BOB-228 closure evidence — 2026-09-23 (staleness-corrected closure)

Finding

Already fixed in a prior session — README.md:317 already links docs/scripts/check_cm_lan_routes_authenticated.md directly, with an explicit (BOB-228) citation, alongside a link to the parent docs/scripts/ directory in the same bullet. No edit was needed or made.

Independent verification (coordinator, from clean shell)

```
$ git status --short README.md
(empty)
$ grep -c "check_cm_lan_routes_authenticated" README.md
1
```

Reachable both directly (named link) and transitively (parent-directory link) per §11.4.212.

Honest, disclosed gap (not fixed, correctly left as-is per the brief's

explicit do-not-over-engineer instruction) The README doc-link generator (scripts/testing/update_readme_doc_links.sh) deliberately does NOT cover docs/scripts/*.md by its own documented design (it owns only the §11.4.57 Tracked-Items row class). The Development-

section list containing this link is hand-maintained. A future docs/scripts/*.md guide would still be transitively reachable via the directory-level link, satisfying §11.4.212's letter, but would not get its own named link automatically. Not expanded into new generator infrastructure for this small item, per instruction.

Status

Fixed (already landed, tracker sync only). Closed by coordinator.
