on holding the forbidden row, verified o poisoned copy from the repo root so artifact is involved: (1) 'validate' → 'C items, all invariants satisfied' (it has status↔location coherence invariant 'in sync' (DB and Markdown agree — WRONG state; agreement is not corre CM-CLOSURE-SEAM-BINDS CHECK A flags NON-terminal rows whose id ap

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					work commit; these rows are terminated by a row that is outside its predicate by construction. The bug was found by reading a status tally, not by a test in an automated regime — a §11.4.238 disclosure. The bug is a channel escape, which is itself a defect in the code standing to the mis-located rows. ACCIDENTAL. (a) ‘update’ REFUSES a terminal status update with names ‘close’ as the correct path, with a guard that a §1.1 mutation proving the refusal (requiring a guard must make the mutation pass) is not accepted. ‘validate’ grows a status↔location correlation invariant that FAILS on the forbidden path. (b) A golden-bad fixture and a negative correlation test legitimately terminal row in Fixed mode. (c) The 10 existing rows drained to Fixed with class-matched evidence per row, or, where a row’s evidence correlation was produced, honestly re-opened rather than migrated on a bare assertion. (d) Horizontal boundary: this closes the update-path to the detection gap; it does not claim evidence for historical status write was evidence-based. NOT CLAIMED. No fix is implemented. The 10 rows are untouched; drain them is acceptance (c) and each needs evidence, not a bulk UPDATE. BOB-167 — WHAT. download-proxy and Server-Sent-Events routes. They are too expensive class — long-lived connections hold a worker and a generator for the whole — but only one is rate-limit classed: routes.py:801 @router.get(‘/search/stream/{search_id}’) @_rl(‘sse_stream’) <- class routes.py:150 @router.get(‘/theme/stream’) def stream_theme(...) <- NO limiter defined. _rl(cls) resolves to limiter.limit(limit=10) so /search/stream is bound to the sse_stream class while /theme/stream falls through application default. Measured live on running stack: /api/v1/theme/stream
130	Medium	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					ratelimit-limit 120. PROVENANCE + A CORRECTION WORTH KEEPING (\$11 was surfaced by the BOB-109 scaling whose report framed it as: 'sse_stream_limit_decorator is defined imported/applied nowhere ... SSE falls to the 120/minute default: 24x less pressure. That framing is WRONG and was NOT given. The agent searched for one symbol NAME; the wiring uses a different method (@_rl('sse_stream')), and it IS applied search/stream. Verified by reading routes.py:795-806 and the _rl helper routes.py:46-51, with a control needle confirming other *_limit_decorator show real usage in api/init.py so the was not a blind search. The agent's MEASUREMENT (120 on /theme/stream correct and is what makes this a real MECHANISM was not. Both halves are so the next reader does not re-derive wrong cause. WHY IT MATTERS. An SSE endpoint is the cheapest way to p resources: each connection is held on default class permits 120/min of then declared sse_stream class exists precisely because this route shape needs a tighter than ordinary GETs. ACCEPTANCE. (a decision, recorded, on whether /theme belongs in the sse_stream class or general warrants the default — this is a policy not automatically a bug to patch. (b) in sse_stream, the decorator is applied drives BOTH SSE routes and asserts its INTENDED class limit from x-ratelimit so a future route added without a class (c) A guard that enumerates SSE-shape and fails on any that carries no explicit limit class — the general form, so the route does not repeat this. (d) Honest this does not claim 120/min is exploited

131	Low	Fixed (→ Fixed.md)	Task	—	deployment; with network_mode host reverse proxy every caller shares the bucket, which BOB-111 measured and separately. NOT CLAIMED. No change limit values were read from headers, driven to exhaustion — the limiter is shared with concurrent agents on the (\$11.4.119). BOB-168 — WHAT. scripts/run_all_challenges.sh:66 lists “scaling_horizontal_challenge.sh” in challenge set. challenges/scripts/scaling_horizontal_challenge.sh does sed -n ‘66p’ scripts/run_all_challenges “scaling_horizontal_challenge.sh” \$1 challenges/scripts/scaling_horizontal_challenge.sh ls: ca ...: No such file or directory VERIFIED independently, not taken on report — by the BOB-109 scaling agent and re- here by direct invocation. WHY IT M Whether this is cosmetic or a §11.4.2 honesty defect depends entirely on h runner treats a missing entry, and the first thing to determine: if it SKIPS sil challenge bank advertises coverage i have (a §11.4.266 claim-vs-reality rov passing challenge behind it); if it FAI runner is permanently red for a reas unrelated to the system under test, w readers to ignore it. Neither outcome acceptable; they need different fixes. ACCEPTANCE. (a) Determine and rec runner’s actual behaviour on the mis by invoking it, not by reading it. (b) E author the challenge, OR remove the with §11.4.124 discipline: check git h whether it once existed and was dele silently-dropped challenge is the mor interesting defect. (c) If the runner si

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					missing entries, that is its own finding. A challenge must be loud (§11.4.3 SKIP reason at minimum), never absent-a SEVERITY. Low as a defect, but it sits challenge-coverage seam, so (c) may own item. CORRECTION 2026-08-22 (THIS ITEM'S PREMISE WAS FALSE, a was mine. Recorded openly rather than edited. scaling_horizontal_challenge. It is at submodules/challenges/challenges/scripts/scaling_horizontal_challenge. executable, 3107 bytes, dated Aug 7. 9 other entries and the meta-runner. It deleted: added to the roster at 1c959f challenge itself added in the submodule 873c0b1, and a pickaxe search across repositories and all branches finds Z deletions. HOW I GOT IT WRONG. run_all_challenges.sh reads submodule challenges/challenges/scripts/. I checked challenges/scripts/ — a DIFFERENT directory belonging to a DIFFERENT, glob-based. Two similarly-named directories; I mistook the wrong one. That is a §11.4.201(9) identity error. Worse, I wrote that it was “verified by invocation”: I had listed and never run the aggregator, so the overstated the evidence class as well as the answer wrong. THE LESSON, which generalises past this item. In the SAM correctly caught a sibling agent making exact class of error on BOB-167 — a z produced by searching one symbol name applied a control needle there. Then the needle one paragraph later on measurement. The distinction that was caught it: A CONTROL NEEDLE PROVIDED INSTRUMENT CAN SEE; IT DOES NOT IS POINTED AT THE THING UNDER TEST §11.4.201(7)(b) as commonly applied blindness; it does not guard mis-aiming

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					needle for THIS query would have been resolved by the runner itself rather than by the path the runner itself reads. I can confirm that some directory listing was wrong, but I don't know WHAT IS ACTUALLY WRONG, and it's more complicated than what I filed. The missing-entry problem is not subject to no challenges by definition, so it cannot be exercised safely. Run against a check that the submodule is absent — the ordinary way to make a clone made without -recursive — the runner (byte-identity sha-asserted, no cache) reports: PASS: 0 FAIL: 0 SKIP: 16 TOTAL: 16 OBSERVED EXIT CODE: 0 An ENTIRELY SUCCESSFUL BANK REPORTS SUCCESS. Not one dangling entry tolerated — the whole suite silently fails without executing anything. That is §11.4.65 false-null verbatim, and it is observed as-is rather than constructed (§11.4.115(G)). ACCEPTANCE. (a) ANSWERED, though I didn't file: the runner reports a loud, courtly error, and then never blocks, because the expression reads only the FAIL count, and the dangling-entry half is VOID — nothing is dangling. (c) The real work is the exit code; if the roster entry the runner cannot execute is not be indistinguishable from a healthy runner, the decision recorded in docs/qa/BOB-169 is decision_missing_vs_skip.md. RELATED TO BOB-171. REPORTED NOT FIXED: scripts/pre_build_verification.sh:1792 carries a SKIP/MISSING conflation one level up from the other runner. Filed separately.
132	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-169 — WHAT. The §11.4.65 mark export mandate requires every in-scope ship .html/.pdf twins. 286 of the 326 .md files under docs/ (excluding dist/ and node_modules/) are pandoc FRAGMENTS — they begin with <pre> and end with </pre>. This is a bug in the runner. Filed separately.
133	Low	Fixed (→ Fixed.md)	Bug	—	BOB-171 — WHAT. Both rate limiters are per-client bucket on the LEFTMOST edge of the X-Forwarded-For when TRUST_FORWARDED_FOR is enabled.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					proxy/src/api/rate_limit.py:117-123 (:7186) the new stdlib limiter in plugins/download_proxy.py (:7186), which was deliberately built to exact policy parity. That element is CLIENT-SUPPLIED. A reverse proxy APPENDS the peer address RIGHT of whatever arrived, so the left entry is whatever the client sent — address controlled by construction, not by misconfiguration. Consequences with on: (1) rotating a forged leftmost value unlimited sequence of fresh buckets, total bypass of the limit the flag is supposed make MORE accurate; (2) it also defeats idle-reap cap, since each forged identifier distinct key — the bucket map is a memory growth surface bounded only by the cap the cap's eviction then discards the bucket REAL clients to make room for forged EXPLOITABLE AS DEPLOYED TODAY, why this is Low, not High. TRUST_FORWARDED_FOR defaults OFF sites, and the deployed stack runs network_mode host with no reverse front (verified across all five compositions so peer addresses are real client IPs and collapse occurs. The defect is latent: in a moment someone puts a proxy in front turns the flag on to recover real client which is exactly the situation the flag The failure mode is therefore 'correct configuration change silently disabled limiter', not 'currently broken'. PROVIDED Raised as MINOR-3 by the independence of the BOB-111 rate-limiter work and independently confirmed by the impact agent, which noted it at BOTH source tracked follow-up rather than fixing change. Filed here because neither a write access to the tracker. WHY IT C BOTH PORTS. :7186's limiter was built

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
134	High	Fixed (→ Fixed.md)	Bug	—	deliberate policy parity with :7187's, this parsing. Fixing one and not the other leave the two surfaces disagreeing on identity — worse than the shared definition because it becomes surface-dependent and untestable as a single invariant. ACCI (a) Replace leftmost-element parsing with trust-aware resolution at BOTH sites: rightmost-minus-N-trusted-hops, or a proxy CIDR allowlist where only a peer in the allowlist may assert XFF at all — this is a deployment-topology decision and not recorded, not assumed. (b) A test that rotates leftmost element and asserts that the key does NOT rotate, per site. (c) Pair mutation: restore leftmost parsing and must FAIL. (d) Negative control (§11.4) with TRUST_FORWARDED_FOR OFF, which must be ignored entirely and keying back to the peer address — a guard against honouring XFF when the flag is off with a worse defect than the one being fixed. boundary: this closes header-forgery but does not make per-IP limiting fair because where many real users legitimately share an address. NOT CLAIMED. No change needed; sites still parse leftmost; the flag still BOB-173 — WHAT. download-proxy/s/hooks.py:96-102: def _save_hooks(hooks, list[dict[str, Any]]) -> None: try: os.makedirs(os.path.dirname(HOOKS_FILE), exist_ok=True) with open(HOOKS_FILE, 'w') as f: json.dump(hooks, f, indent=2) except Exception as e: logger.error(f'Failed to save hooks: {e}') catches EVERY exception, logs, and returns None. The signature returns None, so sites have no channel to learn the write failed. call sites then report success unconditionally. :152 _save_hooks(hooks) :174 def _save_hooks(hooks) :154 logger.info('

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					hook: ...') :175 logger.info('Deleted hook: ...') return HookResponse(hook_id=..., ...) {'message': 'Hook deleted', ...} USER- CONSEQUENCE, which is why this is not a code-hygiene nit. A user POSTs receives HTTP 200 and a hook_id, and was never written — their automatic never fires, and the API told them it e Symmetrically, a user DELETES a hook 'Hook deleted', the file still holds it, a again after the next restart. In both d the product reports the opposite of w happened, and the only trace is a log nobody is watching. THIS IS THE \$11 SHAPE. The path combines two dang capabilities from that anchor's taxon MUTATION of a shared resource (a fi write) and EXTERNAL SIDE EFFECT (C outbound calls the system will or wil — so it is required to FAIL CLOSED: v precondition, refuse when it cannot l and surface the refusal. Instead it fai a bare 'except Exception:' that only l exact anti-pattern §11.4.252 enumera product layer it is also a §11.4.201(6) successful write and a swallowed fai indistinguishable to the caller. PROV Surfaced as an out-of-scope observat independent reviewer of the BOB-13 isolation work — this swallow is wha that defect into an 'assert 0 == 1' mys because the EACCES on /config was lo discarded while the endpoint kept re 200. Verified here directly from sourc filing (the function body and both cal above), not taken on report. Recorde §11.4.238 discovery-channel escape: agent reading code during an unrela investigation, not by the automated C — the coverage gap is a defect of equ to the defect itself. ACCEPTANCE. (a)

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					_save_hooks propagates failure — ra return a status the callers must cons Both endpoints translate a persistenc into an HTTP error (500-class), never body; a create that did not persist mu return a hook_id. (c) A test drives eac with the hooks file unwritable (read- a patched open raising OSError) and non-2xx status AND that a subsequen not list the phantom hook — assert o observable outcome, not on the log li Paired §1.1 mutation: restore the swa test must FAIL. (e) Audit the same file swallows — this is a pattern, and one rarely alone. (f) Honest boundary: th claim the write currently fails in pro claims that WHEN it fails the user is opposite, and the BOB-135 investigat does fail in at least one real environ CLAIMED. No change made. No asses how often the write fails in the opera deployment. RECORDING A SHELL E MY OWN (§11.4.6): the first version o description was written with the ant snippet inside backticks in a double- argument, so the shell ran it as comm substitution and the text was replace nothing — the stored description rea the exact anti-pattern’. This is the SE this session that backticks-inside-dou has corrupted content (the first many commit message). Fixed here by editi a Python client with no shell quoting Noted because a silently-truncated d description is exactly the kind of quic corruption §11.4.201(7)(c) warns abo path is part of the instrument, and it without erroring. BOB-174 — WHAT. A corrupt hooks f silently indistinguishable from “no h
135	High	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					configured”, and the next create then every existing hook while returning Three defects on one path, filed together because fixing any one alone leaves the reachable. A1 — download-proxy/src/hooks.py:104-112. _load_hooks wraps except Exception: logger.error(...) through to return []. A truncated or hooks.json is therefore reported to even as an empty, healthy hook list. Confirmed source. A2 — the consequence, and this is High. create_hook loads, appends Given a corrupt file that load turns into save writes a one-element list over the Every previously-configured hook is Measured by the implementing agent the ALREADY-FIXED tree, so this survives BOB-173 write-failure fix: BEFORE on [‘prod-hook-0’, ‘prod-hook-1’, ‘prod-hook-2’] reports : 200 {‘hooks’: [], ‘count’: 0} <- ZERO hooks configured DELETE reports {‘detail’: ‘Hook not found’} <- for a hook in the file POST reports : 200 hook_id=3c8a5930-... AFTER on disk : [‘3c8a5930-...’] Three prod hooks destroyed HTTP 200 throughout, nothing surfaced to user. A5 — _save_hooks writes with a open(path, "w"). A crash, ENOSPC, or write truncates the file in place. That the corruption A1 then reads as “no hooks” A2 overwrites. The same codebase also the correct pattern: theme_state.py:104-112 tmp-file + os.replace. WHY THE THREE DEFECTS ITEM. A5 manufactures the corrupt file misreads it as empty, A2 destroys the file. Fixing only A1 leaves truncation reachable; fixing only A5 leaves an existing corruption data-loss trigger; fixing only A2 leaves the file lying about what is configured. The corruption is a defect. DELIBERATELY NOT FIXED UNDER BOB-173, and the reasoning is sound.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					implementing agent identified all the auditing sibling swallows as that item and declined to fix them in the same because: they change GET semantics endpoint the frontend consumes (200 they need a CORRUPT-file reproduction than the UNWRITABLE-file one BOB- and they need a design decision that genuinely not obvious — a MISSING legitimately means “no hooks config a CORRUPT one does not, and today’s cannot tell those apart. Expanding BO scope to cover them would have mea that decision unexamined. ACCEPTA Distinguish MISSING from CORRUPT file remains an empty list; a corrupt error, never silently []. (b) Decide and what GET does on corruption — 5xx, an explicit degraded marker the fron render. This is the design decision, an be stated rather than inferred from v the patch happens to do. (c) create/de NOT overwrite a file they could not p refuse, do not clobber (§11.4.252: mu external side effect must fail closed). the write atomic via tmp + os.replace theme_state.py’s existing pattern ratl inventing it (§11.4.28). (e) Tests asser USER-OBSERVABLE outcome, not log a corrupt file, assert GET does not cla hooks, assert a create refuses rather destroying, and assert the file still ho original hooks afterwards. (f) Paired mutation per guard. (g) NEGATIVE CO (§11.4.201(1)): a MISSING file must st empty list and a working create; a VA must behave exactly as today. A fix th every load fail closed by failing alwa fix. A3, RECORDED SEPARATELY, NOT THIS CHAIN. VALID_EVENTS and HookEventType are two sources of tr

					closed set. Verified identical today, un- against drift: if they diverge a hook r successfully and then silently never f assertion pinning them would close i CLAIMED. No change made. The BOB failure fix is real and orthogonal — it FAILED write honest; it does nothing SUCCESSFUL write of wrong data der misread file.
136	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-176 — WHAT. _get_enabled_trac download-proxy/src/merge_service/s gates rutracker on RUTRACKER_USE RUTRACKER_PASSWORD only. It neve RUTRACKER_COOKIES. So an operato configured with cookies alone — no no password — never has rutracker all, and the tracker is silently absent fan-out rather than failing visibly. W INCOHERENT WITH THE REST OF TH _search_rutracker treats COOKIES as PREFERRED auth path, not a fallback nnmclub sibling DOES check its own variable. So the same codebase holds positions at once: cookies preferred a search site, cookies ignored at the en gate, and cookies honoured for a sibl WHY IT MATTERS MORE THAN IT LO CLAUDE.md documents a standing o mandate (2026-08-15) that per-tracker cookies files at \${TRACKER_COOKIE_ cookies_<tracker>.txt are auto-loaded as <TRACKER>_COOKIES before ever up, restart, install Stage 6 and start.sl and rutracker is named in that set. S SANCTIONED, documented configura for this tracker produces exactly the gate ignores. An operator who follow documented instructions gets a track never runs, with no error to explain MODE. Silent absence, not a visible fa

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					same §11.4.201(6) false-null shape as one layer earlier. BOB-172 fixes a trace RAN and was REFUSED being reported empty; this is a tracker that never ran the merged result simply has one fewer contributor with nothing to indicate PROVENANCE. Found by the BOB-172 implementing agent while tracing the enablement path to locate the status-defect. Recorded here rather than fix change: it is a separate defect on a seam with its own oracle, and folding have widened BOB-172 past its capture evidence. ACCEPTANCE. (a) The enable honours RUTRACKER_COOKIES as an independently sufficient credential, not what _search_rutracker already prefers what the nnmclub sibling already does asserting that a cookies-only configuration ENABLES rutracker, driving the real _get_enabled_trackers rather than a n Paired §1.1 mutation restoring the usual password-only gate — the test must give NEGATIVE CONTROL (§11.4.201(1)): a configuration with NO credentials at all still leave rutracker DISABLED. A fix enables an unauthenticated tracker instead than the gap, because it produces failed searches instead of absent ones. (e) All other trackers' gates for the same asymmetry rather than fixing only the one that was — three positions in one codebase since nobody has checked them together (§11.4.201(1)) HONEST BOUNDARY. Not verified against cookies-only deployment; read from the BOB-172 agent and recorded on its page. The reading is specific and checkable by whoever takes this should confirm by before relying on it. 137 High Fixed.md) Bug — BOB-177 — W BOB-172 wired an identical 4-line HT

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					guard at five private-tracker fetch sites. The download-proxy/src/merge_service/search.py:1638-1658 (rutracker cookie :1390, rutracker credentials :1468, kinozal :1648, nnmclub :1761, iptorrents :1934). Only the rutracker COOKIE password was exercised by tests. EVIDENCE (reviewer preferred): authored mutation R1, per 11.4.194(6) (the BOB-172 independent review): deconstructing ONLY the kinozal guard wiring (search.py:1655-1658) while leaving the other four classifier intact left the full merge_service.py at 883 passed, ZERO failures. The suite only saw four of the five sites. FAILING SCENARIO: refactor drops or subtly breaks the wiring for kinozal, nnmclub, iptorrents, or rutracker without a credential. A 403 at that site silently failed to status=empty with error=None -- the test has the BOB-172 signature -- and no test reddens. DIRECTION (reviewer preferred): collapse the five duplicated wirings into one shared function, e.g. _check_search_response(tracker_credentials, status, body) -> bool, so there is ONE test and a sixth site cannot be added unguarded. (11.4.251 byte-identical-fork extraction). Alternative: parametrise the guard to test all five sites with per-site stub sessions. ACCEPTANCE: mutating the wiring at any of the five sites reddens at least one test. Proof: running the same R1 deletion at each site in turn. 138 Medium Fixed (→ Fixed) Bug — BOB-178 — WHAT: download-proxy/src/merge_service/search.py:1638-1658 had a failed kinozal LOGIN response with login_resp.status not in (200, 301, 302) and logger.error(...); return [] -- and sets None as a diagnostic. FAILING SCENARIO: Cloudflare returns 403 on takelogin.php. The kinozal client reads status=empty, error=None. That test has the BOB-172 signature exactly: a refusal to return the user as an empty result set. CONFIRMATION: establishing this is an oversight, not a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					choice: the rutracker and nnmclub log DO set diagnostics (upstream_captcha_auth_failure), and the iptorrents login falls through to the search fetch when BOB-172's new guard catches it. Kinoz has one leg with neither. FIX DIRECTION: _classify_upstream_http_status(login_auth_failure) before the early return, or an authentication diag for the status-in-(200,301,302)-based case. ACCEPTANCE: a stubbed 403 on the login endpoint produces a non-None response from the kinozal chip, with a RED captured from the pre-fix code first (11.4.115). 13 Fixed (→ Fixed.md) Bug — BOB-172 WHAT: download-proxy/src/api/routes.py:727-745 sets status=captcha_failure with a hardcoded message naming RuTracker requires CAPTCHA. Use /api/rutracker/captcha'. FAILING SCENARIO: search returns zero results and the captcha flavoured diagnostic came from NNMClub Turnstile, not RuTracker. The user is not a RuTracker captcha endpoint for an authentication problem. SEVERITY BOUNDED: the fix and tracker_stats travel in the same message payload, so the truth is present and a user who reads them is not misled -- only the header is wrong. The branch was revived by BOB-172 error propagation (correctly: suppressing error propagation would recreate the same problem one layer up, 11.4.247) and is already covered by the routes layer by tests/unit/api_layer/test_routes_coverage.py:782. FIX DIRECTION: derive the message from the tracker's response, which actually erred rather than hardcoding a failure. SCOPE NOTE: api/ was owned by a sibling project stream during BOB-172; the author was asked not to touch it. ACCEPTANCE: an NNMClub captcha diagnostic on a zero-result search produces a headline naming NNMClub. High Fixed (→ Fixed.md) Bug —

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					— WHAT: scripts/generate_markdown_exports.sh accepts arguments. It unconditionally scans PROJECT_ROOT/*.md, docs/ recursive scripts/ recursively (scan loops at line 105/111/116 as of 2026-08-23; they were when this was filed — line numbers changed in the BOB-169 fix, the substance is unchanged). It was independently verified by executing the generator with an explicit path to the requested one), and PROJECT_ROOT from BASH_SOURCE (line 17). A caller writes 'bash scripts/generate_markdown_exports.sh docs/file.md' gets a WHOLE-TREE run with the argument silently discarded. WHY IT happened: the caller reasonably believes the run is scoped to one file. It was not. In a shared checkout with parallel work streams, regenerate any export whose .md is in its derived files anywhere in the tree or artifacts in other streams' scopes and BOB-068 auto-commit hazard, into another stream's commit. CLASS: a false affordance: script's interface implies a capability to have (11.4.201: an interface must meet its claims). FIX DIRECTION: either accept path arguments and honour them (so the run to exactly those files), or REFUSE them with a clear message when arguments are present. Silently discarding them is the one option that must not remain. ACCEPTANCE: pass the path, either scopes the run to it, or exits with an error naming the unsupported argument. A fix for capturing today's silent-discard behavior is in (11.4.115). LIVE INSTANCE, MEASUREMENT: 2026-08-23 (this is no longer hypothetical). During the BOB-169 fix the conductor called the generator with an explicit path to the ONE document. The argument was discarded.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					and the whole tree was scanned. It g docs/qa/BOB-174/DESIGN_DECISION. {html,pdf,docx} at 11:50 -- a SIBLING document, while that stream's autho editing the source (.md mtime 12:00) exports were therefore stale on arriv additionally carried the pre-fix BOB- defect. The sibling author independe reported them as stale in its own har having no idea another stream had c them. SECOND-ORDER LESSON wort with this item: the conductor's attem the blast radius ALSO failed, and fail 'git status --porcelain \\\ grep -E "\.(htr returned only its own files and read but docs/qa/BOB-174/ is an UNTRACK DIRECTORY, which porcelain collapse single line, so the grep was structur incapable of seeing the files inside it (a): matched the wrong surface; the c read as absence). The instrument tha it is 'find BOB-182 — OPERATOR DECISION (2 §11.4.66 interactive clarification): I MONOTONE RATCHET §11.4.224(E) adoption answer, recorded as consur the adoption model for CM-EXPORT-C VALID is the MONOTONE-DECREASE The count may only go down, never u Immediate hard floor, changed-code- deadline, and per-corpus phase-in w offered and NOT chosen. This closes BOB-182 — the half that was genuine operator's. THE REMAINING HALF IS DEFECT STILL OWED: BASELINE is a constant, so the ratchet does not actu — on improvement the gate PASSES the value to lower it to, but nothing l and the gate keeps permitting regres the original count after the corpus ho

					must NOT collapse §11.4.249 role separator gate that writes its own threshold during build run becomes a PRODUCER as well as GATE. Acceptable shapes include a pre-build baseline the gate READS but never writes lowering via a separate explicitly-invoked command, or a gate that FAILS loudly if live count is below baseline so drift becomes actionable refusal. This answer is recorded as consumer DATA per §11.4.35 — it is the operator's stated choice, not an agent-chosen and supersedes any prior agent-chosen on this question. Options not chosen above so a future reader does not re-settle call (§11.4.112(5) bounded-verdict discipline applied to decisions). — pre-text follows — WHAT: CM-EXPORT-COMMAND VALID (pre-build invariant 50) adopted pre-existing violations via a monotone ratchet rather than a hard floor. Two options. (1) THE ADOPTION DECISION OF THE OPERATOR'S, NOT THE SCRIPT'S. 11.4.101 requires the brownfield adoption question SURFACED to the operator and the answer recorded as consumer DATA – never as a ratchet. What exists today is a header file plus a BOBA_EXPORT_CHARSET_BASELINE override: that DOCUMENTS a decision made, it does not RECORD an answer the operator gave. The independent reviewer judged the choice defensible and would not reverse it (a hard floor on 301 violations the build unreachable, which 11.4.23.11.4.101 favours the reversible option). It is correctly held that it is not yet complete. Options for the operator: immediate phase-in (BASELINE=0) / keep the monotone ratchet corpus phase-in / changed-code-only scheduled full-corpus deadline. (2) THE RATCHET DOES NOT ACTUALLY RATCHET. BASELINE is a hardcoded constant. C

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
142	High	Fixed (→ Fixed.md)	Bug	—	improvement the gate PASSES and PL value to lower it to, but nothing lower gate keeps permitting regression all the way back to 301 after the corpus heals. The gate now says tightening is MANUAL rather than claiming automatic behaviour that doesn't exist (11.4.6), but the honest statement is a stopgap, not the fix. WHY IT WAS NOT WITH THE FIX: a gate that writes its threshold during a pre-build run becomes PRODUCER as well as a GATE (11.4.24), and that is a design characterisation. The operator should approve rather than a side effect. ACCEPTANCE: the operator's adoption answer recorded as consumer and either a persisted baseline the gate and never raises (with the role-separated question answered), or an explicit decision manual tightening is acceptable. BOB-183 — The compiled Angular bundle shipped at download-proxy/src/ui/dist/ still carries the BOB-164 color defect verbatim: scanned 2026-08-23 21 violation nodes on darcula/dark and darcula/light, while the same sources on scratch path report 0 across all 16 palette mode combinations. The fix is therefore at the SOURCE layer and absent at the layer, so §11.4.108 layer 2 is NOT closed; users still see the low-contrast dashboard. Compounding facts make this silent regression obvious: dist/ is gitignored, so the diff never shows in a diff; and scripts/install asserts only that the directory EXISTS, that it is newer than the sources it was from, so a stale bundle passes installation unchallenged. Acceptance: install (or equivalent gate) FAILS on a bundle of sources, the bundle is rebuilt, and does BOB-164/axe_contrast_scan.py run again.

147	—	Fixed (→ Fixed.md)	Bug	—	rather than total. WHY IT IS FILED SINCE the §11.4.252 fail-open pass made this OBSERVABLE by adding a log line, with the right first move — but observability is a repair. The underlying at-most-once : remain, and per §11.4.226(5) a mitigation close the defect it mitigates. THE DECISION IS A REAL TRADE, not an oversight to correct moving to add-after-successful-yield at-least-once, but a DETERMINISTIC series of failure would then retry the same request every poll forever — trading silent loss for a loop. Options are (a) keep at-most-once the log line as the contract, (b) add-after-successful-yield with a bounded per-poll budget, (c) add-before-yield but remove on emit failure so exactly one retry occurs. ACCEPTANCE: an explicit decision re-implemented, and covered by a test that raising emit and asserts the chosen series with a RED observed first per §11.4.1.1 as MINOR-1 by the independent review of fail-open batch; filed rather than absent the residual defect is not retired along with logging that revealed it. BOB-195 — OPERATOR DECISION (2023 §11.4.66 interactive clarification): THE SCANNER With NODES — KEEP SIM §11.4.252 fail-open scanner is FIXED by contextlib.suppress; ruff's SIM105 rule is ENABLED in pyproject.toml. Disabling it and the belt-and-braces both-at-once were offered and NOT chosen. Rationales with the decision: fixing the gate makes it harmless, whereas disabling SIM105 would leave the gate blind to any suppression written by hand, inherited from a default style, or already present in the tree. I BEHAVIOUR: with contextlib.suppress(...) and with suppress(...) (the from contextlib)

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					import suppress binding) wrapping a dangerous-combination call are DET the same severity and message shape except/pass form; a narrow suppress(SpecificError) around a N dangerous call must NOT fire, since a positive refusal is a §11.4.201(1) FAIL equal severity to a missed real one. CONSEQUENCE FOR THE NUMBER: c the scanner's finding count stops bei over try/except shapes and becomes census — any prior count citing com was scoped to try/except only. This ar recorded as consumer DATA per §11. the operator's stated choice, not an a inference, and supersedes any prior chosen default on this question. Opti chosen are named above so a future not re-litigate a settled call (§11.4.112 bounded-verdict discipline applied to — prior item text follows — WHAT: t §11.4.252 fail-open scanner matches shapes (A1)/(A2). contextlib.suppress node, so a swallow written that way VERIFIED BY THE CONDUCTOR with needle through the same invocation (§11.4.201(7)(b)), because a first atten returned 0 for BOTH forms and was the gate takes -root, not a positional, path exits on an unknown arg (§11.4 the invocation path is part of the inst Correct run: try/except/pass around os.unlink(user_supplied_path) -> 'FAI swallowed exception ... :5', the needl contextlib.suppress(Exception) around IDENTICAL call -> 'PASS - no swallow exception ... anti-patterns found'. Bot untrusted input with an irreversible both swallow everything; one is caug is not. WHY IT IS WORSE THAN A PL pyproject.toml enables ruff's SIM rul

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
148	—	Fixed (→ Fixed.md)	Bug	—	SIM105 is ‘use contextlib.suppress in except-pass’. Our own linter therefore authors to rewrite the form this gate into the form it CANNOT. The two too pulling in opposite directions and the runs more often. Every SIM105 autof shrinks this gate’s coverage while the down, which reads as progress. CON: FOR THE NUMBER: the scanner’s find is a FLOOR over try/except shapes, not of swallows. Any statement of the form open sites remain’ must be read as ‘Not except shapes’. ACCEPTANCE: the scanner recognises contextlib.suppress (a With items call contextlib.suppress with a exception type) and applies the same capability test; a golden-TRUE fixture suppress form; a golden-FALSE fixture suppress wraps a single-capability diagnostic emitter and must NOT fire; and an exception decision on the SIM105 tension - either the shapes this gate governs, or accept and teach the gate to read it. Discover §11.4.252 remediation agent when it MINOR-3 fix required using contextlib at three diagnostic-emitter sites; those are legitimate and justified in-source BOB-197 — OPERATOR DECISION (2 §11.4.66): GENERATE THE TOKEN A IT The conductor generates a 32-byte token and writes BOBA_API_TOKEN in the operator configures clients with it 2026-08-26: token generated via secrets.token_hex(32), appended to .env comment naming BOB-197 and the remed env-gating fact, chmod 600, value should operator ONCE and never written to file. Safety verified BEFORE writing (§11.4.10): .env matched .gitignore:27 was untracked (needle-proven — the

#	Level	Status	Type	Fixed-In Tag(s)	One-line description

					workflows/tests/unit/test_main.py:63 sibling-agent scratch worktree, i.e. the observer-contamination class (11.4.201(7)(a)). Recorded because the very record teaches to exclude — and main-tree textual match (tests/unit/ test_graceful_shutdown.py:165) sits i triple-quoted string literal, a carrier (11.4.201(7)(a)). Recorded because the instructive: it was introduced BY the that removed the 97, so a correction exempt from the discipline it applies as consumer DATA per §11.4.35 — the stated choice, not an agent inference not chosen are named so a future rea not re-litigate a settled call. — prior i follows — RESIDUAL ASYMMETRY su the BOB-195 fix, reported rather than closed. After teaching the scanner W BROAD suppress (Exception / BaseEx detected with the same severity as tr pass. A NARROW suppress (suppress(FileNotFoundError)) is not semantically identical narrow try/ex FileNotFoundError: pass IS flagged. S SIM105 rewriting a narrow handler s that site out of the gate's scope, a sma of the exact mechanism BOB-195 was close. WHY IT WAS NOT CLOSED IN 7 with the measurement that decided i authoring agent reported 37 narrow sites, all idiomatic. CORRECTION (202 independent review): that figure DO REPRODUCE and this conductor prop into this item as fact without verifin error is mine, not the reviewer's. Me constitution repo has 0 narrow with sites; boba first-party has exactly 1 (a suppress(OnError)). The nearest corp 35 narrow except x: pass handlers i party - a DIFFERENT construct - and census (OnError x7, ImportError x7,

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					BrokenPipeError x3, RuntimeError x3, ValueError x2, FileNotFoundError x2, IndexError x2, SystemExit x2) contrasted with the 'one idiomatic': a bare SystemExit: pa benign tolerance. The two populations should not be conflated, and the distinction is the substance of this item. The false-positive argument therefore rests on the 35 n except-handlers, not on 37 suppress : strength should be re-judged on that which under 11.4.201(1) is a FAIL-bl severity to the gap it would close, and practice because it trains readers to i gate. The subagent recorded the asym the gate header as a known gap rather shipping the storm. That was the right is why this is a separate tracked item an unfinished one. THE DECISION IS OPERATOR'S, mirroring BOB-195 itse accept the asymmetry permanently, gate header stating it so no reader m count for a census; (b) flag narrow su ONLY when combined with an irreve capability (delete / truncate / kill), cat shape that actually matters and leavi idiomatic sites quiet; (c) flag all narrow and absorb the 37 via a justified exer like the LAN-route guard uses. RELAT worth carrying: the five newly-visible production sites in download-proxy/merge_service/search.py (1294, 1303, 1333) wrap proc.kill / os.killpg / proc. BOB-126 cleanup path. The conductor the 11.4.263 pgid guard IS present an both killpg sites - _pid and _pgid each isinstance(int) and > 1 before the sys the BOB-126 forensic reasoning inline sites are true-by-the-scanner's-defini SAFE in fact, and want a justified exe entry rather than a code change.

151	Medium	Fixed (→ Fixed.md)	Bug	—	BOB-200 — WHAT: scripts/gates/cm_dangerous_combination_fail_close builds its scan file list with find(1). If find DIES (permission error, resource exhausted, interrupted), the gate receives an EMPTINESS and interprets that as ‘no files in scope’ and topology SKIP -> exit 0. The failure IS logged to stderr but SILENT in the exit code, so propagating on exit status reads a dead instead of a clean corpus. WHY IT MATTERS: the textbook 11.4.201(6) FALSE-NULL – a gate with an instrument and a clean artifact returns an identical quiet zero. It is also a 11.4.201(6) OPEN on exactly the ‘cannot enumerate corpus’ condition where the gate’s own discipline is to fail CLOSED. A gate that fails to see must refuse, not pass. AFFECTED: constitution/scripts/gates/cm_dangerous_combination_fail_close find invocation and the empty-list branch EXISTING – NOT introduced by the BOB change; found by the independent reviewer while reviewing that change explicitly scoped OUT of its remediation. REPRODUCTION: make find(1) fail due to gate run (unreadable scan root, or a scan returning non-zero with empty stdout) and observe the gate exit 0 with a topology message, indistinguishable from a gate with an empty corpus. ACCEPTANCE: (1) the gate distinguishes ‘find succeeded and found files’ from ‘find failed’ – check find’s exit not only its output; (2) a failed enumeration FINDING (non-zero exit) naming the precondition, never a SKIP; (3) a gate with an empty scan root still SKIPs honestly against the 11.4.201(1) golden-FALSE guard, so it does not become a false-positive refusal. paired 1.1 mutation: restore the swallowed failure behaviour and the new fixture

163	critical	Fixed (→ Fixed.md)	Bug	—	one session that the deny-all globs were silently eaten — the first (BOB-204's <code>credentials_failclosed_test.go</code>) was caught after the fact. It also confirms this item as “beyond the item” warning empirically. the broadest of the four globs and it contains whose name contains no secret and no credential — merely the word ‘user’ or ‘user_owned’, which is the FEATURE NAME (spec 002-user-owned-downloads). The test named after this feature is a canonical silent loss. Two hits in one session, from independent streams, is not a coincidence — it is the defect operating normally. BOB-213 — WHAT: the §11.4.252 fail-open gate's extension list omits shell entirely. Measured verbatim by the conductor: <code>constitution/scripts/gates/cm_dangerous_combination_fail_closed</code> — exts=“\${DANGEROUS_COMBO_EXTENSIONS} cc cpp h hpp java cs js ts jsx tsx php perl No bash. THE CONSEQUENCE, MEASURED: scripts/ IS a declared DANGER_ROOT (pre_build_verification.sh:1511). It contained 198 tracked .sh files and 3 .py files. So 71 files in a root the gate is explicitly possible SILENTLY INVISIBLE — while invariably the driver prints "no fail-open anti-pattern: first-party source root(s)". Project-wide 198 tracked .sh files (negative control: instrument proven seeing). WHY THIS IS THE WORST OF THE THREE HOLES: BOB-213 is a scope hole (root never looked at). BOB-214 is a matcher hole (Go enumerated but unanalysable). THIS one is worse than BOB-213 because the root IS declared, IS scanned, counted as covered, and 96% of what was never examined. The count in the driver summary is an under-count presented in the census. AND SHELL IS THE HIGHEST

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					LANGUAGE HERE, not the lowest: the orchestration, credential handling, control and gates are shell. start.sh a LOC and is, per CLAUDE.md, THE or Fail-open in shell is also unusually ea — a bare `cmd \\\  true`, an unchecked+eregion, a swallowed2>/dev/null– a §11.4.67(6) already records one li of exactly this class (a bare exec redirection silencing an interaction for its lifetime). CORRECTION TO PREVIOUSLY-STATED ACCEPTANCE CRITERIA (§11.4.6): I asserted, when filing that "the honest-blindness path (§ SKIP-with-reason, which the gate a implements correctly for unenumerated extensions) is preserved". THAT IS gate's honest SKIP-with-reason exists PYTHON ARM's degradations, NOT for absent from the ext list. An unenumerated extension is a SILENT false-null, honest skip. The distinction is lost and I stated it backwards. NOTE ON NUMBERS: the BOB-205 stream cited list at :318; the conductor measurement:457. Both are correct at their respective a sibling stream (BOB-195 r7) is a editing this file. Re-derive before ACCEPTANCE: (1) either shell is added ext list WITH an arm that can actually analyse it, or unenumerated extensions produce an explicit UNANALYSED version file – never a silent pass (this is an analyser-registry fix BOB-191 needed doing it once covers both); (2) the summary reports files ANALYSED, none present, so an under-count cannot be as a census; (3) a RED planting a open under scripts/ and asserting (4) golden-FALSE per §11.4.201(1) – correctly fail-CLOSED shell guard

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					flagged; §11.4.67's own brace-scope form is the natural fixture. COMP B0B-191 (matcher hole – same primitive classify by local shape, never con semantic role; and the analyser-re closes both) and B0B-205 (scope ho §11.4.250 these are three symptoms primitive defect; per §11.4.214 th three items because the fixes diff DISCOVERY CHANNEL (§11.4.238): fou B0B-205 verification stream, confi independently by the conductor. 					may not have chosen. WHY NO GATE three independent reasons, each su its own – (a) cmd/boba-ctl is in n DANGER_ROOT (BOB-205); (b) even in files are structurally unanalysabl current gate (BOB-191); (c) this s semantic default-branch decision, the two text patterns the non-Pyth match. It was found by a human-equ read, which is precisely the §11.4 class. HONEST QUALIFICATION (§11. boba-ctl/main.go has NO_ = err, NO = nil {}, and NO silentreturn nil toda verified with a control needle aga qBitTorrent-go/internal/config/con This finding is the exception, not many; the scope hole around boba-c otherwise LATENT (it hides nothing it guarantees a future one lands u ACCEPTANCE: (1) an unrecognised/em value REFUSES with an error naming offending key and its declared val silently defaults; (2) a RED driv auth: and asserting today's silent resolution, flipping to refusal po golden-FALSE proving every LEGITIM value still resolves correctly – a refusal here would break real depl (§11.4.201(1)). DISCOVERY CHANNEL (§11.4.238): found by the BOB-205 verification stream while confirmi qualifies as a §11.4.252 surface. major Fixed (→ Fixed.md) Bug BOB-216 – WHAT: three carrier clas the gate's PRIMARY mode, not only degraded text fallback. Measured a text_rc=1 (both modes report the h COMMENT or DOCSTRING quoting the c anti-pattern is reported as a LIVE default – both spellings; (b) a / or a string constant holdingtry { x

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					{ }is reported as an empty catch, o carrier line. Shape (b), and the C half of shape (a), are LANGUAGE-AG GREPS with NO structural counterpa mode – so there is no parser to be WHY IT MATTERS: the gate's header blanket claim that "A parser is im both by construction". That is OVE now corrected in place, scoped to Try/With shapes where it is actual Everything else – every non-Python and the credential/empty-catch tex even on Python – has no AST arm at the immunity never applied there. . §11.4.201(1) false refusal in the mode is materially worse than one fallback nobody expects to be exac refuses provably-healthy code on t gate is trusted on. THE CONTROL N SHARPENS IT (recorded so the next inherits the measurement): a #-COM import does NOT poison the licensi (text=0), because those regexes ar anchored. So the blindness is to S specifically, not to non-code gene distinction is what makes the comm fix tractable for one class and no others. WHY IT WAS NOT FIXED IN T THAT FOUND IT (§11.4.6 honest boun this is the right call): closing t a PER-LANGUAGE comment-and-string across every configured extension. model's failure direction is the U reporting one – a mis-parsed strin silently swallows real violations remainder of the file. The same re made the round DECLINE the triple- counter for OVER-1 while ACCEPTING comment strip for OVER-A: the comm ambiguity resolves toward KEEPING (proven by three control needles –

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					violation + comment, # inside a string, escaped quote before # – all 1/1), fence counter's ambiguity resolves DROPPING text. Direction of failure difficulty, is the discriminator. full lexer here would import the reporting failure mode this gate r everywhere else. OPERATOR DECISION (§11.4.66 / §11.4.197): whether to language comment-and-string models consumer call, not a default this pick unilaterally. Options: (a) accept over-reports and DISCLOSE them per (what the round did – a new MODE-INDEX CARRIERS section now enumerates all (b) build the models per language under-report risk with a fixture per language; (c) narrow the language-greps so they only fire where a string arm exists, trading coverage for precision RELATION TO SIBLINGS (§11.4.214 different similar, deliberately not merged): the gate flagging a fail-CLOSED SS a semantic-role miss in the PYTHON is a CARRIER miss (comment/string code) that is MODE-INDEPENDENT. BO language absent from the ext list All three share the primitive §11. in BOB-191: classify by local synt shape, never consult semantic role fixes differ, so the items stay separate ACCEPTANCE: (1) the operator decision is taken and recorded; (2) whichever chosen, each of the three classes fixture proving current behaviour, future change cannot silently alter if (b) is chosen, a golden-FALSE proving a REAL violation adjacent carrier is still caught – the underguard, which is the whole risk. D CHANNEL (§11.4.238): found by the

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					round-7 remediation stream while c different finding, NOT by the auto regime and NOT by the independent that audited the same file in round 167 critical Fixed (→ Fixed.md BOB-217 – WHAT: tools/ plugin_update_automation.py update combines three §11.4.252 dangerous capabilities and is gated by nothi could stop a hostile payload: - U INPUT: 14 URLs across four GitHub repositories, THREE of which are t PERSONAL repos, not the official q organisation. - MUTATION: writes <name>.py. - DEFERRED CODE EXECUT qBittorrent EXECUTES those engine bytes fetched over the network bec code on the operator's host. The 0 validation is compile(content, "<s "exec") at tools/ plugin_update_automation.py:213 – verified as the sole compile call. SYNTAX check. A syntactically vali exactly what a hostile payload is. NO signature verification, NO pinn SHA, NO hash allowlist, NO provena of any kind. §11.4.252 requires a combining >=2 dangerous capabiliti CLOSED – verify every precondition when any is unverifiable. This pat THREE and verifies none of them. § supply-chain clause is the direct counterpart: dependencies are eith hash-verified, provenance-attested mirrored through a hash-pinning re unattested public source is an int risk, and here the unattested publ becomes EXECUTED CODE. THE SHARPE ABOUT THIS FINDING: the fail-close produced THREE FALSE POSITIVES in file (:189, :198, :215 – all triag

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					POSITIVE, see B0B-214's correction MISSING this, the one genuine dang combination in it. That is the §11 both-directions failure – false-po false-negative – demonstrated insi file. It is the strongest availabl that the detector classifies by lo syntactic shape and never consults role (the §11.4.250 primitive name B0B-191/B0B-216). REACHABILITY, S HONESTLY (§11.4.6): the script is NOTHING – control-needle-proven (9 hits, 0 negative control) it is re only by its own README, its own do and a tracker note; zero hits acro *.yml / *.py / Makefile outside to own README self-declares "not invo normal start/stop flow". Last func commit 2026-04-12. So this is NOT automated path. It IS reachable by --update, which is exactly what th exists for. Severity is Critical o capability combination, bounded by reachability – not on an active ex path. ACCEPTANCE: (1) plugin sour pinned (commit SHA or content hash verified before write; (2) an unve source REFUSES and names which che (§11.4.252) rather than proceeding syntax pass; (3) the compile() cal documented in-source as a syntax c is NOT a safety gate, so nobody re one; (4) a RED serving a syntactic hostile payload and asserting it i pre-fix-absent / post-fix-present; golden-FALSE proving a legitimate update still succeeds (§11.4.201(1 DISCOVERY CHANNEL (§11.4.238): fou concealed-hits triage stream while establishing that the gate's four this area were false positives. No

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					automated QA regime – and the regi pointed here reported the wrong th 168 major Fixed (→ Fixed.m – BOB-218 – WHAT: tools/README.m "the backup is restored" on valida failure. Conductor-verified: shuti appears EXACTLY ONCE in tools/ plugin_update_automation.py and co FORWARD only – a reverse-direction has ZERO occurrences (grep control proven seeing: needle 2 hits, nega control 0). The plugin write opens "w", which TRUNCATES IMMEDIATELY. OBSERVABLE HARM (the reason this i merely a doc defect): a failure pa through the write leaves a TRUNCAT IMPORTABLE plugin on disk. The ope told the update FAILED and reasona concludes the previous file surviv because the README says it was res was not. The next ./install-plugin the corrupt file into config/qBitt nova3/engines/ and that search eng SILENTLY STOPS WORKING. The .bak n recover DOES exist on disk; the to mentions it and never uses it. Th §11.4 documentation-layer bluff wi downstream consequence: the doc as safety property the code does not and the operator's recovery decisi on that false assertion. SECOND, DIVERGENCE: the README claims JSON stdout; :274 writes it to a FILE (open(args.output, "w")). THIRD, MINOR DEFECT in the same file (rec rather than as its own item becaus the file and the fix window): _extract_version at ~:198 uses a BAREexcept:, so a Ctrl-C during the sweep is SWALLOWED. That is a sign defect, not a fail-open – the gate

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					this line, but for the wrong reason: the silent default return; the reason is the bare except catching KeyboardInterrupt. ACCEPTANCE: (1) either the rollback is IMPLEMENTED (restore the .bak on failure) or the README claim is DELETED – the code must agree (§11.4.6); if implemented, write to a temp file and rename at the end rather than truncating in place; (2) the stdout-vs-file claim corrected; (3) the except narrowed so KeyboardInterrupt propagates; (4) a RED that fails to complete mid-way and asserts the previous path is intact (post-fix) / truncated (pre-fix). REACHABILITY: same as the sibling, but hand-run only, not in any automated test. last functional commit 2026-04-12. Major on the harm shape, bounded by the reachability. DISCOVERY CHANNEL (if found by the concealed-hits triage team). Not by the automated QA regime. Severity: minor Fixed (→ Fixed.md) Bug BOB-220 – WHAT: scripts/ownership_repair.sh:891-895 runs chmod intending to strip setuid/setgid bits but live: the chmod RUNS and SUCCEEDS, but mode stays 2755. Root cause measured: chmod with a 3-DIGIT symbolic-equivalent octal PRESERVES the setgid bit on DIRECTORIES; only a 4-digit form (e.g., 0755) or an explicit g-s clears it. The comment :868-884 describes a strip that does not occur for directories. EFFECT: benign – the surviving setgid bit is not harmful, and no defect is known to stem from it. This is filed as a §11.4.6 defect: an in-source comment asserts that the behaviour the code does not perform matters because the next reader will strip it, and because a future security-hardening strip written against the same pattern

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					silently fail the same way. RELAT BOB-207: the same stream measured repair a new file inherits gid 100 SETGID BIT STILL SET – the two fac compound. If BOB-207 is resolved b the repair (the recommended direct setgid survival becomes moot for t but the misleading comment remains ACCEPTANCE: (1) either the strip i (00755 or g-s) or the comment is c state that directories retain setg and comment must agree; (2) if mad RED asserting mode 2755 -> 0755 on directory, since the current form no-ops; (3) golden-FALSE proving a that SHOULD keep its mode is not g changed. DISCOVERY CHANNEL (§11.4 found by the BOB-207 stream while unrelated behaviour. Not by the au regime. 170 critical Fixed Fixed.md) Bug – BOB-221 – WH scripts/pre_build_verification.sh 30 (CM-BASH-UNIT-TESTS-EXECUTED) e suites by FILESYSTEM GLOB (:1196) fail() on any non-zero exit. It th RUNS untracked suites, and it has of a test that is SUPPOSED to fail MEASURED: tests/pre_build/ test_bob205_danger_roots_scope.sh correctly, because it is a RED tes BOB-205, an unfixed defect. Invari counts that as a gate failure. The T042 verdict is FAIL, and this is three blocking causes. THE STRUCT PROBLEM: §11.4.115 and §11.4.224 R RED authored FIRST and OBSERVED TO before the fix exists. §11.4.135 r RED to persist as the permanent re guard. So the discipline mandates failing tests exist in the tree be authoring and fixing – and the blo

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					treats their existence as a defect the constitution correctly makes t refuse the commit. That is a §11.4 seam problem: the gate asserts "no fails" when the invariant it should "no suite fails UNEXPECTEDLY". WH SURFACED NOW: this session authore across parallel streams (BOB-204, BOB-207, BOB-212) – the first time discipline was applied at this vol Previously REDs were flipped GREEN same round, so the window never sp gate run. The defect is not new; t is. THE FORBIDDEN RESPONSES (§11. NOT delete the RED to make the gat NOT weaken invariant 30 to ignore do NOT mark the RED skipped without reason. Each converts a real signa silence. FIX DIRECTION – this is quarantine mechanism, which the co already specifies and this project wired: a RED declares its expected status and its tracked item (a hea a naming convention, or a manifest invariant 30 reads that declaratio declared-RED failure is reported a (not a fail) while an UNDECLARED f still blocks. Crucially the declar EXPIRE or be tracked – §11.4.248 p quarantine with a stabilisation de precisely so "expected to fail" ca permanent cover. A RED whose item flip GREEN or the gate should FAIL stale declaration. ACCEPTANCE: (1 declared RED does not block; (2) a UNDECLARED failing suite still blo §11.4.201(1) guard – a fix that ig failures is strictly worse than th (3) a declared RED whose tracked i CLOSED blocks, so declarations can (4) a paired §1.1 mutation removin

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					declaration-check makes the gate a undeclared failure -> gate FAILs. CHANNEL (§11.4.238): found by the readiness preflight, before the en rather than during it. Not by the QA regime – the regime IS the thin would have blocked. === CORRECTED – MY FIX DIRECTION IN THIS ITEM WA AND THE BLOCKER IS WIDER (§11.4.6) CORRECTION 1 – §11.4.248 IS NOT TH MECHANISM. I wrote "this is §11.4. quarantine mechanism, which the co already specifies and this project wired." That is half right and the matters. §11.4.248(A) QUARANTINE t FLAKY tests – its trigger is liter consecutive-run-different-verdict after-red", and its remedy is to M suite to tests/quarantine/ and run blocking suite WITHOUT it "so gree green". §11.4.248(B) PROTECTED-SPE plus a required-reviewer gate on M regression test; it never says a t fail. A RED is DETERMINISTIC and M BE RUN – §11.4.115(F) and §11.4.22 the RED verdict to be PRODUCED as evidence. Excluding it destroys th artifact the discipline mandates. I two would also let a genuinely fla hide behind a RED declaration and What §11.4.248 legitimately suppli what should be INHERITED rather th invented (§11.4.227), is the SHAPE list + a tracked item + a deadline only-shrink ratchet. CORRECTION 2 A LANGUAGE-PARITY GAP, NOT A DESIG Conductor-verified: the project AL this mechanism on the PYTHON side. pytest.mark.xfail(strict=True) is deliberately for OPEN defects at t scaling/test_scaling_envelope.py:9

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					(BOB-167, documented in tests/scal README.md:64) and tests/stress/test_plugin_parsers_stress_chaos.p whose own comments carry the ratch discipline verbatim ("it stays vis xfailed in every report", "then re xfail"). So "declared expected-fai strict so an unexpected pass fails ALREADY accepted policy in one lan BASH side has no equivalent. That gap. CORRECTION 3 – BOB-221 IS NO SUFFICIENT TO UNBLOCK T042. A full replication of invariant 30 measur FAILED=4 SKIPPED=2: rc=124 300s test_compute_badges_carrier_match. HANG, not a RED. Blocks independent separately. rc=1 3s test_ownership_gid_agreement.sh BOB-207's RED (a SECOND in-glob RE item assumed one) rc=1 1s test_bob205_danger_roots_scope.sh BOB-205's RED rc=127 9s test_check_cm_lan_routes_authentic CONTAMINATED: a sibling stream was lan_route_auth_analyzer.py during the run (§11.4.119 – the surveying not own that resource and correctl to adjudicate). rc=127 is the §11. internal FAIL-bluff signature, not verdict either way. Returned to it stream. ALSO: BOB-204's and BOB-21 share tests/security/test_gitignore_swallow_is_loud.sh, OUTSIDE invariant 30's glob and ex NOTHING (BOB-222) – they do not bl and widening the glob would immedi another blocker. THE DESIGN, RECO two-place declaration + SSoT expir semantics. THREE independent facts before a failure is excused – (1) is listed in scripts/lib/expected_

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					file the PRODUCING streams do not the suite file itself carries# EXP RED:with the SAME id; (3) <ID> is docs/workable_items.db, FAIL-CLOSE unreadable store or unknown id (§1 Plus STRICT-XFAIL PARITY: a declar that PASSES blocks, which mechanic the ratchet to shrink in the same the fix. EXIT-CODE CONVENTION REJ MEASURED EVIDENCE – and I had flag promising. The non-{0,1} exit space ALREADY CLAIMED IN THIS REPO FOR T MEANING: test_gitignore_swallow_is uses exit 2 = "INSTRUMENT BROKEN o LEAK – verdict void", and test_bob205_danger_roots_scope.sh = ABORT (instrument blind). Both w precisely so a blind harness can n read as a verdict. Overloading eit "expected red" would make a genuin INSTRUMENT INDISTINGUISHABLE FROM RED – the gate would swallow exact failure class those codes exist to It also fails acceptance (4) (an i carries no item id) and (3) (nothi check), and it puts the declaratio the PRODUCER, collapsing producer! (§11.4.240/§11.4.249). HONEST BOU THE DESIGN (§11.4.240): it achieve separation by LOCATION and MULTI-P AGREEMENT, not by true CAPABILITY, §11.4.240 prefers. There is no PR/ seam here to enforce capability – Hard Stop #1 removed all CI/PR gat CODEOWNERS half of §11.4.248(B) is STRUCTURALLY UNENFORCEABLE in this What the design buys is that silen failure requires a coherent three- visible in a diff, instead of one line. THE RED: tests/pre_build/ test_bob221_expected_red_declarati

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					extracts invariant 30's loop and i predicate VERBATIM FROM THE LIVE G CONTENT MARKER (never line number) them against a hermetic scratch PR – so the logic under test is the g text, not a paraphrase (§11.4.226 Measured RED: 3 of 5 properties un 1. P3 is asserted on the blocking merely on "it blocked" – today eve blocks, so a bare did-it-block che pass FOR THE WRONG REASON and keep the anti-rot half were never built flip proven with the BYTE-IDENTICA against a sandbox carrying the pat all five properties met. Four pair mutations each kill exactly ONE pr one-to-one, no cross-talk. THE PA lines, 4 hunks + one new file scri expected_red.sh,git apply –checkcle APPLIED. Operational note the land must not miss: the table names test_bob205_danger_roots_scope.sh test_ownership_gid_agreement.sh, b carries an# EXPECTED-RED:` marker (verified 0 in both) — without those t additions the gate blocks them with" but the file carries no matching mark is the fail-closed design working as in a bug. SEQUENCING RECOMMENDAT bounded variant of (i) — land the me declaring exactly BOB-205, BOB-207 a item's own suite, add the two missing triage the rc=124 hang as its own iter the rc=127 to its owner, THEN run TO HONEST COST, STATED NOT HIDDEN modifies the blocking gate BEFORE th ever run clean, so the mechanism's fi exercise IS the T042 run. The circular unavoidable and IS this item (§11.4.1 whose precondition is produced by t gates): a clean T042 run is impossible

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
171	major	Fixed (→ Fixed.md)	Bug	—	RED exists, so “validate the gate before it” cannot be satisfied. Risk reduced as possible without running the gate (proven applicable patch, proven polarity flipping mutations, P2 undeclared-failure block asserted and mutation-proven) eliminated. Against (ii) fix-the-four-d all four are Queued and genuinely de BOB-212’s fix direction is an explicit unresolved §11.4.66 OPERATOR decision own test was deliberately written fix-agnostic so as not to prejudge it — change means making that decision on the other behalf, plus four implementations are reviews, and it STILL leaves the hang rc=127 blocking. RECURSION NOTE: the own RED is in-glob and failing, so it is blocker until the mechanism lands — point its already-present marker and clear it. The mechanism is its own fix BOB-222 — WHAT: scripts/pre_build_verification.sh:1196 enum suites with a glob covering EXACTLY directories: “\${PROJECT_ROOT}”/tests/test_*.sh · “\${PROJECT_ROOT}”/tests/pre_build_verification.sh · “\${PROJECT_ROOT}”/tests/pre_build_verification.sh tests/security/ is NOT among Conductor-verified verbatim. So tests/test_gitignore_swallow_is_loud.sh — authored this session with a golden-F proving real secrets stay ignored — ignored by NOTHING. It is a guard that guards and its silence is indistinguishable from THIS IS THE THIRD OCCURRENCE OF THE CLASS. The driver’s OWN comment also records the history: the same defect existed for tests/pre_build/test_*.sh” fixed by adding that directory to the occurred one directory over (tests/home the same way. Now tests/security. Each

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					new glob entry; none addressed why directory is invisible by default. §11.4.250 APPLIES DIRECTLY: three symptoms, primitive. The primitive is a hand-made enumeration that must be edited in line with the tree, whose failure mode is the identical shape as BOB-205's DANGER_ROOTS and BOB-212's .gitignore allowlist — three separate hand-made in this repo, all three measured to have missed something. Adding tests/security-glob would be the fourth instance of NOTE THE GATE ALREADY HAS THE INSTINCT at :1220: it fails when the guard matches NOTHING (“the glob is blind guard catches a TOTALLY blind glob PARTIALLY blind one — the more complex more dangerous case, because a partially glob still reports a healthy count. FIX DIRECTION (§11.4.251 role-as-data-patch) the suite set from the tree — every test test_*.sh — minus a DECLARED §11.4.252 exclusion fence with a justification patch. Then a new test directory cannot be created and a deliberate exclusion is visible and reasoned. If a hand list is kept, the original guard is the same computation, so the derivation must be built either way. ACCEPTANCE: (1) tests/security suites (2) a NEWLY CREATED tests//test_x.sh set up with no hand edit — that is the intent stops the recurrence, and without it to the fourth patch; (3) a RED creating a test directory and asserting it runs; (4) the blind-glob guard is extended to catch blindness, not only total. DISCOVERY (§11.4.238): found by the T042 reading preflight. Not by the automated QA reading and notably not by the two previous

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
172	critical	Fixed (→ Fixed.md)	Bug	—	same class, neither of which asked w happened. BOB-224 — WHAT: a replication of ir (same glob, same skip list, same BOBA_PREBUILD_NESTED=1, same ti measured RAN=38 FAILED=4 SKIPPE the four failures is tests/unit/ test_compute_badges_carrier_match. rc=124 after the FULL 300 seconds not fail, it HANGS. WHY IT IS FILED SEPARATELY AND URGENTLY: it bloc invariant 30, and therefore T042, INDEPENDENTLY of BOB-221. The as BOB-221 that landing an expected-RE mechanism unblocks T042 is FALSE a two of the four failures are REDs, one hang, one is contaminated. Landing t mechanism alone leaves T042 blocke suite. IT MUST NOT BE SILENCED BY DECLARATION. A hang is a §11.4.232 failure, not a verdict: a wedged op ar progressing op both look like “not fir and marking it expected-to-fail woul §11.4.201(6) false-null into permaner That is exactly the abuse the expecte design property (2) exists to prevent, be triaged as its own defect. INVESTI DIRECTION (§11.4.102 first, no guessi is the timeout(1) signature. Determin wedges — a consumer blocked on an producer write-end is the documente here (§11.4.201(12) records that a bac watchdog spawned inside a \$(...) com substitution inherits the pipe write-e early disarm orphans its sleep grand substitution stalls for the FULL budg every verdict and exit code stays COB That signature — full budget, correct matches rc=124 exactly and should b hypothesis tested, not the last. The

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
173	major	Fixed (→ Fixed.md)	Bug	—	countermeasure is documented: redi watchdog subshell fds away from the pipe, or have the probe write to a file assume that is the cause; it is the high hypothesis given the recorded prece ACCEPTANCE: (1) the wedge point is with captured evidence, not inferred suite completes deterministically we budget; (3) a RED reproducing the ha regression cannot silently re-wedge (based assertion, since the failure IS t duration); (4) NOT closed by a declar raising the timeout — raising the bu FILE DATE: the suite is dated 2026-08 hang predates this session. DISCOVER CHANNEL (§11.4.238): found by the E design stream while surveying invar more widely than its brief required – preflight had verified only 3 of 38 sui stated that boundary honestly, which prompted the wider survey. BOB-225 — WHAT, conductor- verified: .gitignore:266 ignores *.docx The §11.4.65 export pipeline GENERA twins — the workable-items export p Issues.docx / Fixed.docx / Issues_Sum Fixed_Summary.docx, and the doc ex produced docs/scripts/ check_cm_lan_routes_authenticated. round 9. Every one of them is untrac construction: they exist on disk, git w see them, and no gate can notice bec absence is silent. WHY THIS IS THE B CLASS, NOT A DUPLICATE OF IT: BOB deny-all glob plus a hand-maintained ALLOWLIST, where new files leak thr gaps in the list. This is a deny-all glob allowlist at all for a file type the proje MANDATES producing. The mechan the false-null is identical — git status

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					so the exporter appears to succeed and an artifact appears to exist. It is filed separately §11.4.214 (distinct-but-similar), with BOB-219 and BOB-219 as siblings. THE TENSION RESOLVE HONESTLY: §11.4.153 mandating a FOUR-format export (HTML + PDF + ...), its document class, and §11.4.65 governing twins generally. So the constitution requires producing an artifact the repository is configured to refuse. One of the two ... and the resolution is an operator decision (§11.4.66): (a) the .docx mandate applies and the glob must carve out generated twins; (b) .docx is deliberately untracked heavy binary derivative regenerable §11.4.77 from its .md, in which case the EXPORTERS should stop producing it, produce it into an explicitly untracked, and the §11.4.153 four-format requirement should be recorded as consciously not met rather than silently unmet. What is not acceptable is the present state: generally ignore it, and let both the mandate and appear satisfied. MEASURED SCOPE (CORRECTED — my first write of this ‘tracked .docx files = 0’, which is FALSE recorded here per §11.4.6 rather than amended): 2 .docx files ARE tracked and exist repo-wide, so 1138 are untracked ignored. (A second correction, also recorded rather than amended: my first correction 344, which counted only the docs/ sub-numeric errors in a row on one item) pattern is that each was measured with a narrower instrument than the claim supported, which is the §11.4.201(7)(part-of-the-instrument failure applies to own reporting.) AND THE TWO SURVEY THE INTERESTING PART: they are documented Status.docx and docs/features/Status_Summary.docx — precisely the

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					§11.4.153 explicitly mandates as a FC export. So the only two DOCX artifacts we see are the two a specific anchor name, they survive not by rule but because they are already in the index. That makes this a condition, not a total one, and the two are the interesting part — they are in position as frontend/e2e/credentials. under BOB-212: alive only because they are already in the index, since git honours over .gitignore for tracked paths. One and-re-add, one file move, and they v silently like any other. So the state is a clean ‘we never track docx’: it is an inconsistent one where two artifacts prove the format IS tracked while 34 not. ACCEPTANCE: (1) the operator does above is taken and recorded; (2) when the exporter and the ignore rule AGF if .docx is not tracked, nothing should generate one into a tracked doc directly carved out, a check that a generated actually trackable, so this cannot record (4) §11.4.153 compliance is either me recorded as an honest gap, never left failing. DISCOVERY CHANNEL (§11.4. by the BOB-102 round-9 remediation when it regenerated its own guide two noticed the .docx could not be added automated QA regime — and the reg see it, which is the point. BOB-227 — WHAT: three of the four a the CM-LAN-ROUTES-AUTHENTICATED build gate are untracked in git. MEAS 2026-08-27 with git ls-files –error-un control-needed against a known-trac scripts/pre_build/lan_route_auth_an UNTRACKED, scripts/pre_build/ check_cm_lan_routes_authenticated. #	Level	Status	Type	Fixed-In Tag(s)	One-line description
					test_check_cm_lan_routes_authenticated. UNTRACKED; only docs/scripts/check_cm_lan_routes_authenticated. TRACKED. IMPACT: (1) losing this check an entire security gate plus 197 assertions round-over-round diff claim across rounds 8 through 14 was ever checked because no committed baseline existed. §11.4.226 evidence-custody failure the chain hit independently; (3) a fresh pre-build gate whose implementation ACCEPTANCE: all four artifacts tracked committed, and a gate asserting that executable a pre-build invariant invoked tracked. Surfaced by the BOB-102 round remediation and independently verified 2026-08-27.
175	minor	Fixed (→ Fixed.md)	Task	—	BOB-228 — WHAT: §11.4.212 makes the README the canonical entry point for project documentation, with no §11.4 doc reachable by no link path. docs/scripts/check_cm_lan_routes_authenticated. reachable from README.md. MEASURE 2026-08-27: grep -c for the guide name README.md returns 0, control-needed a doc README does link (CONTINUATION returns 1), so the instrument is not broken. ACCEPTANCE: README links the guide or transitively, and the doc-link generated docs/scripts/ so the next such guide cannot be orphaned. Surfaced by the BOB-102 round remediation and independently verified 2026-08-27.
176	Critical	Fixed (→ Fixed.md)	Bug	—	BOB-229 — Caught live by scripts/pre_build/check_gitignore_swallow.sh (BOB-212 invariant 56), the very first real-report was wired in. scripts/pre_build/check_cm_qbittorrent_webui_credentials tests/pre_build/test_check_cm_qbittorrent_webui_credentials

177	Minor	Completed (→ Fixed.md)	Task	—	existed on disk (executable, dated 20 and were in DAILY FUNCTIONAL USE pre_build_verification.sh invariant 5 QBITTORRENT-WEBUI-CREDENTIALS every run this session) yet were NEVER by git: git ls-files returned nothing, git -short returned nothing (the exact BOB false-null), git check-ignore confirmed .gitignore:31:credentials was blocking rule. Both files existed ONLY local checkout — a fresh clone, any o environment, or any disk loss would silently lost an entire gate implement its self-validated paired-mutation me zero signal. FIX: added explicit ! nega for both exact paths to .gitignore (ma existing hand-maintained allowlist p lines 34-50), confirmed git status now them as untracked-and-visible, confir scripts/pre_build/check_gitignore_sw now reports OK, confirmed both files functional (bash -n clean, and the me own 8-case paired-mutation self-che 8/8). This item exists to record the inc this project's own §11.4.202 reporting discipline (every discovered defect la tracked item) even though it is being the same session it was found. BOB-230 — BOB-203 added qBitTorre internal/middleware/apitoken.go, wi scoped Gin route group covering the a Python-side Depends(require_api_t counterpart. config/lan_route_auth_p exemption entries for this service's h schedules/theme routes were deliber updated by that fix, since the implem subagent was not certain of scripts/p check_cm_lan_routes_authenticated. analyzer's exact resolution semantics a .Use()-on-a-named-group Gin idiom
