BOB-141 closure evidence — 2026-09-23 (staleness-corrected closure)

Finding

Already fixed in a prior session — CLAUDE.md's Architecture section already contains a full, explicitly-cited BOB-141 correction (lines 140-164) accurately stating the Go profile's single binary binds only 7187, cross-referenced against qBitTorrent-go/Dockerfile:16 and internal/config/config.go:58. The Port Map table entry for 7188 also already carries the accurate BOB-141 annotation. No edit was needed or made — the tracker status was never advanced to reflect the prior fix.

Independent verification (coordinator, from clean shell)

```
$ git status --short CLAUDE.md
(empty)
$ grep -n "BOB-141" CLAUDE.md
142:  service on **7187** only. *(Corrected 2026-08-20,
BOB-141. ...
152:  intent) is an open question tracked as BOB-141; ...
173:| 7188 | webui-bridge (... NOT started by the `qbittorrent-
proxy-go`
      container, see BOB-141) | manual start |
```

Cross-checked against actual source:

```
$ grep -n "CMD\|EXPOSE" qBitTorrent-go/Dockerfile
28:EXPOSE 7187 7188
```

```
29:CMD ["/app/qbittorrent-proxy"]  
$ grep -n "ServerPort" qBitTorrent-go/internal/config/config.go  
67:  ServerPort: getEnvAsInt("MERGE_SERVICE_PORT", ... 7187),
```

Confirms the documented claim matches reality exactly: one binary, one bound port (7187), 7188 declared-but-unbound.

Honest, genuinely new finding surfaced during this investigation (NOT

part of this item's scope — filed as its own follow-up per §11.4.238)
AGENTS.md:55 still carries the SAME stale false claim CLAUDE.md
already corrected: | Go backend | qbittorrent-proxy-go | ... |
7186, 7187, 7188 | Opt-in via --profile go; replaces Python proxy
|. Independently confirmed present. See BOB-232 (new item filed for
this).

Status

Fixed (already landed, tracker sync only). Closed by coordinator.
