BOB-154 closure evidence — 2026-09-23 (staleness-corrected closure)

Finding

Real fix commit 4768b36 "fix(BOB-153,BOB-154): the Go profile now builds, and the test stack is not the stack we ship" already landed — tracker status never advanced.

Independent verification (coordinator, from clean shell, 2026-09-23)

```
$ .venv/bin/pip show starlette | grep Version
Version: 1.6.0
$ podman exec qbittorrent-proxy pip show starlette | grep Version
Version: 1.6.0
```

Host venv and production container now run the IDENTICAL starlette version (1.6.0 == 1.6.0).

```
$ bash scripts/pre_build/check_cm_runtime_deps_parity.sh
compared: 42 container package(s) against 146 host package(s);
host-only dev tooling ignored by design
control needle: seen (findings 0 -> 1)
PASS: CM-RUNTIME-DEPS-PARITY – test stack and production agree (42
packages + interpreter; 0 declared divergence(s))
```

Live gate confirms full parity, control-needle-proven (not a blind zero).

Status

Fixed. Closed by coordinator after independent re-verification.
