122	Medium	Completed (→ Fixed.md)	Task	—	BOB-160 — Reported-Via: §11.4.202 directive task on 2026-08-21T19:02:4 Reported-By: AI What (the report, v Independent §11.4.209 review (IMPO found two of the feature’s strongest a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
123	High		Bug	—	checks were never executed by any r tests/ownership/ test_container_writes_owned_files.py §11.4.115 RED-turned-regression-gua FR-011/FR-007, proven via a docker- compose.yml revert mutation — was of tests/integration/ (commit 58d340a an autouse fixture hang) but no runn test.sh, run-all-tests.sh) was ever exte cover tests/ownership/. (2) tests/pre_b test_.sh, the §1.1 paired-mutation met the scripts/pre_build/check_cm_.sh ga was executed by NOTHING — self-rep honestly in commit 04742d7’s own m (‘STILL OPEN (reported, not fixed): te pre_build/ is executed by NOTHING’) tracked as a workable item (a §11.4.1 requirements gap) and never wired i pre_build_verification.sh invariant 3 globbed only tests/unit/test_.sh. Affec file-scope manifest: ci.sh; scripts/ pre_build_verification.sh invariant 30 UNIT-TESTS-EXECUTED) Reproducti context: grep -rn test_container_writes_owned_files ci.s run-all-tests.sh scripts/ returned zero (only docs/specs mentioned the path); scripts/pre_build_verification.sh show 30’s for-loop globbing only tests/unit/t never tests/pre_build/test_.sh. Accept criteria: ci.sh gains a runtime-gated ownership/ stage (skips honestly, rc=0 podman/docker present); scripts/ pre_build_verification.sh invariant 30 covers both tests/unit/test_.sh and tes pre_build/test_*.sh, verified by an ext standalone run of the invariant’s exa reporting a non-zero RAN count that files from both directories.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
		Fixed (→ Fixed.md)			BOB-165 — Reported-Via: §11.4.202 directive bug on 2026-08-21T20:00:08. By: surfaced while capturing closure for BOB-092; diagnosed rather than v around What (the report, verbatim STALE-ABI-AFTER-INTERPRETER-UP defect, not a missing package. The pa installed; its compiled half is built for previous interpreter. That distinction because ‘pip install rpds-py’ style adv appear to succeed while leaving the 3 in place. WHY IT WAS NOT NOTICED stated as fact: the paths that DO work system python3. ci.sh selects an inter through _select_python; the long-run in this session ran .venv/bin/python - and passed. So the automated regime while the DOCUMENTED operator co broken – an 11.4.238-shaped gap, sin escape was found by an agent captur evidence rather than by the regime. WORKAROUND (measured, not theor PYTEST_DISABLE_PLUGIN_AUTOLOA the needed plugins passed explicitly pytest_timeout ...) avoids the schema autoload that drags in jsonschema -> referencing -> rpds. That is a workar the fix: it silences the import path rat repairing the install, and it will surpr person who runs the documented co verbatim. RELATED, and worth decid together rather than twice: BOB-154 rebuilt on 3.12 to match the containe runs CPython 3.12.13 while both syst venv run 3.14.6). There are therefore interpreters in play. Whoever rebuild should confirm rpds resolves for the interpreter afterwards, or this same reappears one directory over. HONES BOUNDARY (11.4.6): this item does N any test is wrong or any product cod

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					The product and the venv-run suites unaffected. What is broken is the doc entry point. Affected scope / file-scope manifest: host user site-packages (~/.python3/site-packages/rpds/); every C documented ‘python3 -m pytest ...’ in any tooling that uses system python3 than .venv/bin/python Reproduction python3 -m pytest tests/e2e/test_live_stack_evidence.py -q –importmode=importlib -> ModuleNotFoundError module named ‘rpds.rpds’, raised during collection via the schemathesis plugin -> jsonschema -> referencing._core -> MEASURED root cause: system python3 but ~/.local/lib/python3/site-packages/rpds.cpython-313-x86_64-linux-gnu.so extension built for 3.13. rpds/init.py ‘from .rpds import *’, and a 313-tagged importable by 3.14, so the submodule does not exist for this interpreter. The CORRECT and unaffected: .venv/lib64/site-packages/rpds/ ships rpds.cpython313-x86_64-linux-gnu.so and ‘.venv/bin/python3 -m pytest tests/unit/ -v –importmode=importlib – the command CLAUDE documents – reaches collection with ModuleNotFoundError, OR CLAUDE.1 corrected to document the supported explicitly. Either way the documented and the working command agree (11 guide that misleads is the documentation equivalent of a PASS-bluff). WORKAROUND EFFECTS MEASURED 2026-08-21 — the not free, and the item previously imported PYTEST_DISABLE_PLUGIN_AUTOLOAD disables ALL plugin autoloader, not just broken one, so anything the suite silently on must be re-enabled by hand: - It breaks pre-existing env-dependent tests in to

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					test_plugin_rutracker.py — TestConfig::test_default_mirrors, test_env_mirrors_override, test_get_env_with_default, test_get_mirrors_from_env_empty, test_get_mirrors_from_env_whitespa need an autoloaded env plugin. PRO caused by any in-flight change: runn OWN copy of that file under identical produces the same 5 failures. - It mal -timeout=60 (set in pyproject.toml) a UNKNOWN ARGUMENT unless -p py is passed explicitly, so pytest.mark.tim silently inert under the naive recipe believed to be time-bounded is not. - autoloader ON and only schemathesis (no:schemathesis), that same file is 96 CONSEQUENCE FOR ANYONE USING WORKAROUND: -p no:schemathesis strictly better than blanket autoloader where it suffices, because it removes broken plugin. Where the blanket for -p pytest_timeout must be added or t inert, and the 5 env-dependent failure recognised as workaround artifacts n filed as defects. That last point is the the workaround manufactures failure exactly like product defects. This doe change the root cause (the venv's rpo cpython-313 ABI tag CPython 3.14 can import) or the fix (rebuild the venv — It documents that the interim recipe radius, so nobody reads a workaroun as a regression. BOB-166 — WHAT. §11.4.19 requires migration to be ATOMIC: a resolving to Fixed.md, DISAPPEARS from Issue (open-only) and APPEARS in Fixed_S (closed-only). 'close' perf atomic migration and REQUIRES –ev 'update –status' sets any §11.4.15 clos value with NO evidence and NO migr and it knows the location, because it a COPY of the real DB: \$ workable-ite –id BOB-065 –db repro.db –status 'Fix Fixed.md)' update: BOB-065 updated (status=Fixed (→ Fixed.md), type=Tas repro.db 'SELECT atm_id,status,curre ...' BOB-065 Fixed (→ Fixed.md) Issu seam that is supposed to be the ONLY path (close, evidence-gated per §11.4 has a parallel unguarded path that re same status while skipping BOTH the requirement and the migration. WHY CAUGHT IT (§11.4.238 coverage-escap Three standing checks stay GREEN on holding the forbidden row, verified o poisoned copy from the repo root so artifact is involved: (1) 'validate' → 'C items, all invariants satisfied' (it has status↔location coherence invariant 'in sync' (DB and Markdown agree — WRONG state; agreement is not corre CM-CLOSURE-SEAM-BINDS CHECK A flags NON-terminal rows whose id ap

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					work commit; these rows are terminated by a row that is outside its predicate by construction. The bug was found by reading a status tally, not by a test in an automated regime — a §11.4.238 disclosure. The bug is a channel escape, which is itself a defect in the code standing to the mis-located rows. ACQ is a bug. (a) ‘update’ REFUSES a terminal status. (b) The names ‘close’ as the correct path, with a bug. (c) §1.1 mutation proving the refusal (rejection). (d) guard must make the mutation pass). (e) ‘validate’ grows a status↔location connection. (f) invariant that FAILS on the forbidden. (g) a golden-bad fixture and a negative condition. (h) legitimately terminal row in Fixed mode. (i) fire — §11.4.201(1)). (c) The 10 existing rows are drained to Fixed with class-matched evidence. (d) per row, or, where a row’s evidence comes from a row produced, honestly re-opened rather than a row migrated on a bare assertion. (d) Horizontal boundary: this closes the update-path. (e) the detection gap; it does not claim evidence. (f) historical status write was evidence-based. (g) NOT CLAIMED. No fix is implemented. (h) filing. The 10 rows are untouched; drain. (i) them is acceptance (c) and each needs evidence, not a bulk UPDATE. BOB-171 — WHAT. Both rate limiters are per-client bucket on the LEFTMOST element. X-Forwarded-For when TRUST_FORWARDED_FOR is enabled. proxy/src/api/rate_limit.py:117-123 (:117-123) the new stdlib limiter in plugins/download_proxy.py (:7186), which was deliberately built to exact policy parity. That element is CLIENT-SUPPLIED. A reverse proxy APPENDS the peer address to the RIGHT of whatever arrived, so the left entry is whatever the client sent — a bug controlled by construction, not by misconfiguration. Consequences with
125	Low	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					on: (1) rotating a forged leftmost value to an unlimited sequence of fresh buckets, and (2) total bypass of the limit the flag is supposed to make MORE accurate; (2) it also defeats the idle-reap cap, since each forged identifier is a distinct key — the bucket map is a moving target, growth surface bounded only by the bucket map, the cap's eviction then discards the bucket map, REAL clients to make room for forged identifiers. EXPLOITABLE AS DEPLOYED TODAY, and why this is Low, not High. TRUST_FORWARDED_FOR defaults OFF at both sites, and the deployed stack runs in network_mode host with no reverse proxy in front (verified across all five compositions) so peer addresses are real client IPs and a collapse occurs. The defect is latent: if at any moment someone puts a proxy in front, the proxy turns the flag on to recover real client addresses, which is exactly the situation the flag is supposed to prevent. The failure mode is therefore 'correctly disabled', not 'currently broken'. PROVED TO BE BROKEN. Raised as MINOR-3 by the independence of the BOB-111 rate-limiter work and the BOB-111 rate-limiter work independently confirmed by the independent agent, which noted it at BOTH source and target, tracked follow-up rather than fixing it, and change. Filed here because neither a proxy nor write access to the tracker. WHY IT CANNOT BE FIXED AT BOTH PORTS. :7186's limiter was built with deliberate policy parity with :7187's, and this parsing. Fixing one and not the other would leave the two surfaces disagreeing on the identity — worse than the shared defect, because it becomes surface-dependent and untestable as a single invariant. ACCIDENTAL (a) Replace leftmost-element parsing with trust-aware resolution at BOTH sites. (b) Replace rightmost-minus-N-trusted-hops, or a proxy CIDR allowlist where only a proxy

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
126	Medium	Fixed (→ Fixed.md)	Bug	—	the allowlist may assert XFF at all — is a deployment-topology decision and recorded, not assumed. (b) A test that rotating leftmost element and asserts key does NOT rotate, per site. (c) Pair mutation: restore leftmost parsing and must FAIL. (d) Negative control (§11.4 with TRUST_FORWARDED_FOR OFF, must be ignored entirely and keying back to the peer address — a guard t honouring XFF when the flag is off w worse defect than the one being fixe boundary: this closes header-forgery does not make per-IP limiting fair be where many real users legitimately s address. NOT CLAIMED. No change n sites still parse leftmost; the flag still BOB-176 — WHAT. <code>_get_enabled_trac</code> download-proxy/src/merge_service/s gates rutracker on RUTRACKER_USE RUTRACKER_PASSWORD only. It neve RUTRACKER_COOKIES. So an operato configured with cookies alone — no no password — never has rutracker all, and the tracker is silently absent fan-out rather than failing visibly. W INCOHERENT WITH THE REST OF TH <code>_search_rutracker</code> treats COOKIES as PREFERRED auth path, not a fallback nnmclub sibling DOES check its own variable. So the same codebase holds positions at once: cookies preferred a search site, cookies ignored at the en gate, and cookies honoured for a sibl WHY IT MATTERS MORE THAN IT LO CLAUDE.md documents a standing o mandate (2026-08-15) that per-tracker cookies files at <code>\${TRACKER_COOKIE_ cookies_<tracker>.txt</code> are auto-loaded as <code><TRACKER>_COOKIES</code> before ever

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					up, restart, install Stage 6 and start.sl and rutracker is named in that set. So SANCTIONED, documented configuration for this tracker produces exactly the gate ignores. An operator who follows documented instructions gets a tracker never runs, with no error to explain MODE. Silent absence, not a visible failure same §11.4.201(6) false-null shape as one layer earlier. BOB-172 fixes a tracker RAN and was REFUSED being reported empty; this is a tracker that never ran the merged result simply has one fewer contributor with nothing to indicate PROVENANCE. Found by the BOB-172 implementing agent while tracing the enablement path to locate the status-defect. Recorded here rather than fixed change: it is a separate defect on a separate seam with its own oracle, and folding have widened BOB-172 past its capture evidence. ACCEPTANCE. (a) The enablement honours RUTRACKER_COOKIES as an independently sufficient credential, not what _search_rutracker already prefers what the nnmclub sibling already does asserting that a cookies-only configuration ENABLES rutracker, driving the real _get_enabled_trackers rather than a mutation Paired §1.1 mutation restoring the usual password-only gate — the test must give NEGATIVE CONTROL (§11.4.201(1)): a configuration with NO credentials at all still leave rutracker DISABLED. A fix enables an unauthenticated tracker instead than the gap, because it produces failures searches instead of absent ones. (e) A other trackers' gates for the same asymmetry rather than fixing only the one that was — three positions in one codebase such nobody has checked them together (§

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					HONEST BOUNDARY. Not verified against cookies-only deployment; read from the BOB-172 agent and recorded on 11.4.194(6). The reading is specific and checkable by whoever takes this should confirm by before relying on it. 127 High Fixed.md) Bug — BOB-177 — WHAT: BOB-172 wired an identical 4-line HTTP guard at five private-tracker fetch sites: download-proxy/src/merge_service/search.py:1638-1658 (rutracker cookie :1390, rutracker credentials :1468, kinozal :1648, nnmclub :1761, iptorrents :1934). Only the rutracker COOKIE password was exercised by tests. EVIDENCE (reviewer preferred): authored mutation R1, per 11.4.194(6) the BOB-172 independent review): deconstruct the BOB-172 wiring ONLY the kinozal guard wiring (search.py:1655-1658) while leaving the rutracker classifier intact left the full merge_service.py at 883 passed, ZERO failures. The suite of tests see four of the five sites. FAILING SCENARIO: refactor drops or subtly breaks the wiring for kinozal, nnmclub, iptorrents, or rutracker without credential. A 403 at that site silently fails to status=empty with error=None -- the BOB-172 signature -- and no test reddens. DIRECTION (reviewer preferred): collapse the five duplicated wirings into one shared function e.g. _check_search_response(tracker_name, status, body) -> bool, so there is ONE test and a sixth site cannot be added unguarded (11.4.251 byte-identical-fork extraction). Alternative: parametrise the guard to test all five sites with per-site stub sessions. ACCEPTANCE: mutating the wiring at any of the five sites reddens at least one test. Proposed: running the same R1 deletion at each site in turn. 128 Medium Fixed (→ Fixed.md) Bug — BOB-178 — WHAT: download-proxy/src/merge_service/search.py:1638-1658 failed a kinozal LOGIN response with

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					login_resp.status not in (200, 301, 302) -- and sets N diagnostic. FAILING SCENARIO: Cloud returns 403 on takelogin.php. The kin reads status=empty, error=None. That BOB-172 signature exactly: a refusal the user as an empty result set. CONT establishing this is an oversight, not a choice: the rutracker and nnmclub lo DO set diagnostics (upstream_captch auth_failure), and the iptorrents logi falls through to the search fetch whe BOB-172's new guard catches it. Kind one leg with neither. FIX DIRECTION: _classify_upstream_http_status(login "")) before the early return, or an auth diag for the status-in-(200,301,302)-b case. ACCEPTANCE: a stubbed 403 on login endpoint produces a non-None the kinozal chip, with a RED captured the pre-fix code first (11.4.115). 12 Fixed (→ Fixed.md) Bug — BOB- WHAT: scripts/generate_markdown_ accepts no arguments. It uncondition PROJECT_ROOT/*.md, docs/ recursively scripts/ recursively (scan loops at line 105/111/116 as of 2026-08-23; they we when this was filed — line numbers the BOB-169 fix, the substance is unc was independently verified by execu invoking the generator with an expli produced an out-of-scope export and requested one), and PROJECT_ROOT from BASH_SOURCE (line 17). A calle writes 'bash scripts/ generate_markdown_exports.sh docs file.md' gets a WHOLE-TREE run with argument silently discarded. WHY IT the caller reasonably believes the run scoped to one file. It was not. In a sha checkout with parallel work streams

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					regenerates any export whose .md is its derived files anywhere in the tree artifacts in other streams' scopes and BOB-068 auto-commit hazard, into a stream's commit. CLASS: a false afford script's interface implies a capability have (11.4.201: an interface must meet claims). FIX DIRECTION: either accept path arguments and honour them (so run to exactly those files), or REFUSE clear message when arguments are present. Silently discarding them is the one option must not remain. ACCEPTANCE: pass either scopes the run to it, or exits naming the unsupported argument. A capturing today's silent-discard behavior (11.4.115). LIVE INSTANCE, MEASUREMENT 2026-08-23 (this is no longer hypothetical). During the BOB-169 fix the conductor the generator with an explicit path to ONE document. The argument was derived and the whole tree was scanned. It generated docs/qa/BOB-174/DESIGN_DECISION.{html,pdf,docx} at 11:50 -- a SIBLING document, while that stream's author was editing the source (.md mtime 12:00) exports were therefore stale on arrival additionally carried the pre-fix BOB-174 defect. The sibling author independently reported them as stale in its own hand having no idea another stream had carried them. SECOND-ORDER LESSON worth learning with this item: the conductor's attempt to fix the blast radius ALSO failed, and failed because 'git status --porcelain \\\ grep -E "(html pdf docx)"' returned only its own files and read docs/qa/BOB-174/ but docs/qa/BOB-174/ is an UNTRACKED DIRECTORY, which porcelain collapses to a single line, so the grep was structurally incapable of seeing the files inside it (a): matched the wrong surface; the conductor

130	High	Fixed (→ Fixed.md)	Bug	—	read as absence). The instrument that it is 'find BOB-183 — The compiled Angular bundle shipped at download-proxy/src/ui/dist/browser still carries the BOB-164 color defect verbatim: scanned 2026-08-23 21 violation nodes on darcula/dark and darcula/light, while the same sources scratch path report 0 across all 16 palette mode combinations. The fix is therefore at the SOURCE layer and absent at the layer, so §11.4.108 layer 2 is NOT closed: users still see the low-contrast dashboard. Compounding facts make this silent regression obvious: dist/ is gitignored, so the diff never shows in a diff; and scripts/install asserts only that the directory EXISTS, that it is newer than the sources it was from, so a stale bundle passes installation unchallenged. Acceptance: install (or equivalent gate) FAILS on a bundle of sources, the bundle is rebuilt, and does BOB-164/axe_contrast_scan.py run against download-proxy/src/ui/dist/frontend/, exits 0 with zero violation nodes and blocking incomplete nodes. BOB-186 — workable-items diff returned and the verdict “DB and Markdown are on a PARTIAL read: invoked with –iss without –fixed it compared 77 Markdown against 184 DB items and called that printing both mismatched counts in the output while 107 DB items were never compared against anything. Measure 2026-08-25: (A) no markdown paths – REFUSES exit 1; (B) –db-only -> honest Markdown compared”; (C) –issues all 0, “in sync (compared 77 Markdown against 184 DB item(s))”. The 11.4.201 null: a partially blind instrument returned
131	—	Fixed (→ Fixed.md)	Bug	—	

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					same quiet green a genuinely-synced returns. IMPACT — CORRECTED 2020 original filing OVERSTATED this. I wrote CHECK 2 of the 11.4.106(F) commit seam exposed. It was NOT. scripts/hooks/does-commit-seam.sh:277 passes BOTH -is -fixed, and a repo-wide sweep found an executable caller that breaks: the two callers (that seam and pre_build_verification.sh:549) both pass paths; the single-path hits are prose of files plus a static-scan test fixture. So was real and latent, never live in this. The corrected claim is: any FUTURE caller would have been silently mis-t PROVENANCE, twice corrected. A sub attributed the false-null to the no-path which actually refuses correctly; the re-measured and relocated it to the path. Then the fixing agent corrected the claim on impact. Both corrections are recorded neither wrong version propagates. Fix (uncommitted, constitution submodule) to upstream tip 7f16739 before edit path. Design: refuse by default (11.4.201(4)) narrow per-tracker comparison PRESENT behind an explicit -partial-scope rather deleted (deleting an existing document capability would be an 11.4.122 silent mirroring how -db-only preserved the Markdown shape. Keyed on MEASURE content, never on flag presence — a 11.4.201(4) zero Fixed rows IS fully accounted for alone and still passes, so flag-keying was traded the false-null for an 11.4.201(4) positive refusal. Resulting property: 'reachable only when the two printed account for each other. RED 4 fail/5 pass GREEN 9/9; paired 1.1 mutation is the revert, killing exactly the 4 defect-gu while the 5 preservation tests stay green

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					now refuses naming “107 item(s) local” - Fixed (supply –fixed)”, the 107 confirmed an independent sqlite3 count (107 Fixed Issues = 185). Incidentally closed an 11.4.201(1) gap: case As refusal had no test anywhere. TestDiffCmd_NoPathsStillRefuses now OPEN: –partial-scope is the agents narrow choice, not an operator decision, and is cheap now and expensive after others consumers adopt it. Other consumers shared submodule were not swept. Closed 2026-08-26. Already fixed 2026-08-25 constitution commit 5979128 (“fix(working items): diff claimed ‘in sync’ while 100 went uncomparared”) - only this tracked stale; no code work was owed. ROOT proven from pre-fix source (11.4.6 - false inference): two individually-reasonable of sync.go. (a) sync.go:852-863, the re “absent in Markdown” pass, carried d.CurrentLocation == "Fixed" && *f "" { continue } - its own comment d intent, suppress false positives for tra caller never supplied, correct in isolat the continue ALSO dropped those row differences, and nothing compensat sync.go:894-897, the verdict, printed and len(dbItems) - the two MISMATCH numbers - then decided purely on di THE VERDICT PRINTED BOTH NUMB NEVER COMPARED THEM. In one lin 11.4.201(1) false-positive guard silent narrowed comparison SCOPE while t stayed scope-unaware, so the fix for positive created its 11.4.201(6) mirror. CLOSED ON BEHAVIOURAL EVIDENCE reading the commit (11.4.226 evidence closure): the shipped binary now RE partial-scope verdict instead of repor sync” - “refusing to report a DB-vs-M verdict that would silently exclude p

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
132	—	Fixed (→ Fixed.md)	Bug	—	DB - the supplied Markdown path(s) account for 122 item(s) located in Fix –fixed”, exit 1; with opt-in –partial-s reports “PARTIAL SCOPE - N differen of 201 DB item(s) were NOT compare The phrase “in sync” is structurally u on a partial read. Regression suite sync_diff_partial_scope_test.go (9 test with the fix. INSTRUMENT VALIDATE WAYS (11.4.201(7)(b)): negative contr regenerating Markdown from a copy “in sync (201 against 201)” exit 0, so t is not stuck-on-FAIL. Needle A (flip B status, Issues leg) detected exit 1. Need (delete BOB-067 on the FIXED leg - th this defect was blind to) detected as “ DB, absent in Markdown” (200 vs 201 Each needle byte-verified applied be running. HONEST GAP (11.4.6): UNKN whether the shipped binaries are byt reproducible from HEAD source - the rebuilt. Both were proven to carry th and behave identically on the real co is the behavioural evidence this close No claim is made about classes diff c compare (revision headers, *_Summa BOB-190 — WHAT: ~/.local/lib/python packages contains binaries built for t cpython-313 ABI while the interpreter 3.14, so pydantic_core and rpds fail t and every test importing FastAPI dies time. CONFIRMED NOT OURS: an unt file fails identically, so this is environ pre-existing. WHY IT MATTERS: CLAI documents ‘python3 -m pytest tests/u –import-mode=importlib’ as the cano invocation and that documented com currently cannot run - docs and host the §11.4.99 misguidance class at the environment layer. scripts/run-tests.s

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					sidesteps it by selecting .venv/bin/pyt working path exists and simply is no docs tell a reader to type. IMPACT: an following CLAUDE.md literally concl suite is broken; worse, an agent coul green by rewriting tests. ACCEPTANC repair the host site-packages so the d command works, or correct CLAUDE TESTING.md to name the venv interp canonical - decided explicitly, not left whoever hits it next. Discovered out- the fail-open triage agent, so per §11. also owes a coverage-escape note: no check asserts the documented test in actually runs.
133	—	Fixed (→ Fixed.md)	Bug	—	BOB-193 — WHAT: in download-prox streaming.py the dedup set is written the yield — seen_hashes.add() / seen_hashes_local.add() execute at :3 ahead of emitting. If format_event ra result is never sent AND its hash is al recorded, so it is permanently dropp Independently verified by the §11.4.2 reviewer at both sites: mid-search th persists across subsequent polls so th never re-emits; at completion the str immediately after, so there is no later either. Results later in the SAME batc yet added and do re-emit on the next is why the observed symptom is part rather than total. WHY IT IS FILED SI the §11.4.252 fail-open pass made thi OBSERVABLE by adding a log line, wh right first move — but observability i repair. The underlying at-most-once : remain, and per §11.4.226(5) a mitiga close the defect it mitigates. THE DEC REAL TRADE, not an oversight to cor moving to add-after-successful-yield least-once, but a DETERMINISTIC ser

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					failure would then retry the same re every poll forever — trading silent lo loop. Options are (a) keep at-most-on the log line as the contract, (b) add-a successful-yield with a bounded per-budget, (c) add-before-yield but remo on emit failure so exactly one retry o ACCEPTANCE: an explicit decision re implemented, and covered by a test t raising emit and asserts the chosen s with a RED observed first per §11.4.1 as MINOR-1 by the independent revie fail-open batch; filed rather than abs the residual defect is not retired along logging that revealed it. BOB-198 — OPERATOR DECISION (2 §11.4.66): REFUSE TO START LAN-B Go profile gets a boot-time guard: bir only, or refuse to start. It does NOT g middleware in this cycle. Rationale c the decision: the profile is opt-in via - was not running when measured, an for development — so closing the exp a guard rather than a parity impleme Options not chosen: write auth midd parity with the Python route set (real it would partially un-defer BOB-101); dev-only with no guard (rejected — p would enforce it, and the next -profil this network silently re-opens 22 rou ACCEPTANCE: a boot-time check that the listener's bind address and refus when it is not loopback, with a paire mutation proving the check FAILs on bind, and a golden-FALSE proving a bind is NOT refused (§11.4.201(1)). So reminder recorded so it is not lost: th covered by BOB-101's parity deferral about ports; folding it in would be a verdict leak. Recorded as consumer I

					this item's scope is settled — and so m "discovers" it as new. 138 critica Fixed.md) Bug — BOB-204 — W internal/jackettapi/credentials.go:234 jackett, port 7189). The DELETE cred handler checks the DB delete, then d errors of BOTH ` _ = envfile.Delete(...)</p> <p>and ` _ = d.Jackett.DeleteIndexer(id)` (</p> <p>then returns an UNCONDITIONAL 20</p> <p>Content. If the .env delete fails, the p</p> <p>credential variables REMAIN ON DIS</p> <p>API reports the credential deleted. Se</p> <p>instance, same file: credentials.go:16</p> <p>returns the error code</p> <p>`env_write_failed_db_rolled_back` w rollback's OWN error is discarded (_ and :171) — the response body assert that was never confirmed, a §11.4 bl API contract itself. SCOPE: 4 combine dangerous capabilities on one path (o access + filesystem mutation + extern effect + irreversible delete) where §1 closed-on-dangerous-combination re 2. Composes §11.4.10 (credentials mu leak — a credential the operator beli deleted, still on disk, IS the leak class §11.4.252. REPRODUCTION: read the the discard is syntactic and uncondit runtime repro drives DELETE with th made unwritable (chmod 0444 or a d level deny) and observes 204 while th persists in .env. WHY IT WAS NOT CA CM-DANGEROUS-COMBINATION-FAI gate (constitution/scripts/gates/ cm_dangerous_combination_fail_clos enumerates .go at line 243 but gates i analyser on *.py at line 537, so Go fal text matchers that key on `catch` — a Go does not have. All 106 .go files are structurally unanalysable while bein as analysed. That blindness is BOB-19

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					is the DEFECT it hid. ACCEPTANCE: (1) discard sites either handle the error; (2) if the handler returns a non-2xx naming the error, the unresolved precondition per §11.4.253; (3) if env_write_failed_db_rolled_back code is emitted when the rollback actually succeeds, then either a distinct honest code; (3) a RED code for the unwritable-.env path and observed. The fix 204, flips GREEN post-fix (§11.4.110) to golden-FALSE fixture proves the new behavior does not refuse the healthy path (§11.4.203). DISCOVERY CHANNEL (§11.4.238): for the agent reading source during the BOB investigation, NOT by the automated agent — this is itself a coverage escape and carries the escape audit. === VERIFICATION COMPLETE 2026-08-26 — BOTH DEFECTS CONFIRMED, RED AUTHORED AND VERIFIED. FAIL === Line numbers re-derived, NOT from the filing: :234-237 DB delete check on error) · :240-244 envfile.Delete error DISCARDED · :249 DeleteIndexer error DISCARDED · :253 unconditional 204. OVERSIGHT — THE GODOC BLESSES the reads: ".env and Jackett deletes are both failures are silently swallowed. The 204 reflects DB success." Any fix MUST delete sentence or it will read as authorizing (§11.4.120 — the doc asserting the old is part of what must be reconciled). MUST END STATE when the .env write fails. GONE, plaintext RUTRACKER_USERNAME RUTRACKER_PASSWORD STILL ON DISK says 204. WORSE THAN THIS ITEM OR FRAMED IT: the ENCRYPTED canonical destroyed while the PLAINTEXT copy UNMANAGED — the system's own repository credential is gone, so nothing will even up. DEFECT (2) IS WORSE THAN FILE CHECKING THE ERROR WOULD NOT LIE. The rollback calls Repo.Upsert(...

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					ifSet(prior.Username), ...); ifSet("") ret repos/credentials.go Upsert maps nil COALESCE(excluded.username_enc, username_enc) = LEAVE UNCHANGE the prior row had an empty field and request set one, the compensating Up returns nil — it SUCCEEDS — and lea value in place. The DB is not rolled b NO error to check, and the API assert anyway. Verified live by the third RE means defect (2) is NOT one-line-ish: repo surface to express "set this field NULL" (delete-and-reinsert the prior tri-state in Upsert). Scope it separatel defect (1). THE RED: qBitTorrent-go/i jackettapi/bob204_failclosed_test.go (NEW file, gofmt clean, deliberately is credentials_test.go so it cannot wider T042 diff). Failure injection is REAL, envfile.mutate writes through <path> the test pre-creates that path as a DIR os.OpenFile returns EISDIR (errno 21 envfile.Delete fails WHILE .env stays identical with the credential in it. Ch chmod deliberately: opening a direct writing fails for root too, whereas a c mechanism would silently no-op und and turn the RED into a FALSE GREE CONTROL NEEDLE inside breakEnvV the real envfile.Delete and t.Fatal's if unexpectedly succeeds — a blind ins cannot produce a conclusion. Measu (all three defect cases) + 1 PASS (the \$ golden-FALSE proving the REDs are n tautological and that the fix must not healthy path). Package-wide exactly 3 all this stream's, zero skips. §11.4.10 l no assertion or message prints a cred VALUE — names and booleans only, 1 fake-not-a-real-*. HONEST BOUNDAR the GREEN half of the flip is OWED, M

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					CLAIMED. The stream was forbidden editing credentials.go, so RED was w GREEN was not. THE FIX, SCOPED (n defect (1) IS one-line-ish twice — rep ` _ =` with checked errors returning 5: the unresolved precondition (env_de jackson_cascade_delete_failed) and D :210-211 GoDoc sentence. Defect (2) is surface change, separate scope. ADJA FINDINGS: (a) credentials.go is strict than its own sibling — indexers.go:2 handles the identical DeleteIndexer e least LOGS it; credentials.go:249 does log. Same package, same call, two sta Repo is a concrete *repos.Credentials interface, so a rollback-FAILURE path driven deterministically — relevant t §11.4.241 if the fix wants that path te The .gitignore false-null that nearly a deliverable is filed separately. SPOT-C the discards this item called benign – CONFIRMED BENIGN: client.go:140,1 resp.Body.Close() closes a body alrea discarded before a retry; runs.go:112 w.Write(...) is post-WriteHeader, sam credentials.go:274. Bonus: runs.go:43 json.Unmarshal(...) is benign but mil a corrupt ErrorsJSON silently reports error_count=0, documented as delibe degradation in its GoDoc. Cosmetic u report, not an integrity issue; record not re-investigated. 139 major Fixed.md) Bug — BOB-205 — W §11.4.252 fail-closed scanner is drive by invariant 39 at scripts/ pre_build_verification.sh:1481-1544 c maintained DANGER_ROOTS list. `cm — 4 files, 947 LOC — is NOT in that li never scanned by any arm. It is the c orchestrator: a shell-exec plus state-r surface, precisely the §11.4.252 dang

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					combination class the gate exists for. FROM BOB-191: BOB-191 is a MATCH root IS scanned; the Go files inside it structurally unanalysable while cour analysed — a false null that prints gr a SCOPE hole (the root is not scanned Different failure shapes, different fix §11.4.214 they are distinct-but-simila deliberately not merged. WHY BOTH root list is hand-maintained, so a nev root joins the tree without joining th §11.4.251 (role-as-data-pack) points a direction — replace the hand-mainta with a declared manifest derived fro source of truth the build uses, so a ro exist without being enumerated. ACC (1) cmd/boba-ctl is scanned — either added to DANGER_ROOTS or by the r replacing it; (2) whichever is chosen, fixture proves a planted fail-open ins boba-ctl is SEEN pre-fix-absent / post (§11.4.115); (3) if the manifest route i fixture proves a NEWLY-ADDED first is picked up without a hand edit — th invariant that stops this recurring; (4) honest-blindness path (§11.4.3 SKIP-v which the gate already implements c unenumerated extensions) is preserv converted into a silent PASS. DISCOV CHANNEL (§11.4.238): found by an a auditing the scanner's own root list o BOB-191 investigation, NOT by the au QA regime — a coverage escape; BOE the escape audit. === VERIFICATION 2026-08-26 — CONFIRMED, with thre corrections and a far larger gap === CONFIRMED: DANGER_ROOTS=(dow proxy/src plugins scripts qBitTorrent frontend/src) at scripts/ pre_build_verification.sh:1511 (cond verified verbatim). Invariant 39 span

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					:1481-1541, skips non-existent roots and calls the gate once per root at :1517, and is invoked from exactly ONE place (:1517) if root absent from that array is scanned for arm. cmd/boba-ctl re-measured: 4 transactions, 947 LOC — the filed numbers have been corrected. CORRECTION 1 (§11.4.6): this item says it is a "shell-exec" surface. There is NO exec.Command in main.go — exec is done away via digital.vasic.containers/pkg (main.go:13). The §11.4.252 threshold is checked several times over (5 of 6 capabilities are checked: :34,36,95-105,121 · untrusted input :21,33,53,110,144,170,302,453-465 · cross-validated :432-440,496-509 · external side effects :239,323,430 · irreversible :36,142) — a specific word was wrong. CORRECTION 2 (§11.4.6): this item's acceptance criteria asserted the gate "already implemented" as an honest SKIP for unenumerated extensions. WRONG. That honest-skip path exists for PYTHON ARM's degradations only. ARM absent from the ext list is a SILENT failure. Filed separately as the LANGUAGE HOLE. CORRECTION 3: the gap is not one root but an ENUMERATION — 266 files in scope / 400 in scope = 66% of the gate-visible first-pass were never scanned. tests/ 324 (excluded-but UNDECLARED) · extension/ 108 · challenges/ 18 · cmd/boba-ctl 4 · front-end+e2e+configs 5 · tools/ 1 (CONCEALS 3 plugin_update_automation.py:189,190 repository ROOT 1 (CONCEALS 1 REASON webui-bridge.py:295). Filed separately as a ROOT-SCOPE item. boba-ctl IS a genuine §11.4.252 surface, but the hole around LATENT: main.go has no ` _ = err`, no err != nil {}, no silent `return nil` to do control-needed against qBitTorrent-gui (config/config.go). It hides nothing live and guarantees a future one lands unseen.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					semantic finding WAS spotted by realMethod()'s default branch — file separately. BOB-205 != BOB-191, AND COMPOUND — measured, one temp needles: go-needle 0 hits, py-needle 1 blindness independently reconfirmed routes only *.py to the AST arm). The boba-ctl scanned DIRECTLY returns "anti-patterns found" over 947 LOC it analyse. THEREFORE: fixing BOB-205 moves the root from never-looked-at LOOKED-AT-AND-FALSELY-GREEN — §11.4.201(6) FALSE-NULL, the WORSE because it then counts as covered. Bo land, and the language hole with the RED: tests/pre_build/test_bob205_danger_roots_scope.sh. (§11.4.245) = METAMORPHIC + INVALID a control needle: two BYTE-IDENTICAL fail-open needles (sha equality assertion runtime, 8d8bd909...), one in a root the DANGER_ROOTS (control), one in cm (probe), scanner driven exactly as in drives it. Identical input, two locations give identical verdicts — matcher/lar version held constant so SCOPE is the variable. Independent of the code under expectation comes from the relation, reading DANGER_ROOTS. Shape (a) c shape (b) included as an explicitly-labeled WEAKER secondary (it would pass on list entry the [[-d]] guard silently skip CONFOUND DELIBERATELY AVOIDED needle is PYTHON, not Go — a Go needle stay unseen post-fix and the RED won't green, which is itself a §11.4.201(1) Fixing BOB-191 will NOT turn this green widening scope will. BLIND-INSTRUMENT GUARD: control needle not found -> c ABORT, never RED. The test parses DANGER_ROOTS from the real driver

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
145	critical		Bug	—	whose docker info output SHAPE differs from the documented one gets a FALSE RESULT produced by a branch the source itself was never measured — precisely the behavior the header promises is impossible. THE PROBLEM (§11.4.245 independence): tests DO cover this path (tests/unit/test_ownership_rootless_detection.sh) but the shim's output shape was authored with SAME documentation as the code. Our code share the unvalidated premise, we cannot discover that the premise is wrong; we confirms the code matches the doc; we confirmed the doc matches Docker. ACCEPTANCE: (1) either the header corrected to match :413's real behavior or is changed to yield unknown when the behavior is unverified — the two must agree (§11.4.21); (2) if the docker branch's premise is validated by REAL docker info output from a real docker daemon, or the branch is honestly measured at the point of USE, not the header; (3) if validation is operator-governed (e.g. on a rootless Docker host), record it as such (§11.4.21) rather than leaving the header promise standing. ALSO VERIFIED: Golden Record recorded so it is not re-investigated: unknown branch is handled IDENTICALLY by both consumers (R3 :519-531, R4 :832-841); both a named SKIP, both return 0, neither refuses), ROOTLESS_VERDICT is cached so both read ONE measurement, and no trap golden-FALSE fixture EXISTS (test_ownership_rootless_detection.sh). drives name=rootless-lookalike inside the path and must NOT read rootless; string guard at :396-411 uses exact field equality (substring). DISCOVERY CHANNEL (§11.4.21) found by the BOB-206 verification string

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
		Fixed (→ Fixed.md)			BOB-212 — WHAT: .gitignore:31 is a c glob <i>credentials</i>, followed by a HAND MAINTAINED per-file allowlist of ! ex (lines 34-50). Any NEW source file wh contains ‘credentials’ (or ‘creds’) is si ignored: git add refuses it and git sta NOTHING. The author gets no signal file simply does not exist as far as the path is concerned. HOW IT SURFACE BOB-204 stream authored a RED test credentials_failclosed_test.go. It vani agent noticed only because it went lo the file it had just written. It renamed bob204_failclosed_test.go to escape b <i>credentials</i> and <i>creds</i>, and the file bec visible. A silent deliverable loss, caug rather than by any gate. INDEPENDE CONFIRMED BY THE CONDUCTOR, co needle proven: git check-ignore -v -n qBitTorrent-go/internal/jackettapi/ credentials_failclosed_test.go -> .gitignore:31:<i>credentials</i> (IGNORED ignore -v -no-index qBitTorrent-go/in jackettapi/zzz_probe_test.go -> no ma ignored) <- the needle: instrument p seeing, so the hit above is real git che -no-index frontend/e2e/credentials.s -> .gitignore:31:<i>credentials</i> (IGNORED -error-unmatch frontend/e2e/creden -> tracked SECOND, LATENT INSTAN frontend/e2e/credentials.spec.ts is m the same rule and survives ONLY bec already tracked (git honours the inde over .gitignore for tracked paths). De add it — an ordinary refactor, a bran operation, a file move — and it disap silently. It is one routine operation av being lost. (For contrast, credential-e dialog.component.spec.ts is genuinel covered by the DIRECTORY rule !from app/jackett/credentials/ at line 43, no

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					file entry.) WHY THIS IS A §11.4.201(1) NULL, NOT MERELY AN INCONVENIENT blind instrument and the clean tree means identical quiet zero. git status showing means BOTH ‘no new files’ AND ‘a new but is invisible’. There is no signal that distinguishes them. The commit path thing every other gate’s output event travel through — cannot see its own WHY IT IS NOT SIMPLY ‘ADD ANOTHER’ that is the mechanism that produced A hand-maintained allowlist against glob has the §11.4.251/§11.4.205 shape future legitimate credential-named source needs a hand edit nobody will remember make, and the failure mode of forgetting SILENT. The same shape as BOB-205’s maintained DANGER_ROOTS: a list that edited in lockstep with the tree, with that notices when it was not. TENSION RESOLVE HONESTLY (§11.4.10 vs §11.4.205) the glob exists for a real reason — §11.4.205 forbids credential material reaching broad deny-all is the conservative-safety Narrowing it carelessly would re-open leak channel. So the fix is NOT ‘delete Candidate directions, operator decision (§11.4.66): (a) narrow the deny to what carries secrets — extensions and directories (.env, secrets/, credentials.json yaml etc) rather than every path containing (b) keep the deny-all but add a GATE that when an untracked file matches an ignore AND lives under a first-party source root has a source extension, so the swallow loud instead of silent; (c) both. (b) alone false-null even if the glob stays exactly and is the smaller change. ACCEPTANCE NEW credential-named source file under party source root either commits nor produces a LOUD refusal naming the

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					blocked it and the remedy — never still RED that creates such a file and asser current silence, flipping to the loud pa (§11.4.115); (3) a golden-FALSE provin secret material (a .env, a key) is STILL the §11.4.201(1) guard, because a fix t credentials to close a false-null is stric than the defect; (4) frontend/e2e/ credentials.spec.ts is made safe by rul than by the accident of already being DISCOVERY CHANNEL (§11.4.238): fo BOB-204 stream when its own deliver disappeared — NOT by the automated and not by any gate. Nothing in the re that an authored file actually became git. Coverage-escape audit: no surface this class at all. === SCOPED AND ME 2026-08-26 — RECOMMENDATION (b IS DISPROVEN NOT MERELY DISFAVO TASK 1a — TRACKED FILES SURVIVIL BEING TRACKED: 3, not 157. A raw s 2795 tracked paths hit 157 ignore rule of those are NEGATIONS (! lines), i.e re-included and safe BY RULE. Report the blast radius would have been a \$1 false positive; the investigating stream this itself. Two independent instrumen ignore -v filtered on non-negated patte bare check-ignore which emits only tr excluded paths) produced IDENTICAL frontend/e2e/credentials.spec.ts — .git credentials* — HAZARD (the known line Playwright spec) 2. tests/security test_jackett_autoconfig_secrets.py — .gitignore:51 secrets — HAZARD, N NAMED IN THIS ITEM WHEN FILE Conductor-verified: matched by :51, c tracked. It is a 113-line SECURITY / PH asserting no credential value reaches body, traceback, or log. Losing it silen remove the test that guards §11.4.10

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					all glob's own purpose. That is the sh instance available: the rule protectin credentials is one refactor away from the test that proves credentials are p submodules/jackett — .gitignore:260 hazard: mode 160000 gitlink, and tha documented as deliberately inert for CodeGraph per §11.4.79). THE MECH DECIDES THE FIX: the directory nega re-includes the DIRECTORY ONLY. A n frontend/src/app/jackett/credentials/ credentials.guard.ts is STILL swallow because <i>credentials</i> contains no slash therefore BASENAME-scoped — the a directory buys nothing for new files. safe files, 124 are held by ONE robust negation (!docs/qa//.log) and 13 by fi hand-maintained per-file entries (currently live, none stale — but ea future silent loss). TASK 1b — ALR SWALLOWED UNTRACKED FILES: . ignored+untracked paths. Two are losses (the tracker-credentials exp and the BOB-124 .txt evidence — fil own item); set_password.py is reco UNKNOWN: provenance and delib NOT called lost work; download-p qbittorrent_creds.json is the POSIT CONTROL — shape-inspected keys- (never values) as [password, usern genuinely credential-bearing, COR ignored. TASK 2 — MEASURED IN A TREE, 10 source paths x 15 secret p baseline (full 316-line file) swallow 0 (a) EXACTLY AS THIS ITEM WOR swallows 0 leaks 3 (a) repaired t those 3 swallows 1 leaks 1 (b) der unchanged + loud gate swallows 0 (a) LEAKS download-proxy/ qbittorrent_creds.json — A REAL CREDENTIAL FILE SITTING IN THE

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					<i>TODAY — because credentials.json match “creds”. It also leaks my_password and service_credentials. Repairing leaves service_credentials: an extended scoped deny cannot cover EXTENSIVE secret files without collapsing back to deny-all it was meant to replace. So this item worded it is DISPROVEN, disfavoured — and I wrote (a) first candidate list, which was wrong. V NEWLY ALLOWS INTO GIT: NOTHING set is EMPTY. No pattern changes, §11.4.10-vs-§11.4.201(1) proof obligation discharges trivially. No variant of make that argument. TASK 3 — THE tests/security/ test_gitignore_swallow_is_loud.sh verified not swallowed BEFORE work joke this item is about). It asserts the acceptance DISJUNCTION (commit OR refuses loudly), so it is FIX-DIR AGNOSTIC and leaves the direction operator decision. The load-bearing assertion is A3: git status is BYTE-1 with and without the file — world (authored) 330ceb52074cdbbe, work made) 330ceb52074cdbbe. That is the null proven directly, not argued. P a tautology: RED_MODE=1 -> exit 0; stand-in -> exit 0; narrowed glob -> and the §1.1 mutation DELETING to exit 2 with 11 leaks caught, which makes the golden-FALSE load-bearing than decorative. Exit 2 is deliberate from exit 1 so a blind harness can it as “defect present”. BEYOND WH ITEM FRAMED: it is not a credential problem. secrets, _password* and *_ EACH already swallowed something *_user* is the broadest — it will match future *_user.txt / .json evidence or fix</i>

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
146	critical	Fixed (→ Fixed.md)	Bug	—	<i>fix must be evaluated against the who not the one glob that surfaced first. == LIVE TRAP HIT, SAME SESSION (2026 The BOB-207 stream chose the natura tests/unit/test_ownership_user_ownea its RED. Conductor-verified: that path SWALLOWED by .gitignore:60 _user. checked before writing (having been w renamed to test_ownership_gid_agree which is clean. That is the SECOND de one session that the deny-all globs wo silently eaten — the first (BOB-204's credentials_failclosed_test.go) was ca after the fact. It also confirms this item “beyond the item” warning empirically the broadest of the four globs and it whose name contains no secret and n credential — merely the word ‘user’ ‘user_owned’, which is the FEATURE NAME (spec 002-user-owned-downlo test named after this feature is a can silent loss. Two hits in one session, fr independent streams, is not a coincid — it is the defect operating normally.</i> BOB-213 — WHAT: the §11.4.252 fail-gate's extension list omits shell entire Measured verbatim by the conductor constitution/scripts/gates/cm_dangerous_combination_fail_clos — exts="{DANGEROUS_COMBO_EXT cc cpp h hpp java cs js ts jsx tsx php r No bash. THE CONSEQUENCE, MEAS scripts/ IS a declared DANGER_ROOT pre_build_verification.sh:1511). It co tracked .sh files and 3 .py files. So 71 files in a root the gate is explicitly po SILENTLY INVISIBLE — while invari driver prints "no fail-open anti-patte first-party source root(s)". Project-wi 198 tracked .sh files (negative contro

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					instrument proven seeing). WHY THE WORST OF THE THREE HOLES: BOB-scope hole (root never looked at). BO-matcher hole (Go enumerated but unanalysable). THIS one is worse than because the root IS declared, IS scanned counted as covered, and 96% of what never examined. The count in the dry summary is an under-count presented census. AND SHELL IS THE HIGHEST LANGUAGE HERE, not the lowest: the orchestration, credential handling, control and gates are shell. start.sh and LOC and is, per CLAUDE.md, THE orchestra Fail-open in shell is also unusually easy — a bare `cmd \    true`, an unchecked +eregion, a swallowed2>/dev/null- a §11.4.67(6) already records one line of exactly this class (a bare exec redirection silencing an interaction for its lifetime). CORRECTION TO PREVIOUSLY-STATED ACCEPTANCE CRITERIA (§11.4.6): I asserted, when filing that "the honest-blindness path (§ SKIP-with-reason, which the gate implements correctly for unenumerated extensions) is preserved". THAT IS gate's honest SKIP-with-reason exists PYTHON ARM's degradations, NOT for absent from the ext list. An unenumerated extension is a SILENT false-null, honest skip. The distinction is lost and I stated it backwards. NOTE ON NUMBERS: the BOB-205 stream cited ext list at :318; the conductor measured :457. Both are correct at their respective a sibling stream (BOB-195 r7) is added editing this file. Re-derive before ACCEPTANCE: (1) either shell is added ext list WITH an arm that can actually analyse it, or unenumerated extensions

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					produce an explicit UNANALYSED ver file – never a silent pass (this i analyser-registry fix BOB-191 need doing it once covers both); (2) th summary reports files ANALYSED, no present, so an under-count cannot as a census; (3) a RED planting a open under scripts/ and asserting (4) golden-FALSE per §11.4.201(1) correctly fail-CLOSED shell guard flagged; §11.4.67's own brace-scope form is the natural fixture. COMP BOB-191 (matcher hole – same primi classify by local shape, never con semantic role; and the analyser-re closes both) and BOB-205 (scope ho §11.4.250 these are three symptoms primitive defect; per §11.4.214 th three items because the fixes diff DISCOVERY CHANNEL (§11.4.238): fou BOB-205 verification stream, confi independently by the conductor. 					pure classifier over self.path/self - tools/...:189 (_download_url): M handles it explicitly (warn + cont write. Handler BOUNDED to (URLErro HTTPError); anything else propagat tools/...:198 (_extract_version): gates nothing – the update decisio HASH compare at :116. (It IS a bareexcept:though, so Ctrl-C is swa separate signal-handling defect, f the README item.) - tools/...:215 (_validate_plugin): False -> :151 BEFORE the write at :165. This IS refusal. Canonical BOB-189 shape. DOES AND DOES NOT CHANGE. The scop itself is UNCHANGED and still real repository root and tools/ are in DANGER_ROOT, verified verbatim at pre_build_verification.sh:1511. Wh is the ARGUMENT: I justified this on "it hides four known defects", justification is wrong. The correc justification is narrower and does on any current hit: webui-bridge.p LIVE, LAN-BOUND HTTP service (see handling request paths, outbound c environment credentials – a surfac belongs in scope on its capabiliti or not it currently contains a def FACT RAISING THE STAKES – 7188 IS REACHABLE. webui-bridge.py:447 bin ThreadingHTTPServer((" ", BRIDGE_PO conductor-verified. The empty host INADDR_ANY, so port 7188 listens o INTERFACES, not loopback. Neither only nor internet-exposed (interne forwarded). No severity is assigne because it is fail-closed – but th argument for putting the root in s live LAN-bound service should be s principle, not after a defect is f

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					it. webui-bridge.py IS LIVE, DECI (§11.4.124 never engages – do NOT superseded): 142 tracked files ref including config/served_ports.yaml credential-leak-audit challenge; d proxy actively probes it via bridg at download-proxy/src/api/__init__ newest of 12 commits is a real fun (6e3da73, 2026-06-14). Critically, served_ports.yaml:66-69 records th webui-bridge is a SEPARATE binary qbittorrent-proxy-go container nev so NOTHING ELSE BINDS 7188 and thi file is the only thing serving tha tools/ RECOMMENDATION (§11.4.224(E IT OUT, DECLARED – exclusion class shipping developer utility". Evide tracked files, neither gitignored; is invoked by NOTHING (control-nee 91 needle hits, 0 negative control referenced only by its own README, docstring, and a tracker note; zer across *.sh/*.yaml/*.py/Makefile ou tools/); its README self-declares invoked by the normal start/stop f functional commit 2026-04-12. Beca FIRST-PARTY, §11.4.224(E) requires exclusion carry a tracked §11.4.19 and the two REAL defects found in tracked regardless of scope, since --update still executes them. Fixed (→ Fixed.md) Bug – B WHAT: cmd/boba-ctl/main.go:498-509 authMethod(). Its default branch (returns remote.AuthSSHKey. A deplo entry whose auth: key is misspelle or set to an unrecognised value th resolves SILENTLY to SSH-key auther rather than refusing to act. WHY §11.4.252 VIOLATION: this is a cre selection decision on a path that

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					performs remote mutation and external effects. §11.4.252 requires a path >=2 dangerous capabilities to FAIL verify every precondition, refuse unverifiable, and name the unresolved precondition. Silently substituting credential MECHANISM for an unread declaration is the textbook fail-on-the operator's intent was not detected the code proceeded anyway using a may not have chosen. WHY NO GATE three independent reasons, each on its own – (a) cmd/boba-ctl is in n DANGER_ROOT (BOB-205); (b) even in files are structurally unanalysable current gate (BOB-191); (c) this is semantic default-branch decision, the two text patterns the non-Python match. It was found by a human-equivalent read, which is precisely the §11.4 class. HONEST QUALIFICATION (§11. boba-ctl/main.go has NO_=err, NO_=nil {}, and NO silentreturn niltoday verified with a control needle against qBitTorrent-go/internal/config/config This finding is the exception, not many; the scope hole around boba-ctl otherwise LATENT (it hides nothing it guarantees a future one lands under ACCEPTANCE: (1) an unrecognised/error value REFUSES with an error naming offending key and its declared value silently defaults; (2) a RED driver auth: and asserting today's silent resolution, flipping to refusal possible golden-FALSE proving every LEGITIMATE value still resolves correctly – a refusal here would break real deployment (§11.4.201(1)). DISCOVERY CHANNEL (§11.4.238): found by the BOB-205 verification stream while confirming

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					qualifies as a §11.4.252 surface. major Fixed (→ Fixed.md) Bug BOB-216 – WHAT: three carrier clas the gate's PRIMARY mode, not only degraded text fallback. Measured a text_rc=1 (both modes report the h COMMENT or DOCSTRING quoting the c anti-pattern is reported as a LIVE default – both spellings; (b) a / or a string constant holdingtry {X {}}is reported as an empty catch, o carrier line. Shape (b), and the C half of shape (a), are LANGUAGE-AG GREPS with NO structural counterpa mode – so there is no parser to be WHY IT MATTERS: the gate's header blanket claim that "A parser is im both by construction". That is OVE now corrected in place, scoped to Try/With shapes where it is actual Everything else – every non-Python and the credential/empty-catch tex even on Python – has no AST arm at the immunity never applied there. §11.4.201(1) false refusal in the mode is materially worse than one fallback nobody expects to be exac refuses provably-healthy code on t gate is trusted on. THE CONTROL N SHARPENS IT (recorded so the next inherits the measurement): a #-COM import does NOT poison the licensi (text=0), because those regexes ar anchored. So the blindness is to S specifically, not to non-code gene distinction is what makes the comm fix tractable for one class and no others. WHY IT WAS NOT FIXED IN T THAT FOUND IT (§11.4.6 honest bound this is the right call): closing t a PER-LANGUAGE comment-and-string

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					across every configured extension. model's failure direction is the U reporting one – a mis-parsed string silently swallows real violations remainder of the file. The same re made the round DECLINE the triple-counter for OVER-1 while ACCEPTING comment strip for OVER-A: the comm ambiguity resolves toward KEEPING (proven by three control needles – violation + comment, # inside a string escaped quote before # – all 1/1), fence counter's ambiguity resolves DROPPING text. Direction of failure difficulty, is the discriminator. full lexer here would import the U reporting failure mode this gate r everywhere else. OPERATOR DECISION (§11.4.66 / §11.4.197): whether to language comment-and-string models consumer call, not a default this pick unilaterally. Options: (a) accept over-reports and DISCLOSE them per (what the round did – a new MODE-IN CARRIERS section now enumerates all (b) build the models per language under-report risk with a fixture per language; (c) narrow the language-greps so they only fire where a string arm exists, trading coverage for precision RELATION TO SIBLINGS (§11.4.214 discussed similar, deliberately not merged): the gate flagging a fail-CLOSED SS a semantic-role miss in the PYTHON is a CARRIER miss (comment/string code) that is MODE-INDEPENDENT. BO language absent from the ext list All three share the primitive §11. in BOB-191: classify by local syntactic shape, never consult semantic role fixes differ, so the items stay separate

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					ACCEPTANCE: (1) the operator decision is taken and recorded; (2) whichever is chosen, each of the three classes of behaviour, fixture proving current behaviour, future change cannot silently alter it if (b) is chosen, a golden-FALSE proof proving a REAL violation adjacent to the carrier is still caught – the underguard, which is the whole risk. D CHANNEL (§11.4.238): found by the round-7 remediation stream while conducting a different finding, NOT by the automatic regime and NOT by the independent auditor that audited the same file in round 150 critical Fixed (→ Fixed.md) BOB-217 – WHAT: tools/plugin_update_automation.py update combines three §11.4.252 dangerous capabilities and is gated by nothing that could stop a hostile payload: - USER INPUT: 14 URLs across four GitHub repositories, THREE of which are third PERSONAL repos, not the official organisation. - MUTATION: writes <name>.py. - DEFERRED CODE EXECUTION: qBittorrent EXECUTES those engine bytes fetched over the network becoming code on the operator's host. The 0 validation is compile(content, "<script>" "exec") at tools/plugin_update_automation.py:213 – verified as the sole compile call. SYNTAX check. A syntactically valid exactly what a hostile payload is. NO signature verification, NO pinning SHA, NO hash allowlist, NO provenance of any kind. §11.4.252 requires a combining >=2 dangerous capabilities CLOSED – verify every precondition when any is unverifiable. This pattern THREE and verifies none of them. §

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					supply-chain clause is the direct counterpart: dependencies are either hash-verified, provenance-attested mirrored through a hash-pinning re-unattested public source is an integrity risk, and here the unattested public becomes EXECUTED CODE. THE SHARPE ABOUT THIS FINDING: the fail-close produced THREE FALSE POSITIVES in file (:189, :198, :215 – all triage POSITIVE, see BOB-214's correction MISSING this, the one genuine danger combination in it. That is the §11.4.250 both-directions failure – false-positive – false-negative – demonstrated inside file. It is the strongest available evidence that the detector classifies by local syntactic shape and never consults the role (the §11.4.250 primitive name BOB-191/BOB-216). REACHABILITY, SURELY HONESTLY (§11.4.6): the script is NOTHING – control-needle-proven (9 hits, 0 negative control) it is reachable only by its own README, its own documentation and a tracker note; zero hits across *.yaml / *.py / Makefile outside its own README self-declares "not involved in normal start/stop flow". Last function commit 2026-04-12. So this is NOT an automated path. It IS reachable by --update, which is exactly what there exists for. Severity is Critical of capability combination, bounded by reachability – not on an active execution path. ACCEPTANCE: (1) plugin source pinned (commit SHA or content hash verified before write; (2) an unverified source REFUSES and names which check (§11.4.252) rather than proceeding with syntax pass; (3) the compile() call documented in-source as a syntax check

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					is NOT a safety gate, so nobody re one; (4) a RED serving a syntactic hostile payload and asserting it i pre-fix-absent / post-fix-present; golden-FALSE proving a legitimate update still succeeds (§11.4.201(1 DISCOVERY CHANNEL (§11.4.238): fou concealed-hits triage stream while establishing that the gate's four this area were false positives. No automated QA regime – and the regi pointed here reported the wrong th 151 major Fixed (→ Fixed.m – BOB-218 – WHAT: tools/README.m "the backup is restored" on valida failure. Conductor-verified: shuti appears EXACTLY ONCE in tools/ plugin_update_automation.py and co FORWARD only – a reverse-direction has ZERO occurrences (grep control proven seeing: needle 2 hits, nega control 0). The plugin write opens "w", which TRUNCATES IMMEDIATELY. OBSERVABLE HARM (the reason this i merely a doc defect): a failure pa through the write leaves a TRUNCAT IMPORTABLE plugin on disk. The ope told the update FAILED and reasona concludes the previous file surviv because the README says it was res was not. The next ./install-plugin the corrupt file into config/qBitt nova3/engines/ and that search eng SILENTLY STOPS WORKING. The .bak n recover DOES exist on disk; the to mentions it and never uses it. Th §11.4 documentation-layer bluff wi downstream consequence: the doc as safety property the code does not and the operator's recovery decisi on that false assertion. SECOND,

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					DIVERGENCE: the README claims JSON stdout; :274 writes it to a FILE (open(args.output, "w")). THIRD, MINOR DEFECT in the same file (rec rather than as its own item because the file and the fix window): _extract_version at ~:198 uses a BAREexcept:, so a Ctrl-C during the sweep is SWALLOWED. That is a sign defect, not a fail-open – the gate this line, but for the wrong reason the silent default return; the read the bare except catching KeyboardInterrupt ACCEPTANCE: (1) either the rollback IMPLEMENTED (restore the .bak on failure the README claim is DELETED – the code must agree (§11.4.6); if impl write to a temp file and rename at rather than truncating in place; (2) stdout-vs-file claim corrected; (3) except narrowed so KeyboardInterrupt propagates; (4) a RED that fails to mid-way and asserts the previous path intact (post-fix) / truncated (pre-REACHABILITY: same as the sibling hand-run only, not in any automated last functional commit 2026-04-12. Major on the harm shape, bounded by reachability. DISCOVERY CHANNEL (found by the concealed-hits triage Not by the automated QA regime. minor Fixed (→ Fixed.md) Bug BOB-220 – WHAT: scripts/ownership_repair.sh:891-895 runs c intending to strip setuid/setgid b live: the chmod RUNS and SUCCEEDS, mode stays 2755. Root cause measure chmod with a 3-DIGIT symbolic-equivalent octal PRESERVES the setgid bit on DIRECTORIES; only a 4-digit form (an explicit g-s clears it. The com

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					:868-884 describes a strip that do occur for directories. EFFECT: be – the surviving setgid bit is not harmful, and no defect is known to from it. This is filed as a §11.4. defect: an in-source comment asser behaviour the code does not perform matters because the next reader wi it, and because a future security-strip written against the same pat silently fail the same way. RELAT BOB-207: the same stream measured repair a new file inherits gid 100 SETGID BIT STILL SET – the two fac compound. If BOB-207 is resolved b the repair (the recommended direct setgid survival becomes moot for t but the misleading comment remains ACCEPTANCE: (1) either the strip i (00755 or g-s) or the comment is c state that directories retain setg and comment must agree; (2) if mad RED asserting mode 2755 -> 0755 on directory, since the current form no-ops; (3) golden-FALSE proving a that SHOULD keep its mode is not g changed. DISCOVERY CHANNEL (§11.4 found by the BOB-207 stream while unrelated behaviour. Not by the au regime. 153 critical Fixed Fixed.md) Bug – BOB-221 – WH scripts/pre_build_verification.sh 30 (CM-BASH-UNIT-TESTS-EXECUTED) e suites by FILESYSTEM GLOB (:1196) fail() on any non-zero exit. It th RUNS untracked suites, and it has of a test that is SUPPOSED to fail MEASURED: tests/pre_build/ test_bob205_danger_roots_scope.sh correctly, because it is a RED tes BOB-205, an unfixed defect. Invari

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					counts that as a gate failure. The T042 verdict is FAIL, and this is three blocking causes. THE STRUCTURE PROBLEM: §11.4.115 and §11.4.224 RED authored FIRST and OBSERVED TO before the fix exists. §11.4.135 RED to persist as the permanent guard. So the discipline mandates failing tests exist in the tree before authoring and fixing – and the block treats their existence as a defect. The constitution correctly makes them refuse the commit. That is a §11.4 seam problem: the gate asserts "no fails" when the invariant it should be "no suite fails UNEXPECTEDLY". WHEN SURFACED NOW: this session authored across parallel streams (BOB-204, BOB-207, BOB-212) – the first time discipline was applied at this volume. Previously REDs were flipped GREEN same round, so the window never stopped gate run. The defect is not new; it is. THE FORBIDDEN RESPONSES (§11.4.248) NOT delete the RED to make the gate NOT weaken invariant 30 to ignore the defect. Do NOT mark the RED skipped without reason. Each converts a real signal to silence. FIX DIRECTION – this is a quarantine mechanism, which the code already specifies and this project is wired: a RED declares its expected status and its tracked item (a header, a naming convention, or a manifest invariant 30 reads that declaration). A declared-RED failure is reported as a fail (not a fail) while an UNDECLARED failure still blocks. Crucially the declaration must EXPIRE or be tracked – §11.4.248 provides a quarantine with a stabilisation delay. The fix is precisely so "expected to fail" can

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					permanent cover. A RED whose item flip GREEN or the gate should FAIL stale declaration. ACCEPTANCE: (1) a declared RED does not block; (2) a UNDECLARED failing suite still blo §11.4.201(1) guard – a fix that ig failures is strictly worse than th (3) a declared RED whose tracked i CLOSED blocks, so declarations can (4) a paired §1.1 mutation removin declaration-check makes the gate a undeclared failure -> gate FAILs. CHANNEL (§11.4.238): found by the readiness preflight, before the en rather than during it. Not by the QA regime – the regime IS the thin would have blocked. === CORRECTED – MY FIX DIRECTION IN THIS ITEM WA AND THE BLOCKER IS WIDER (§11.4.6) CORRECTION 1 – §11.4.248 IS NOT TH MECHANISM. I wrote "this is §11.4. quarantine mechanism, which the co already specifies and this project wired." That is half right and the matters. §11.4.248(A) QUARANTINE t FLAKY tests – its trigger is liter consecutive-run-different-verdict after-red", and its remedy is to M suite to tests/quarantine/ and run blocking suite WITHOUT it "so gree green". §11.4.248(B) PROTECTED-SPE plus a required-reviewer gate on M regression test; it never says a t fail. A RED is DETERMINISTIC and M BE RUN – §11.4.115(F) and §11.4.22 the RED verdict to be PRODUCED as evidence. Excluding it destroys th artifact the discipline mandates. I two would also let a genuinely fla hide behind a RED declaration and What §11.4.248 legitimately suppli

#	Level	Status	Type	Fixed- In Tag(s)	One-line description
					what should be INHERITED rather than INVENTED (§11.4.227), is the SHAPE list + a tracked item + a deadline only-shrink ratchet. CORRECTION 2 – A LANGUAGE-PARITY GAP, NOT A DESIGN CONDUCTOR-verified: the project ALREADY accepted this mechanism on the PYTHON side. pytest.mark.xfail(strict=True) is deliberately used for OPEN defects at test_scaling/test_scaling_envelope.py:9 (BOB-167, documented in tests/scaling/README.md:64) and tests/stress/test_plugin_parsers_stress_chaos.py whose own comments carry the ratchet discipline verbatim ("it stays visible xfailed in every report", "then re xfail"). So "declared expected-failure strict so an unexpected pass fails ALREADY accepted policy in one language BASH side has no equivalent. That gap. CORRECTION 3 – BOB-221 IS NOT SUFFICIENT TO UNBLOCK T042. A full replication of invariant 30 measurement FAILED=4 SKIPPED=2: rc=124 300s test_compute_badges_carrier_match. HANG, not a RED. Blocks independent separately. rc=1 3s test_ownership_gid_agreement.sh BOB-207's RED (a SECOND in-glob RED item assumed one) rc=1 1s test_bob205_danger_roots_scope.sh BOB-205's RED rc=127 9s test_check_cm_lan_routes_authentic CONTAMINATED: a sibling stream was lan_route_auth_analyzer.py during the run (§11.4.119 – the surveying not own that resource and correctly to adjudicate). rc=127 is the §11.4 internal FAIL-bluff signature, not verdict either way. Returned to it stream. ALSO: BOB-204's and BOB-21

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					share tests/security/ test_gitignore_swallow_is_loud.sh, OUTSIDE invariant 30's glob and ex NOTHING (BOB-222) – they do not bl and widening the glob would immedi another blocker. THE DESIGN, RECO two-place declaration + SSoT expir semantics. THREE independent facts before a failure is excused – (1) is listed in scripts/lib/expected_ file the PRODUCING streams do not the suite file itself carries# EXP RED:with the SAME id; (3) <ID> is docs/workable_items.db, FAIL-CLOSE unreadable store or unknown id (\$1 Plus STRICT-XFAIL PARITY: a declar that PASSES blocks, which mechanic the ratchet to shrink in the same the fix. EXIT-CODE CONVENTION REJ MEASURED EVIDENCE – and I had flag promising. The non-{0,1} exit spac ALREADY CLAIMED IN THIS REPO FOR T MEANING: test_gitignore_swallow_is uses exit 2 = "INSTRUMENT BROKEN o LEAK – verdict void", and test_bob205_danger_roots_scope.sh = ABORT (instrument blind). Both w precisely so a blind harness can n read as a verdict. Overloading eit "expected red" would make a genuin INSTRUMENT INDISTINGUISHABLE FROM RED – the gate would swallow exact failure class those codes exist to It also fails acceptance (4) (an i carries no item id) and (3) (nothi check), and it puts the declaratio the PRODUCER, collapsing producer! (\$11.4.240/\$11.4.249). HONEST BOU THE DESIGN (\$11.4.240): it achieve separation by LOCATION and MULTI-P AGREEMENT, not by true CAPABILITY,

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					§11.4.240 prefers. There is no PR/ seam here to enforce capability – Hard Stop #1 removed all CI/PR gate CODEOWNERS half of §11.4.248(B) is STRUCTURALLY UNENFORCEABLE in this What the design buys is that silent failure requires a coherent three-visible in a diff, instead of one line. THE RED: tests/pre_build/test_bob221_expected_red_declarati extracts invariant 30's loop and i predicate VERBATIM FROM THE LIVE G CONTENT MARKER (never line number) them against a hermetic scratch PR – so the logic under test is the g text, not a paraphrase (§11.4.226 Measured RED: 3 of 5 properties un 1. P3 is asserted on the blocking merely on "it blocked" – today eve blocks, so a bare did-it-block che pass FOR THE WRONG REASON and keep the anti-rot half were never built flip proven with the BYTE-IDENTICA against a sandbox carrying the pat all five properties met. Four pair mutations each kill exactly ONE pr one-to-one, no cross-talk. THE PA lines, 4 hunks + one new file scri expected_red.sh,git apply –checkcle APPLIED. Operational note the land must not miss: the table names test_bob205_danger_roots_scope.sh test_ownership_gid_agreement.sh, b carries an# EXPECTED-RED:` marker (verified 0 in both) — without those t additions the gate blocks them with” but the file carries no matching mark is the fail-closed design working as in a bug. SEQUENCING RECOMMENDAT bounded variant of (i) — land the me declaring exactly BOB-205, BOB-207 a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
154	major	Fixed (→ Fixed.md)	Bug	—	item's own suite, add the two missing triage the rc=124 hang as its own item the rc=127 to its owner, THEN run TO HONEST COST, STATED NOT HIDDEN modifies the blocking gate BEFORE the ever run clean, so the mechanism's fix exercise IS the T042 run. The circular unavoidable and IS this item (§11.4.1 whose precondition is produced by the gates): a clean T042 run is impossible RED exists, so “validate the gate before it” cannot be satisfied. Risk reduced as possible without running the gate (pro applicable patch, proven polarity flipping biting mutations, P2 undeclared-failure block asserted and mutation-proven) eliminated. Against (ii) fix-the-four-d all four are Queued and genuinely de BOB-212's fix direction is an explicitly unresolved §11.4.66 OPERATOR decision own test was deliberately written fix agnostic so as not to prejudge it — change means making that decision on the other behalf, plus four implementations and reviews, and it STILL leaves the hang rc=127 blocking. RECURSION NOTE: the own RED is in-glob and failing, so it is blocker until the mechanism lands — point its already-present marker and clear it. The mechanism is its own fix BOB-222 — WHAT: scripts/pre_build_verification.sh:1196 enum suites with a glob covering EXACTLY directories: “\${PROJECT_ROOT}”/tests/test_*.sh · “\${PROJECT_ROOT}”/tests/pre_build_verification.sh · “\${PROJECT_ROOT}”/tests/pre_build_verification.sh tests/security/ is NOT among Conductor-verified verbatim. So tests/test_gitignore_swallow_is_loud.sh — authored this session with a golden-H

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					proving real secrets stay ignored — i by NOTHING. It is a guard that guard and its silence is indistinguishable fr THIS IS THE THIRD OCCURRENCE OF CLASS. The driver's OWN comment a records the history: the same defect c “existed for tests/pre_build/test_*.sh” fixed by adding that directory to the recurred one directory over (tests/ho the same way. Now tests/security. Eac new glob entry; none addressed why directory is invisible by default. §11.4 APPLIES DIRECTLY: three symptoms, primitive. The primitive is a hand-ma enumeration that must be edited in l with the tree, whose failure mode is the identical shape as BOB-205's DANGER_ROOTS and BOB-212's .gitig allowlist — three separate hand-main in this repo, all three measured to ha missed something. Adding tests/secur glob would be the fourth instance of NOTE THE GATE ALREADY HAS THE INSTINCT at :1220: it fails when the g matches NOTHING (“the glob is blind guard catches a TOTALLY blind glob PARTIALLY blind one — the more co more dangerous case, because a part glob still reports a healthy count. FIX DIRECTION (§11.4.251 role-as-data-p the suite set from the tree — every te test_*.sh — minus a DECLARED §11.4 exclusion fence with a justification p Then a new test directory cannot be and a deliberate exclusion is visible a reasoned. If a hand list is kept, the o guard is the same computation, so th derivation must be built either way. ACCEPTANCE: (1) tests/security suites (2) a NEWLY CREATED tests//test_x.sh up with no hand edit — that is the in

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
155	critical	Fixed (→ Fixed.md)	Bug	—	stops the recurrence, and without it t the fourth patch; (3) a RED creating s directory and asserting it runs; (4) th blind-glob guard is extended to catch blindness, not only total. DISCOVERY (§11.4.238): found by the T042 reading preflight. Not by the automated QA r and notably not by the two previous same class, neither of which asked w happened. BOB-224 — WHAT: a replication of in (same glob, same skip list, same BOBA_PREBUILD_NESTED=1, same ti measured RAN=38 FAILED=4 SKIPPE the four failures is tests/unit/ test_compute_badges_carrier_match. rc=124 after the FULL 300 seconds not fail, it HANGS. WHY IT IS FILED SEPARATELY AND URGENTLY: it bloc invariant 30, and therefore T042, INDEPENDENTLY of BOB-221. The as BOB-221 that landing an expected-RE mechanism unblocks T042 is FALSE a two of the four failures are REDs, one hang, one is contaminated. Landing t mechanism alone leaves T042 blocke suite. IT MUST NOT BE SILENCED BY DECLARATION. A hang is a §11.4.232 failure, not a verdict: a wedged op an progressing op both look like “not fir and marking it expected-to-fail woul §11.4.201(6) false-null into permaner That is exactly the abuse the expecte design property (2) exists to prevent, be triaged as its own defect. INVESTI DIRECTION (§11.4.102 first, no guessi is the timeout(1) signature. Determin wedges — a consumer blocked on an producer write-end is the documente here (§11.4.201(12) records that a ba

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
156	major	Fixed (→ Fixed.md)	Bug	—	watchdog spawned inside a \$(...) com substitution inherits the pipe write-e early disarm orphans its sleep grand substitution stalls for the FULL budge every verdict and exit code stays COB That signature — full budget, correct matches rc=124 exactly and should b hypothesis tested, not the last. The countermeasure is documented: redi watchdog subshell fds away from the pipe, or have the probe write to a file assume that is the cause; it is the high hypothesis given the recorded preced ACCEPTANCE: (1) the wedge point is with captured evidence, not inferred suite completes deterministically we budget; (3) a RED reproducing the ha regression cannot silently re-wedge (C based assertion, since the failure IS t duration); (4) NOT closed by a declar raising the timeout — raising the buc FILE DATE: the suite is dated 2026-08 hang predates this session. DISCOVER CHANNEL (§11.4.238): found by the E design stream while surveying invar more widely than its brief required – preflight had verified only 3 of 38 sui stated that boundary honestly, which prompted the wider survey. BOB-225 — WHAT, conductor- verified: .gitignore:266 ignores *.docx The §11.4.65 export pipeline GENERA twins — the workable-items export p Issues.docx / Fixed.docx / Issues_Sum Fixed_Summary.docx, and the doc ex produced docs/scripts/ check_cm_lan_routes_authenticated. round 9. Every one of them is untrac construction: they exist on disk, git w see them, and no gate can notice bec

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					absence is silent. WHY THIS IS THE B CLASS, NOT A DUPLICATE OF IT: BOB deny-all glob plus a hand-maintained ALLOWLIST, where new files leak th gaps in the list. This is a deny-all glob allowlist at all for a file type the proje MANDATES producing. The mechan the false-null is identical — git status so the exporter appears to succeed an artifact appears to exist. It is filed sep §11.4.214 (distinct-but-similar), with and BOB-219 as siblings. THE TENSIO RESOLVE HONESTLY: §11.4.153 man FOUR-format export (HTML + PDF + its document class, and §11.4.65 gove twins generally. So the constitution r producing an artifact the repository configured to refuse. One of the two and the resolution is an operator dec (§11.4.66): (a) the .docx mandate app and the glob must carve out generate twins; (b) .docx is deliberately untrac heavy binary derivative regenerable §11.4.77 from its .md, in which case t EXPORTERS should stop producing it produce it into an explicitly untracke and the §11.4.153 four-format requir should be recorded as consciously no rather than silently unmet. What is M acceptable is the present state: gener ignore it, and let both the mandate a appear satisfied. MEASURED SCOPE (CORRECTED — my first write of this ‘tracked .docx files = 0’, which is FALS recorded here per §11.4.6 rather than amended): 2 .docx files ARE tracked a exist repo-wide, so 1138 are untracke ignored. (A second correction, also re rather than amended: my first correc 344, which counted only the docs/ su numeric errors in a row on one item

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
157	critical		Bug	—	pattern is that each was measured w narrower instrument than the claim supported, which is the §11.4.201(7)(part-of-the-instrument failure applied own reporting.) AND THE TWO SURV THE INTERESTING PART: they are do Status.docx and docs/features/Status_Summary.docx — precisely th §11.4.153 explicitly mandates as a FC export. So the only two DOCX artifact see are the two a specific anchor nam they survive not by rule but because already in the index. That makes this condition, not a total one, and the tw are the interesting part — they are in position as frontend/e2e/credentials. under BOB-212: alive only because th already in the index, since git honour over .gitignore for tracked paths. One and-re-add, one file move, and they v silently like any other. So the state is a clean ‘we never track docx’: it is an inconsistent one where two artifacts prove the format IS tracked while 34 not. ACCEPTANCE: (1) the operator d above is taken and recorded; (2) whi the exporter and the ignore rule AGR if .docx is not tracked, nothing shoul generate one into a tracked doc direc carved out, a check that a generated actually trackable, so this cannot rec (4) §11.4.153 compliance is either me recorded as an honest gap, never left failing. DISCOVERY CHANNEL (§11.4 by the BOB-102 round-9 remediation when it regenerated its own guide tw noticed the .docx could not be added automated QA regime — and the reg see it, which is the point.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
		Fixed (→ Fixed.md)			BOB-227 — WHAT: three of the four artifacts in the CM-LAN-ROUTES-AUTHENTICATED build gate are untracked in git. MEASURED: 2026-08-27 with git ls-files --error-untracked --control-needed against a known-tracked baseline. scripts/pre_build/lan_route_auth_analyzer.sh UNTRACKED, scripts/pre_build/check_cm_lan_routes_authenticated.sh UNTRACKED, tests/pre_build/test_check_cm_lan_routes_authenticated.sh UNTRACKED; only docs/scripts/check_cm_lan_routes_authenticated.sh TRACKED. IMPACT: (1) losing this check is an entire security gate plus 197 assertions. (2) a round-over-round diff claim across rounds 8 through 14 was ever checked because no committed baseline existed. (3) §11.4.226 evidence-custody failure the chain hit independently; (3) a fresh copy of the pre-build gate whose implementation was not ACCEPTANCE: all four artifacts tracked and committed, and a gate asserting that the gate is executable a pre-build invariant invariant was tracked. Surfaced by the BOB-102 round-over-round remediation and independently verified 2026-08-27.
158	Critical	Fixed (→ Fixed.md)	Bug	—	BOB-229 — Caught live by scripts/pre_build/check_gitignore_swallow.sh (BOB-212 invariant 56), the very first real-repo artifact was wired in. scripts/pre_build/check_cm_qbittorrent_webui_credentials.sh tests/pre_build/test_check_cm_qbittorrent_webui_credentials.sh existed on disk (executable, dated 2026-08-27) and were in DAILY FUNCTIONAL USE. scripts/pre_build_verification.sh invariant 56 QBITTORRENT-WEBUI-CREDENTIALS were checked every run this session) yet were NEVER tracked by git: git ls-files returned nothing, git ls-files --short returned nothing (the exact BOB-229

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
159	Minor	Completed (→ Fixed.md)	Task	—	false-null), git check-ignore confirmed .gitignore:31:<i>credentials</i> w blocking rule. Both files existed ONLY local checkout — a fresh clone, any o environment, or any disk loss would silently lost an entire gate implement its self-validated paired-mutation me zero signal. FIX: added explicit ! nega for both exact paths to .gitignore (ma existing hand-maintained allowlist p lines 34-50), confirmed git status now them as untracked-and-visible, confi scripts/pre_build/check_gitignore_sw now reports OK, confirmed both files functional (bash -n clean, and the me own 8-case paired-mutation self-cheo 8/8). This item exists to record the inc this project's own §11.4.202 reporting discipline (every discovered defect la tracked item) even though it is being the same session it was found. BOB-230 — BOB-203 added qBitTorre internal/middleware/apitoken.go, wi scoped Gin route group covering the a Python-side Depends(require_api_t counterpart. config/lan_route_auth_p exemption entries for this service's h schedules/theme routes were deliber updated by that fix, since the imple subagent was not certain of scripts/p check_cm_lan_routes_authenticated. analyzer's exact resolution semantic a .Use()-on-a-named-group Gin idiom not want to guess at a checked-in sec data file. This service is not currently this deployment (-profile go is opt-in already loopback-bound by a prior B operator decision, so this is NOT an a exposure – it is a policy-file accuracy ACCEPTANCE: (1) re-run scripts/pre_

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					check_cm_lan_routes_authenticated. the current tree; (2) if it reports a new for the Go service that is a false positive analyzer not recognizing the .Use()-or group pattern) or a stale-looking known entry for a route that is now actually update config/lan_route_auth_policy. qbittorrent-proxy-go.auth_markers / entries to match reality; (3) if the gateway passes cleanly with no change needed item noting that verification, no edit
