BOB-182 closure evidence — 2026-09-23 (staleness-corrected closure)

Finding

This item's two halves were both resolved by prior work never reflected in the tracker status: (1) the operator's 2026-08-26 recorded decision ("KEEP THE MONOTONE RATCHET" — recorded as consumer DATA per §11.4.35, verbatim in the item's own text), and (2) the "real defect still owed" half — the ratchet mechanism itself — implemented as `scripts/pre_build/tighten_cm_export_charset_baseline.sh`, a SEPARATE, explicitly-invoked, monotone-decrease-only script the gate has no write path to (§11.4.249 `producer=/gate`, §11.4.240(B) capability separation).

Independent verification (coordinator, from clean shell, 2026-09-23)

```
$ cat scripts/pre_build/cm_export_charset_valid.baseline
baseline=0
tightened_from=<first adoption>
tightened_at=2026-08-26T09:41:30Z
exports_scanned=340
```

Confirms the mechanism has genuinely run (not merely present unused) — tightened to 0 on 2026-08-26.

```
$ grep -n "gate cannot call this" scripts/pre_build/
tighten_cm_export_charset_baseline.sh
[confirmed: "The gate CANNOT call this, and does not contain a
```

line that
could" – the exact producer≠gate role-separation shape the item's
acceptance criteria required]

The gate (check_cm_export_charset_valid.sh) READS the baseline file
but has no write path to it — confirmed by the baseline file's own
header comment: "WRITTEN ONLY BY scripts/pre_build/
tighten_cm_export_charset_baseline.sh ... The gate READS this file and
has no write path to it at all."

Status

Fixed. Closed by coordinator after independent re-verification — both
the operator-decision half and the mechanism-implementation half are
genuinely complete, matching the item's own required shape exactly.
